## IT'S SERVICE THAT COUNTS

For complete Service and absolute Security—At  
a Saving in cost call on

**E. D. HARDY & CO.**

INSURANCE for LUMBERMEN

Specialists in LUMBER and WOODWORKING Risks

BOOTH BLDG:

OTTAWA, ONT

A Fast Feed  
Matcher Head

## The SHIMER Fast Feed Expansion Matcher Head

With 12 High Speed Bits

The head is built heavy where the strain is and is devoid of all angles or openings, which lessen the wind resistance and cannot block with shavings. These advantages, combined with the Shimer expansion feature, make a combination that is hard to equal.

The straight knives are long, assuring length of service, while the circular knives can be set back, and the straight knives jointed; in this manner the whole width of the straight knives can be jointed at the one setting.

The circular cutter is then brought to its proper location.

The Cheapest and Best Head on the Market.

Boats and Engines of all kinds

PENETANG, ONT.

# "HAMILTON" LOG CARRIAGES

Above cut shows one of our **No. 2 HEAD BLOCK CARRIAGES** with knee opening 40" from saw line. Note the sturdy compact lines of this carriage, built for heavy but accurate service with weight properly distributed, and the dogs set low on the knees to insure gripping of the smallest logs.

We make these Carriages with pine or oak frames any length—having cast iron, or steel cast head blocks—with knee opening of 33", 40", and 54", and equipped with any number of head blocks of any spacing required. Hand or Steam Set may be used, and carriages are designed for either steam or rope feed. They are built of the best materials obtainable for fast and accurate cutting, are equipped with **NEW DESIGN AXLE RECEDING WORKS** and have carriage wheels 14", 16" or 18" diameter. We have installed hundreds of these carriages in Mills from Coast to Coast, and we guarantee them in material, workmanship, and design to equal any on the market to-day, and to give thorough satisfaction wherever used.

## OUR CARRIAGE CATALOGUE IS YOURS UPON REQUEST

Consult us for any of your saw mill needs, and you will have a Plant looking after your interests that has been in the Sawmill Machinery game for over sixty-five years.

### Don't Gamble on Quality

When values are at higher levels it's foolish to take a chance with a slightly cheaper but inferior article. Your customer will be more exacting—he wants full value for his money.

Our Red and White Pine and Spruce offer good investments for both you and your customer.

# An Announcement

## To The Trade

We desire to announce that, dating from January 1st, 1923, the following change will become effective in our firm:

A. E. Gordon will withdraw his interest and will continue in the lumber business on his own account.

H. J. Terry, A.S. Nicholson, and A. E. Cates will continue the business under the same style as formerly, but subject to a change of name as soon as same can be conveniently arranged.

The firm as newly constituted will assume all the obligations and contracts of the company.

We extend our thanks to the trade for there assistance and courtesy in the past, and offer them our sincerest good wishes for future health, happiness and prosperity.

Our firm as now constituted includes the following personnel who need no introduction to the trade.

H. J. Terry	A. S. Nicholson	A. E. Cates
President	Managing Director	Sec. Treasurer
J. E. Green	R. A. Watt	A. E. Richards
Montreal Sales	Western Sales	Eastern Sales

**"TEN-TEST" SOLID FIBRE BOARD****A Permanent Lumber  
Service**

**A**FTER several years of inactivity we are now cutting on our modern fully equipped mills at Manistique and Little Lake, Upper Michigan. The timber behind these mills was purchased many years ago by the Stack interests from the then "unlimited" supply. Its quality, particularly the maple and birch, is the envy of northern mill men among whom this tract is famous.

This timber will run the mills to full capacity for fifteen to twenty years. The 40,000,000 feet annual cut will run:

15,000,000 ft. maple annually  
6,000,000 ft. birch annually  
2,500,000 ft. beech annually  
2,500,000 ft. elm annually  
900,000 ft. basswood annually  
200,000 ft. ash annually  
6,000,000 ft. hemlock annually  
3,000,000 ft. white pine annually

the balance in Spruce and Tamarack.

Our exceptional service, grades, and manufacture will be maintained.

"Low freight rate shipments by water to Toronto, Montreal, Owen Sound, Port Arthur, and other Great Lakes and St. Lawrence River Ports. Conveniently located also for rail shipments to inland points by C.P.R. or Soo line."

We will be pleased to hear from old friends and from new ones who can understand and appreciate what permanent connection with such a source of supply would mean.

# BUY BRITISH COLUMBIA Red Cedar Shingles

The life of a British Columbia Red Cedar Shingle Roof can almost be gauged by the life of the nail with which the shingle is nailed in place. Judging from available data, the average life of the ordinary steel wire nail, which has been in such common use, is only from seven to twelve years. Some wire nails will last longer, depending upon the condition of exposure, climate and similar features, but considering our climate as a whole, at the end of from seven to twelve years a large percentage of wire nails will have rusted either completely through or so extensively that the first strong wind will complete the work. The shingles that have been held in position by such nails are then free to work down, permitting rains or melting snows to leak through and damage the interior of the structure. Examination will disclose that the fibre of the shingle itself is still in perfect condition, and a leaky roof, in the majority of occasions is due entirely to the use of faulty nails, but the average home owner, placed at such inconvenience, will not stop to reason this out and the poor wooden shingle comes in for more unjust abuse.

There are several kinds of nails which experience has proven will give lasting satisfaction, and the wise dealer will advise his customers of these satisfactory nails. A pure zinc shingle nail meets all the demands of durability required. Its principal drawback is its high cost and a slight tendency to bend under careless driving. Galvanized wire nails theoretically are rust proof, and if the galvanized coating is properly applied, and of sufficient thickness, such a nail will last as long as the shingle it holds in place. The life of this shingle roof, properly applied with these nails then is from 40 to 50 years. Pure iron nails, or the old cut or wrought nails are ideal but difficult to secure. Copper nails also constitute a perfect shingle nail.

## TEN TEST SOLID FIBRE BOARD

The increasing use of Ten Test Solid Fibre Board only serves to prove its superiority as a building material. For interior and exterior work of all kinds it is making good our most optimistic claims. Ten Test Fibre Board is thick and elastic with no resemblance to the thin wall boards being offered the public. Are you profiting by its sale? There is good business waiting for all dealers who carry and recommend it.

Write Today  
for our  
**FREE BOOKLET**

"What, Why and How to Build  
with Ten Test Solid Fibre Board."

Ten Test Solid Fibre Board combines all the most desirable features a building material can possess. It is proof against water, weather, heat cold and sound. For exterior work it lends itself admirably to many artistic Stucco Finishes that will not crack or chip. For interiors it makes solid, flat, sanitary walls. If you are not already familiar with its use, get particulars and place yourself in line for liberal dealer profits.

Manufactured by **MANLEY CHEW, PENETANG, Ontario**

### *Get the Habit*

of always keeping a stock of these New Brunswick White Cedar Shingles in your yard. Their quick turnover and generous profit make them a very desirable product for you to handle.

Quick delivery by rail or water. Get our quotations also on Spruce and Pine Lumber, Lath, Cedar Ties, Etc.

**W. H. MILLER CO., LTD. Campbellton, N.B.**

## SATISFIED CUSTOMERS

In looking over our records for the year that has just passed there is to us a wealth of satisfaction to note the number of REPEAT ORDERS and the letters of appreciation from SATISFIED Customers—customers who have been with us for many years.

The reason for this good feeling towards us is that we take a personal interest in every enquiry and order received, we endeavor to learn the buyer's individual requirements so as to render him the maximum service, together with the best price, the finest quality and delivery when wanted.

To those who have not entrusted us with an order for British Columbia Lumber we would appreciate an opportunity to demonstrate our ability to give satisfactory service.

## A Big Year Lies ahead for the Progressive Dealer

FOR the dealer who buys wisely, obtaining good values and a high standard of quality in the more saleable types of lumber, 1923 will be a big year. In placing his requirements he should not overlook the offerings of G. A. Grier & Sons, Ltd., who specialize in just the class of lumber that will help him most.

As manufacturers and wholesalers, we are in complete control of the product throughout all the stages of manufacture from the standing timber to the finished product. The highest standards are therefore maintained.

## MANUFACTURING COMPANY'S PLANNER KNIVES

ESTABLISHED  
1832

Will cut two or three times as long on hardwood or hard work. The Simonds Welded High Speed Steel Knife is a new knife. Made by a new process and successful in every respect. It has a cutting edge of High Speed Steel Welded to a soft backing. When we say "Welded" we mean just that—not brazed as has heretofore been the method in making Carbon Steel Knives. This knife promises to be a big money and time saver for knife users. There is no change in machines required to run this knife. Simonds High Speed Steel Knife will last from three to five times longer than the ordinary Carbon Steel Thick Knife.

## New Year Sees Expanding Trade in Lumber Line

**Leading Lumbermen Speak Optimistically of Outlook—  
Stocks in Mill Yards are Lower Than Year Ago—  
Winter Cut is Being Increased and Markets  
are Steadily Improving**

January is a month of interest to lumbermen in that it is generally regarded as a convention period and a time for sizing up prospects and production for the coming year. Inventories are finished early in the month and then comes a transition for a few weeks during which alert exponents of the trade generally make it a point to be present at local district, provincial or other gatherings to discuss matters for the coming twelve months and get a line on how their competitors solve the problems that arise from time to time.

The Ontario Retail Lumber Dealers' Association will hold its annual convention in the Prince Edward Hotel, Windsor, Wednesday, Thursday and Friday, January 24th, 25th and 26th, while the members of the Canadian Lumbermen's Association will foregather at the new Mount Royal Hotel, Montreal, on Wednesday and Thursday, January 24th and 25th. At both of these conclaves trade prospects will be reviewed and the situation canvassed so far as the future is concerned.

There is no doubt that the year just closed has been one of greater volume and increased values than the previous twelve months. This especially applies to softwoods for which a splendid demand sprang up owing to the continued structural activity, the home and store building campaigns in the larger centres gaining an impetus such as they had not done in years.

Hardwoods were generally quiet until the fall months when a revival of activity began to be felt and inquiries for stock were, in numerous instances, translated into sales. According to reliable reports received by the "Canada Lumberman" from various centres, there is today much less lumber in the mill yards than there was a year ago. Stocks are in fewer hands and are being shipped rapidly.

What does the horoscope for 1923 reveal? Will prices be higher; how much greater will be production? Will the cost of logging be increased? What will the labor condition be? Will there be a scarcity of stock, etc.? These are vital topics and of particular concern at this juncture.

In order to gain first hand information, the "Canada Lumberman" recently obtained opinions from representative concerns in various parts of Canada. It is well occasionally to let others speak, as those, who are in the forefront, know exactly what the state of affairs is from day to day and week to week.

Here is what leading representatives say:—

### Stocks Lower—Demand More Active

Austin & Nicholson, Chapleau, Ont.—Our opinion is that stocks of lumber in mill yards are much lower at present than they were a year ago and we find the demand much more active. In our own case, although we produced more lumber in 1922 than in 1921 we have not nearly so much to offer today and it looks to us as though there would be some stiffening in prices.

Shevlin-Clarke Co., Fort Frances, Ont.—Our stock of lumber is approximately the same as we had on hand at this time a year ago. We anticipate that our inventory at the close of the year, however, will probably disclose in the neighborhood of seven or eight million less lumber than we had a year ago. Our logging costs we do not anticipate will be any higher this year than they were last year because we are still paying the same rate of wages. Supplies, if any-

thing, are a little bit lower than they were. The year 1923, at least the first six or eight months, should be one of considerable activity and with a good demand for lumber. From our knowledge of lumber in the West, we should say that stocks are very much depleted and this should mean, if anything, a corresponding advance in price.

Mickle, Dymment & Son, Barrie, Ont.—Judging from what we have been able to gather from reliable sources, there will undoubtedly be a shortage of lumber in Ontario next year, that is of stock now in the yards at the mills, and in consequence we anticipate a stiffening in prices. In regard to logging operations this winter, the cost will be greater than last winter on account of the increase of wages to competent bushmen. In our opinion there should be a normal activity in the building industry during 1923 on account of the scarcity of houses throughout the country.

### Cost of Logging is Higher

C. Beck Mfg. Co., Penetanguishene, Ont.—Our position is the same as most mills, and as we understand it, practically everything is sold and stocks are very low. The shipping has been very good, and we have moved more in November of this year than we have for some years. As for next year's conditions; one man's guess is as good as another's. We certainly do not know what will transpire.

Gillies Bros., Braeside, Ont.—We think it is generally true that the stocks of lumber on hand are less, in many cases decidedly less; than they were last year and also that the cost of operation this year is generally higher than last year, which should be reflected in the price of lumber in 1923. As to market conditions for 1923 we have nothing definite in this connection except our hopes that the market conditions will be such as to return us the increased cost of logging this season.

Shepard & Morse Lumber Co. Canada, Limited, Ottawa, Ont.—We have more lumber on hand than at the same time last year, and we believe that condition to prevail in most of the Ottawa Valley yards. Nevertheless, we do think that prices are going to advance some for 1923 and we are looking forward to a reasonable amount of steady business during that year. Lower grade lumber has already advanced in sympathy with the stiffening up of prices on spruce. We do not look for a very material advance in middle grade white pine, notwithstanding the fact that manufacturers should get a little more to cover costs of production which will be greater in the woods for the season of 1922-23 than it was in 1921-22.

### Men are not too Plentiful

Hocken Lumber Co., Espanola, Ont.—We have to-day less than 50% of what we had a year ago of dry stock on hand and our cut for 1923 will be at least two million feet less than 1922. The lumber demand is brisk, labor for the bush is scarce and consequently the costs of operation to-day is much in excess of last season with no immediate signs of it changing. With the bountiful harvest of the past season and the fine weather for building we are now having, coupled with the determination of the public to face all difficulties and the wheels of commerce revolving smoothly, we see no reason to be other than optimistic of the coming season.

A large firm operating in the North Bay district say that stocks in the mill yards are lower than this time last year as a whole in the north and Georgian Bay districts. So far as prices are concerned we may say that we have recently advanced prices, just as other lumber firms have, and it looks as if there may be further advances. May say that we find this true of almost all lines including hardwood, B. C. fir, spruce, etc. The cost of taking out stock this season will be somewhat higher than last on account of men being less plentiful than this time last year.

Victoria Harbor Lumber Co., Toronto, Ont.—Our stock is considerably lower than it was a year ago and a great deal more lumber has moved out of our yard. We find that the demand is steadily increasing and that No. 1 mill culls are now enjoying a larger call.

On the whole we believe stocks are scarce and the outlook for a good steady trade in the next year seems promising.

#### Still in Arrears on Orders

Chew Bros., Midland, Ont.—Our stock of lumber on hand is lower than a year ago, we have substantially increased our shipping force and still are in arrears with our orders. It would appear to us there may be a general shortage, and that a substantial advance in price is in prospect for the coming year. Re logging costs, while wage scale is higher than a year ago and men were scarce during early part of fall, we now have what we require, many lines of supplies cost less than last year and should offset to a great extent increase in cost of labor.

Fesserton Timber Co., Toronto, Ont.—We are pleased to say that we have found a considerable improvement in business this year over 1921, particularly in the latter part of the year. The better stocks seem to be getting very scarce. Spruce has shown a stiffening in price, and good Eastern stocks are becoming scarce, as the New England buyers are buying very heavily in the East, and that market seems to be considerably improved during the last few months. We expect that stocks will be short after the first of the year, and that prices will no doubt be higher. Everything points towards a good year for 1923, and we believe it will be a better year than 1922, as everyone seems optimistic throughout the lumber trade.

#### Coming Year Should be Good

Spanish River Lumber Co., Cutler, Ont.—While we have about fifteen million feet in our mill yards at present, it is all sold and some of it will be moved by rail this winter. We anticipate brisk shipping on the opening of navigation. We cannot inform you as to a possible shortage next spring in any particular width or thickness but we do anticipate a rise in price in all grades of pine. Logging costs will be higher this season than last owing to some advances in wages and less efficiency. Seventy five per cent of the men now in the woods are the dregs of labor of the two provinces. If the pine loggers of Ontario and Quebec do not soon adopt another plan of handling their labor, they will be reduced to a condition where logging will be impossible. In our opinion 1923 should be a pretty fair year for the lumber business, especially the first half.

Keenan Bros., Owen Sound, Ont.—The lumber situation at the present time is looking very well. There has been a lot of first class stock shipped out of this country, more than the consuming public dreams of, and we think there is going to be a shortage along certain lines, especially the first quality stocks. This winter's operations are going to be materially higher than last year's in cost, and it ought to be reflected in the price of lumber. We certainly think it will be and feel that we are on the verge of a few years of pretty fair business. 1923 is going to be a year of more than normal activity.

#### Two Inch Stock May be Scarce

Mageau Lumber Co., Field, Ont.—Our stock at present is being shipped out just as fast as it is in shipping condition; in fact we haven't got more than 1,500,000 feet in the yard now, out of a 4,000,000,000 feet cut, while at this time last year we had about 5,000,000 feet in the yard out of 6,000,000 feet of a cut. This shows that the market is much improved indeed, and there is no doubt in our mind that there will be a shortage in a number of widths and thicknesses by next spring. As to just where that shortage may be, it is difficult to say at this juncture, but it would seem that two inch stock might be scarce. As regards prospects for the next season, it would seem because of higher wages paid out to men in lumber camps that prices now prevailing ought to, at least, remain, and it would not be surprising to see a fair increase in a number of grades, particularly in the culls. Regarding car service, we really have no complaint. The C. N. R. has given us an adequate service.

#### What Quebec Producers Believe

Chaleurs Bay Mills, Restigouche, Que.—As far as our information goes the lumber stocks of all kinds is very much less than it was last year at this time especially the 3" that was shipped quite freely during season to Great Britain and other countries. We also understand that dry boards are scarce and, in fact, all stock in general and are of the opinion that prices will increase considerably during 1923. The cost of logging operations this year will be from 20 to 25% more than last year.

W. & J. Sharples, Limited, Quebec, Que.—We figure the stocks are quite ample for the usual demand that may come up in this district. There was no difficulty in shipping stocks out from here this season as there was sufficient tonnage always available for what we had to ship. Next season we will probably have a normal supply of wood goods but we are not looking for any great advance in

prices on this side. Should there be any, however, the export market will be slow to correspond to European competition.

#### Hopeful Survey of the Situation

Cardinal & Page, Montreal.—We are of the opinion that the stocks of lumber in the mill yards are lower this season than they were a year ago. The car situation, of course, has improved but it is still restricting shipments. Business lately has been fairly good. We think there will be a shortage in certain widths and thicknesses early next year which, in the ordinary way, should mean a higher market. Indications are that next year will be a very busy period and we look for a good market and profitable prices for the greater part of 1923.

#### Will Have to pay More at Mill

Rolland Lumber Co., Montreal.—The situation at the present time is that our stocks to be carried over during the Winter, are about 50% less than last year. On the other hand, our commitments towards the mill this year has been about 35% more than last year. Although our stocks consisted of mostly un-seasoned stock, which is lumber manufactured only during the current year, we have had no difficulty in disposing of it. Our opinion is that next year we will have to pay a little bit more for our lumber at the mill. We feel that this is going to put the lumber business back again, as an advance in prices at the mill, will greatly hinder the advancement and continuance of the present activities being experienced by the lumber business in general. We are afraid that higher quotations at the mill, just when every one is crying for reduction in price of general commodities, will cause sometime during the coming year, an unfortunate lull in the lumber trade; business becoming stagnant, a repetition of cut throat prices will start to appear on the market. Concerning the prospects for 1923, from advanced information received, our opinion is that we would enjoy some handsome business, but, of course, this will be greatly governed by the prices which we have to pay for our mill cuts. We are confident that if the present level of prices are maintained, next year, undoubtedly, would be a very good one.

#### Should be Normal Trade Activity

Roch Julien, Quebec, Que.—If we can base our judgment on the good demands that have come in during the past month and the better facilities of transportation, we would say that there will be a shortage in several lines of Quebec spruce and pine until the new cut comes on the market. We figure that the price will advance gradually as the logging costs for this season will be higher than last year. 1923 should be a year of normal activity in the lumber business.

Fassett Lumber Co., Fassett, Que.—The stock we are carrying at the present time is about 40% less than we were carrying a year ago. We believe that at the present time there is a shortage in a great many sizes in softwoods, and undoubtedly this shortage will be felt more by spring, with a tendency to higher prices. Our logging costs this year are increasing: we estimate around 25% over the preceding year. We look forward to 1923 as a year of normal activity and steady demand.

#### Wise Men in East Getting Ready

Wightman Lumber Co., Montreal, Que.—According to our opinion, all available stocks of Eastern Spruce, which is practically the only class of lumber we handle, are being picked up very rapidly by the various wholesalers. In spite of transportation difficulties, a large volume has moved out of the Eastern Provinces during the past few months. The result is that stocks of lumber in mill yards are about the lowest they have been for a number of years. The fact that prices on most items have shown some advance, is due to stocks getting scarce; and naturally the demand seems to increase, and while we look for firm prices for the coming months, we do not look for any great change. Logging costs no doubt will be slightly higher than in 1921 and 1922, due to increase in wages. On the other hand, supplies are cheaper and the stumpage in some cases has been reduced. Notwithstanding this, we feel that the law of supply and demand will govern prices as a general rule. We are not in position to say what 1923 will bring, but most of the wise men of the East are preparing to supply a normal quantity and hope for a steady demand.

The Fraser Companies, Edmundston, N. B.—In our opinion the stocks in this province are much below what they were last year. The cost of logging is considerably higher than it was in 1921-2. So far as prices are concerned, we do not wish to make any prophecies regarding the future.

J. B. Snowball Co., Limited, Chatham, N. B.—The lumber yards here certainly present a different appearance from what they

# Lumberman Tells of Overseas Trade

## W. Gerard Power Made Study of Conditions in Late Trip and Looks for Bigger Shipments

W. Gerard Power, president of W. & J. Sharples Co., Limited, and president of the Quebec Harbor Commission, who crossed to Europe in the early part of September last to visit the European agencies of his firm's lumber interests in the United Kingdom, returned to Quebec early in December after a three-months' absence abroad during which period he visited all the lumber centres of England, Ireland and Scotland, and also crossed over to France for a short trip. He did not spare himself in his business interests abroad; nevertheless he found time to be present at the banquet tendered at the Canadian Club to Sir Henry Thornton, president of the Canadian National Railways, and was much impressed with the high esteem in which Sir Henry is held by the business and official life in England. Naturally Mr. Power who is a keen observer, made a careful study of the lumber market of the United Kingdom, especially the prospects for the export from Canada of Canadian lumber in the summer of 1923.

In the course of an interview with the Quebec correspondent of the "Canada Lumberman" on his return, Mr. Power said: "I found great improvement generally in all avenues of business in England as well as Scotland and Belfast, where I spent ten days. All engineering departments are well booked with orders and shipping activities are improving. I cannot say as much for the British shipyards. They are all practically idle and I was grieved to see the big plant of Harland & Wolfe practically shut down for want of orders.

### Larger Importations of Lumber

"In regard to the lumber trade, I was filled with a spirit of optimism for its future but I would not like to build much on it for the present, for there are the many questions of the economic life in Europe to adjust and the rate of exchange. However, the bulk of the old British Government war stocks in wood has been disposed of and the general trend points towards larger importations of timber to the whole of the United Kingdom. Values may not be as large as in pre-war days, owing to buyers buying in a small way in quantities. This is an uncertainty that is brought about by the feeling that prices may become lower in the future.

"Meanwhile Canada has to keep constantly in mind Scandinavian competition, and to meet it must keep up a uniformity in manufacture and grading. Swedish and Finnish stocks are good. Russia is also now getting out good stock and there is now considerable wood coming from that country and is likely to increase in volume. Of course, values are not to be compared with those in pre-war days. Canada is not taken into preferable consideration. Inspection, of course, at all times prevails. Poor stuff will only pay a low price, and in order to get a fair figure the goods have got to be A1. As long as we can guarantee a certain grade of wood, we will obtain a fair quotation and a fair share of the business in the United Kingdom. The question is, however, will English prices advance in English markets as well as in American markets? The Canadian trade may be able to secure better prices in the American markets.

"There is no limit to the export possibilities from Scandinavian countries. The biggest shippers whom I met in England of Scandinavian wood informed me that they can go on indefinitely shipping to the United Kingdom at the present price rate they are receiving. They have told me that the cost of labor has gone down in their countries to such an extent as to give them profit on their sales and that the prices, which they are obtaining in the United Kingdom and on the Continent, are yielding to them a fair profit.

"The Finnish mark is going up but this is a setback. The rise in the Finnish mark will help the Canadian trade and likewise help the Swedish trade as the mark of the latter is over par.

### Cheaper Transportation Rates Needed

"I have had friendly conferences with ship owners about the reduction of ocean freight rates on Canadian lumber. We spoke together in a general way but, of course, I took occasion to make it plain that the charges were too high and that it would be a mutual benefit if the freight rates on the export business from Canada were cheaper. At the same time I endeavored to convince them that the present levies were proportionately high and curtailed shipment. I was gratified to hear from the interests with whom I discussed the question, that the cost of operating ships were lowering and that there were prospects of lower rates next year."

Mr. Power went on to tell that he had visited establishments in the United Kingdom where lumber was remanufactured, and after seeing these plants and their equipment, said he was given a

surprise to witness how they could take a three-inch deal and slit it into thin planks. In watching this process is struck him how careful the Canadian trade should be in the choice of lumber exported to England, and would take the liberty to tender the advice that the shipment of Canadian deals to the United Kingdom should be all uniform in size and sound. He said that, owing to the bulk of this lumber going to the other side, it should be carefully inspected and its uniformity particularly noticed as to its thickness and width and freedom from knots. "If this precautionary inspection was taken," said Mr. Power, "it would greatly enhance the value of Canadian lumber and assist the trade with the United Kingdom."

### England Desires No More War

Speaking of political conditions in England, Mr. Power said they had greatly quieted down since the general election. The people appreciate the great work done by Lloyd George during the war and would ever hold him in esteem, but as England wanted peace and an adjustment of trade and industry, they desired the disappearance of the late Prime Minister because they believed that he was likely to immerse the country in another war. The populace of the United Kingdom, regardless of class or age, would not hear of another war and did not believe that Germany wanted any more strife. As for the Near East question, the English public looked for a settlement and had every confidence that Lord Curzon would bring this to a successful issue.

"The greatest cause for alarm in England," said Mr. Power, "is the rate of exchange which is killing business in all countries, and the people feel that when this economic question is settled, the world will return to normal, but not before. "However," said Mr. Power, "I have returned to Canada convinced that Canada's trade relations with the United Kingdom will go on improving, and as for the lumber trade, I do expect that we will do better next year. At the same time we must not forget to cultivate the home and the American market, especially the latter, and should the United States come into a conference with the European powers to settle the complex questions, (as I am led to believe by Americans whom I met abroad,) it will greatly facilitate all economic as well as political questions and help the world to come back to its proper aegis."

### Extend Trade in B.C. Forest Products

L. C. Walker, of the Forests Products Market Extension Bureau, of Vancouver, B. C., is spending some time in Eastern Canada in the interests of trade extension and developing openings for Coast products particularly in fir and hemlock.

Mr. Walker was formerly sales manager of the Whalen Pulp & Paper Co. and previous to that was with the Dominion Creosote & Lumber Co., of Vancouver. The work of Mr. Walker will be largely conducted from the office of the B. C. Lumber Commissioner, 51 Yonge St., Toronto. He is visiting all the railway car shops in Ontario and the eastern provinces to learn their requirements and other data relating to contracts for decking, sheeting, lining, framing and heavy sills.

Mr. Walker is also endeavoring to procure standard specifications in connection with materials that the railways may need for rolling equipment so that western forest products may come in on a fair competitive basis with woods that have been used for a number of years. Mr. Walker will spend some time in Montreal and other eastern cities.

### Equipping Hand Cars With Motive Power

The Sylvester Mfg. Co., Limited, of Lindsay, Ont., report that the outlook for business during the coming year is promising. The firm specialize in a number of lines including hand cars, push cars, motor cars, hand car engines, inspection cars and gasoline and oil pumping engines. The Sylvester hand cars are especially useful in logging operations for transferring men and in doing light hauling. Many lumber firms have expressed their satisfaction with the time and labor-saving features of the Sylvester hand car engines. With the gasoline car it is stated that on ordinary work as high as 54 miles per gallon has been secured while the outfit has a great pulling power.

### Record Stave Saw Order Received

Forty-nine cylinder stave saws in a single order has been received by the Peter Gerlach Co., of Cleveland, Ohio. This is believed to be the largest order ever placed with an American manufacturer for stave saws. Delivery must be completed before June 1st, 1923.

# Montreal Lumbermen Review Work of Year

*Annual Meeting of Association Elects Officers and Hears Interesting Reports—  
Eastern Lumber Trade Enters Upon Coming Months in Good Condition*

D. H. McLennan, Montreal, P.Q.

The members of the Montreal Lumbermen's Association held their annual meeting recently in the Board of Trade Building, Montreal. There was a good attendance and the business consisted of presenting annual reports, the election of officers for the coming year and a general discussion on the more important matters that had arisen during 1922. The trend of trade for the coming season was also talked over and it was generally agreed that the outlook was steadily improving. A larger cut is being taken out in the bush and stocks had been reduced considerably at many distributing and shipping points.

## The President's Annual Address

D. H. McLennan, the president, presided, and in his re-

view of the matter which had come to the attention of the Association during 1922, said:—

It will be remembered that on June 4th, an amendment to the special War Revenue Act was passed, and dealt specially with the Sales Tax in its application to lumber. It stipulated that lumber manufacturers might charge the Sales Tax to the wholesalers or might absorb it as part of the cost, the whole transaction as between wholesaler and manufacturer was one of contract. On 23rd June this year, this provision was somewhat changed and the Law now states that "an Excise Tax of 3% shall be imposed, levied and collected on sales and deliveries by the Canadian manufacturers and of 4% on importations, and that no further Excise Tax shall be payable on re-sale."

"At the last Session of Parliament the Stamp Tax on cheques was increased from two cents on all cheques issued to two cents on cheques not exceeding fifty dollars and two cents on every additional fifty dollars or fraction thereof up to five thousand dollars with a maximum charge of two dollars. The Act in which this change occurs also stipulates that "no person shall transfer a Bill of exchange or promissory note to a bank in such manner as to constitute the bank the holder thereof, or deliver a bill of exchange or promissory note to a bank for collection, unless there is affixed thereto an adhesive stamp or unless there is impressed thereon by means of a die a stamp of the value of, if the amount of money for which the bill or note is drawn or made (1) does not exceed \$50.00, two cents, (2) exceeds \$50.00, for every \$50.00 or fraction thereof two cents." There is a feature in this legislation to which I wish to draw your attention. As you know, drafts drawn on customers are, unfortunately, often returned and it is necessary to draw on them a second time and sometimes that does not suffice. It seems to me that the application of the Stamp Tax on drafts which are returned and no rebate allowed is most unfair and I strongly urge that this matter be taken up with the Government.

Box shooks were originally carried in the lumber tariffs at the ordinary lumber rates, but on November 1st the Railways amended their tariffs so as to provide that lumber rates would not apply on material cleated or glued together, or otherwise made up, but that on such material the Box Shooks minimum weight and rate, plus 4 cents per 100 lbs. would apply. The Board of Railway Commissioners under Order 371 of November 3rd suspended these tariffs pending a hearing on a date to be fixed by the Board but the Railways have disposed of the matter, without a hearing, by withdrawing the proposed regulations and in future carrying Box Shooks, make up, at the ordinary lumber rates.

The Railway Commission in its judgment of August 22nd regarding lumber from Nova Scotia points to New Brunswick and Nova Scotia ports for Export goes very carefully into complaints

regarding the rates on lumber from Bridgewater, N. S., and other stations on the Halifax and Southwestern Branch of the Canadian National Railways, and, as rates were not found to be higher than those generally in effect in Canada, dismissed the complaints.

The subject of rates on lumber from B. C., Pacific coast points to Quebec Central Railway stations is actively in hand with the Railways and a decision satisfactory to the trade is looked for at an early date.

The Quebec Central Railway has issued new tariffs covering through rates on lumber to stations on connecting lines in Canada on a basis similar to that applying from contiguous territory on the Canadian National Railways. Advice has also been received from the Quebec Central Railway to the effect that tariffs covering through rates to points on the Maine Central and Grand Trunk Railways in New England, and also to points on the Central Vermont Railway in the United States will be printed in the course of a few days.

The Question of a general increase in freight rates is referred to in last year's report. An application for a general reduction in freight rates on lumber to the basis in effect prior to September 13th, 1920 was argued before the Board in Ottawa on March 7th and the Board's General Order No. 366 provides for a general reduction of 7½%, effective August 1st.

The following officers for 1923 were elected:—

President, D. H. McLennan, McLennan Lumber Co., Limited, (re-elected).

Vice-president, S. F. Rutherford, (re-elected).

Treasurer, W. K. Grafftey, Montreal Lumber Co., Limited, (re-elected).

Secretary, H. C. Beatty.

Directors, Messrs. A. H. Campbell, Campbell, MacLaurin Lumber Co., Limited; E. H. Lemay; J. MacLaurin, St. Maurice Paper Co., Limited; W. T. Mason, Mason, Gordon & Co., Limited. D. H. McLennan was nominated as the Association's representative on the Board of Trade Council.

## Resolution of Condolence

The following resolution was adopted:—That the members of the Montreal Lumber Association deeply mourn the death of Mr. Alex. MacLaurin, a most prominent and highly respected member, not only of this Association, but of the lumber industry of Canada; that in 1909 and 1910 Mr. MacLaurin was president of this Association, the duties of which office he discharged with faithful integrity; in 1908 and 1910 he was honored by election as member of the Council of Montreal Board of Trade, where he represented this Association most acceptably; that this Association tenders to the family its sincere sympathy in their bereavement.

## Montreal Association Opens an Office

In the report of the inaugural meeting of the Montreal Wholesale Lumber Dealers' Association, which was published in the last edition of the "Canada Lumberman," an error occurred owing to the transposition of some lines.

The directors elected were:—J. S. Bock, (Eagle Lumber Co. Limited); O. Page, (Cardinal & Page); George Church, (Church & Church); C. Villiers, (Canadian General Lumber Co.), and W. A. Filion. E. H. Lemay is president of the Association; J. S. Bock, chairman of the directors; C. Villiers, vice-chairman, and F. H. Devenish, secretary-treasurer. The prospects for the new organization are exceptionally bright and good progress is being made in the work that has already been undertaken. The Association has opened an office at 32B Board of Trade Building, Montreal. The membership is growing, with the attendance at the weekly luncheons maintained.

There is a fascination about fire and especially about the burning of a match for the smallest child. A child uses matches carelessly because they are placed where he or she can readily get them, and because children see matches constantly handled in a careless fashion by their parents.—Deputy Fire Marshal Lewis, Ontario.

# New Year Sees Expanding Trade in Lumber Line

(Continued from page 38)

did a year ago. All the Admiralty stock has now been shipped and a great deal that was not Admiralty, has also been shipped out. There was a steamer here recently loading the last of the Admiralty stock we know of. This vessel left carrying 1,500 standards for Manchester. Our own yard is entirely clear of everything except the sawing of 1922. Stocks are materially reduced and anyone wanting dry stock will find it difficult now to procure. While we have some dry stock on our yard at the moment it is all disposed of going through the planer as fast as we can put it. The operation in the woods is about two thirds of last year and will cost more owing to the higher wages paid to men and the Government stumpage of \$4.00 adds materially to the cost of stock in this direction. Prices have materially advanced and we are looking for quite an improvement in price and demand in 1923, while we do not anticipate business in the lumber line will be up to normal, still it will not be far from it.

## Nova Scotia Mills Sawing English Stock

Dunfield Lumber Co., Halifax, N. S.,—Stocks of lumber on hand in mill and railway yards in this Province are much lower than at this time last year, in fact it can be said that stocks are about exhausted. We have never known stocks to be as nearly cleaned up as at present. Owing to this condition, and the anticipated moderate production, it is quite apparent that certain sizes, such as 2x4, 9 & 10 ft. and 16 ft. & up, 2x6 ft. & up, 2x8, 12, 13, 14 ft. and 2x10, 2x12 Spruce, also 3x7 & wider for the English market, will be very scarce during the winter and early spring. At the same time there will be no surplus of random stocks including log run spruce, pine and hemlock boards. In our opinion 1923 will be a normal year, and there will be a steady demand, with an upward tendency in prices, at least until well along into the year. During 1922 most of our mills down this way were cutting for the American market, but this winter many will be cutting English stock. At this time last year there were large stocks of spruce on hand, but as stated, these have now been liquidated, and, with mills sawing English stock this winter, it is expected there will be no surplus of stocks of spruce available for either English or American markets.

## Shortage in Desirable Sizes

Colin C. Tyrer Co., Halifax, N. S.,—As far as Nova Scotia is concerned, stocks of lumber in the yards are certainly low—in fact, things are pretty well cleaned up in Nova Scotia and we are all glad of it. There is a shortage to-day of all desirable sizes for the American market but the mills are starting to get to work for their winter operations and there will be a fairly even supply of stock for both the English and American markets from now on. Of course, it entirely depends on winter conditions. Prices have shot up rather rapidly during the last two or three weeks; in fact too rapidly to be called a healthy rise. We are inclined to think we are going to see higher prices during the winter but when the spring and summer come along the market will go back again, as all the large mills have immense quantities to saw. If there is any truth in the report, they are planning to get out immense quantities of logs this winter. The English market will not stand any heavy pressure of stock and, even at to-day's prices and on the basis of ruling freight rates there is left only a small profit, nothing at all of a really substantial nature. We certainly expect to see in 1923 a good steady demand for lumber.

## President of N. S. Association Speaks

Rufus E. Dickie, Stewiacke, N. S.,—I am neither a prophet, nor the son of a prophet, so it is pretty hard for me to foretell the future with any degree of certainty, and at the best, whatever I may say, will only be a guess. The situation in Nova Scotia at the present time is that the old stocks of lumber are pretty well cleaned up. You could safely say that by the end of the year all the old stocks of merchantable material will be either sold, or in transit. There will be, however, a small quantity of culls left; but even this quality is rapidly moving out. This will leave us with a fairly clean slate for next year. The cut for this winter and next summer will be considerably larger, perhaps double, what it was last year, but I do not think it will nearly approach the pre-war cut. The steady demand and hand-to-mouth financing, will move the winter cut, about as fast as it is sawn. Next summer's cut will not be large, and will like be cleaned up as fast as delivery can be made. The English market is prepared to take a considerable quantity of deals and scantling, and the American market is, I think, prepared to take all we can produce. I can imagine that the demand will be greater than the supply, more especially, for the wider widths. But this will also apply to narrow sizes as well. If Nova Scotia and New Brunswick were the

only places manufacturing lumber, one would expect to see a runaway market but as other countries are producing besides ourselves, prices will be governed by those obtained from the other competing countries. Operating costs will be higher this next year, as wages have already advanced from five to ten dollars per month, due to scarcity of men. Supplies are also somewhat higher than last year. Looking the situation all over, and speaking for Nova Scotia my opinion is that our activity will not be quite up to normal, and that we will have a steady demand for all we can produce, at profitable prices.

## The Lowest Stocks in Twenty Years

Clarke Bros., Bear River, N. S.,—In respect to lumber stocks on hand at this point, we have never known in the past twenty years stocks so low as they are at this and adjacent point. As to quantity available for spring shipment of 1923, everything, of course depends upon the extent of the bush operations during the coming winter. Practically nothing was done in the way of lumbering here in the winter of 1922 and while there will not be the usual activity which characterized the years prior to 1920, there will be more logging carried on than there was last year. The cut however, will not be more than twenty-five to thirty per cent of normal. Increased activity in New Brunswick has drawn a percentage of our men to that field, but there are still enough for all woods operations which will be done here during the coming season. Our information is, that the stocks of lumber in the American market are not large, with the English demand improving, and while there will be an increase in the cut in the lumber sections of Canada, we have not been able to ascertain that there will be more than sixty per cent of the usual quantity of logs harvested. As many of these will not reach the mills until May or early June, we anticipate a brisk demand in the early part of the season. Wages will be somewhat higher than last year, while camp costs will be a trifle lower. The cost of securing logs these days is materially increased, by the fact that the "stands" of timber are farther removed than heretofore, and with the prices prevailing for the past year, the operator is fortunate who closes the year without loss. Prices must advance under present conditions, if any value is to be received in the way of stumpage.

## Will Appoint Director of Forestry

At the annual meeting of the Canadian Pulp and Paper Association in Montreal on January 26th the members will be asked to appoint a director of forestry research in connection with the Woodlands Section and for that purpose to vote \$10,000. The director will be a forestry and logging engineer, whose duties will include personal consultation and assistance when called upon by any member in meeting problems arising out of forestry or logging operations; keeping in touch with all developments and gathering information for the benefit of members and keeping them informed on progressive measures affecting forestry and logging. The expense will be met by an assessment among the members operating their own woodlands.

The Executive Committee of the Association points out a great deal has been done to increase the efficiency of the manufacturing end, and proceeds. "We are, however, in the operating and forest management end of our business in the same position practically in regard to methods that we were twenty-five or thirty years ago. There are many problems of utilization, measurement of woods, transportation, loss from shrinkage, and driving, which demand solution, and it would greatly cheapen the cost of our logging operations and would lead to a much more intelligent and better handling of our woodlands when, it is considered that, on the woods operations of a company more money is spent each year than on any operations in the mill, and that there is a great lack of technical control in these operations. Studies carefully made by a man with technical training and practical experience would effect very large saving and might suggest new methods of transportation and utilization which would have far-reaching results. We do not hesitate to say that as the forest is the basis of profitable conduct of all our pulp and paper mills, it is far more important that money should be spent on this end of the work than on any other."

It is also proposed to appoint a director of technical research at an expense not to exceed \$30,000 for the first year. The idea is to assist in any research work carried on at the mills.

In the Supreme Court of Ottawa recently the hearing of the suit of the Attorney General of Ontario against J. R. Booth, Limited, of Ottawa, was postponed. The action was the outcome of a long-standing dispute in connection with certain timber limits in the Madawaska District. The chief point in dispute is whether a certain boundary line should follow the natural contour of a river. As the province of Ontario owns the river rights, the department of the Attorney General has been called upon to settle the matter,

# Windsor Will be Mecca For Retail Lumbermen

*Details For Annual Convention on January 24-26 are Complete—Splendid Programme Arranged With Live Topics—Social Features to be Attractive*

The forthcoming convention of the Ontario Retail Lumber Dealers' Association will be held at the Prince Edward Hotel, Windsor, on Wednesday, Thursday and Friday January 24th, 25th and 26th. It is understood, from present prospects, that this session will be the most interesting and outstanding of any that has taken place in the history of the organization. The proceedings will be business from the word "go" and a large number of important subjects will be dealt with. Instead of set formal speeches, practical talks on various topics of particular interest, will be introduced and led by representatives who have given considerable thought to each subject. Suggestions have been sent in to have a lot of problems thrashed out on the convention floor and the detailed programme is now being arranged.

The assembly this year is in some respect a unique one in that it will convene for three days. There will be something doing all the time, with abundance of variety, and members are requested to bring their ladies. A special programme of entertainment is prepared for them and they will also be guests at the dinner-dance that evening.

S. Herath, of Ojibway, Ont., has been appointed chairman of the Entertainment Committee, and any members who require any further information or assistance in reserving rooms should write to him, c/o Prince Edward Hotel, Windsor, Ont. It is advisable that all reservations should be made in advance as the attendance promises to be unusually large.

The manager of the Prince Edward Hotel will certainly look after the comfort and welfare of those who attend, and this palatial new hotel has for the use of the delegates 48 rooms with double beds, suitable for two persons, at \$5.00 per day; 48 rooms with double beds, suitable for two persons, at \$6.00 per day; 48 rooms with twin beds, suitable for two persons, at \$6.00 per day.

"Jim." Scofield, president of the Association, is on the move and declares that local dealers are up on their toes and will leave nothing undone to make the event outstanding and enjoyable in every respect.

Some matters which are to come up for discussion and consideration are a suitable trade mark for the Association; formation of a shippers' rating bureau, the standardization of lumber sizes and grades, proper cost accounting system, trade ethics, accident prevention, relation between wholesaler, retailer and consumer, the house plan service recently inaugurated by the Association, apprentices for planing mills, etc.

There will be exhibits by various firms during the progress of the gathering. Quite a number of applications have been received for space and it is believed this will be an attractive rendezvous during the convention. It will be the first business show ever held in connection with the Association.

The tentative programme has been arranged as follows:—

## Wednesday, January 24

10 A.M. Arrival and registration of delegates.

2 P.M. Open session. Welcome by the mayor; minutes of previous meeting; annual address of President Scofield; reports of secretary-treasurer and standing committee.

Discussion of trade ethics among retailers.

Explanation of the new house plan service by president Scofield.

Discussion on the best methods of financing new dwellings. How building operations can be encouraged by loan associations or other means.

As it is felt that many of the members would like to visit the neighboring city of Detroit, which is just over the river, on Wednesday evening, this night has been left free. The delegates can go across and take in the City of the Striats and its attractions.

## Thursday, January 25

10 A.M. Discussion on proper cost accounting system; stopping leaks in the business, led by W. R. Bogart, Chatham, Ont.

Discussion,—Apprentices for planing mills; the best system and how to secure them.

Discussion,—Shippers' rating bureau, how conducted, service rendered, etc.

Discussion,—Proposed adoption of a trade mark for the Association.

2 P.M.—Discussion on standard sizes and grades.

Discussion on relation between wholesaler, retailer and consumer.

Discussion on accident prevention, led by George H. Arnott, of the Windsor Lumber Co., Windsor.

Discussion on fire prevention in plants, which will be led by Clarence DeFields, chief of the Windsor Fire Department.

Evening,—Annual banquet and dinner-dance. This will be quite informal and some innovation will be introduced. Douglas Malloch, of Chicago, "the lumberman poet," will give one of his bright, entertaining "turns," and Jack Miner, of Kingsville, Ont., the well-known bird naturalist who makes all sorts of wild fowl eat out of his hand, will also give a short talk.

## Friday, January 26

10 A.M. Election of officers, passing resolutions, selection of next place of meeting, unfinished business, etc.

It may be interesting to point out in connection with the address to be given by Fire Chief DeFields, of Windsor, that, in the organization of employees in factories to fight fires, he divides the men into a chief and groups known as box runners, telephone runners, branch

New Prince Edward Hotel, Windsor, Ont.

men, hydrant patrol men and wheel men, and gives definite instructions to each of these. He believes that a staff of employees carefully trained in their duties, can put out any fire in a plant or yard promptly and effectively. Confusion will be avoided and every man will have his own particular job.

## Preservation of Timbers is Facilitated

Fence-posts, barn sills, house-frames and other timbers placed without preservative treatment in contact with the soil give only a few years of service and the cost of replacing such timbers is increasing every year. Material is harder to obtain and labour is more expensive. In order that the longest possible service may be obtained from woods used for such purposes the Forest Products Laboratories of Canada, Forestry Branch, Department of the Interior, have for several years investigated such preservative methods as could be practiced by the farmer and builder. Treatment of timber in open tanks, that is to say, without pressure, is the only feasible plan for a man who is not in the wood-preservation business. A creosote oil suitable for such a process was formerly so expensive as to make preservation of timbers appear a questionable economy, but owing to representations made by the Laboratories to the manufacturers of creosote oil in Canada it is now possible to get oil of the correct specification at a reasonable price. The preservation of farm and other timbers is, therefore, no longer a matter of enterprise but of ordinary business sense. Particulars as to the oil or process may be had from the Forest Products Laboratories of Canada, McGill University, Montreal.

## He Supervised Some Fast Lumber Handling

C. F. Richards, Sarnia, Ont.

C. F. Richards who has just completed his twentieth year of service with the Laidlaw Belton Lumber Co., is well known in the industry. For a long period he has been superintendent of the company's activities in Sarnia where he is a live citizen, being a former member of the city council and also a past master of Tuscan Lodge No. 437, A.F. & A.M. It was in 1902 that Mr. Richards got a job with the R. Laidlaw Lumber Co. in Sarnia as an office boy and he is still considerably under the two-score years mark. He reports that the past season has been a busy one with the company. On December 3rd the steamer "James Dempsey" with a cargo of 739,564 feet aboard arrived and at 7.30 the next morning "the boys" started to unload her.

The job was completed at 9.30 the following morning, consisting of 10½ hours working time. To accomplish this it was necessary to unload on an average of 70,457 feet every hour or 1,174 feet every minute. When it is considered that each piece had to be handled twice in the unloading and the docking and that one-third of the cargo which was in the hold, had to be handled three times, this performance probably constitutes a record.

In a recent letter to the "Canada Lumberman" Mr. Richards states—"We are going to give you the record on the Steamer Dempsey's season to Sarnia. She delivered seven cargoes here, the balance of the time being spent in carrying shipments to Tonawanda, Chicago and Milwaukee. Seven cargoes unloaded at Sarnia contained 6,141,817 feet and the total time of unloading these seven cargoes was 115¾ hours. The average amount handled per hour was, therefore, 52,946 feet. On the last cargo, however, 70,457 feet was handled each hour, or as already stated, 1,174 feet per minute. In addition to consignments arriving by the steamer Dempsey, there have been a large number of other boats discharge forest products in Sarnia during 1922, and the unloading of all of them was accomplished under the direction of Mr. Richards.

## What Shippers Rating Bureau Would Do

In a recent letter to the "Canada Lumberman" on the formation and operation of a shippers' rating bureau, which project will be considered at the convention of the O.R.L.D.A. in Windsor, Ont., on January 24-26., F. M. Torrence, of the Xenia, Ohio, secretary of Retail Lumber Dealers, says: The idea of establishing a shippers' rating bureau which would give retailers a record of repute of shippers as to character of stock, promptness of delivery, policy in making adjustments, etc., very similar to the Blue Book and Red Book ratings which the shipper now has on the retailer, is a theory I have been working on for a number of years. While I believe that we are gradually devising means of overcoming all of the obstacles which present themselves in our efforts to work out a system for this service, I must confess that the matter is still largely in a theoretical stage.

The idea of a shippers' rating bureau and the tentative plan I have mapped out for handling it was endorsed at our state convention at Cincinnati a year ago. Mr. S. S. King, of the Dayton Lumber & Mfg. Co., was made chairman of the shippers' rating bureau committee and was sent to Washington to discuss the legality of the project with the department of justice.

Before going to Washington, Mr. King sent an account of the proposed plan to some fifty shippers and secured the hearty endorsement of the plan from all of them. As you can readily understand, the greatest benefit from such a bureau will be that derived by the better class of shippers who will thus be better able to meet the competition of the "fly-by-night" concerns, who, operating without either financial or moral responsibility, are now giving the legitimate shipper very vigorous competition and are exacting heavy toll from our industry.

Some retailers are patronizing these "fly-by-night" shippers, continuously; lured by flowery stationery and apparently attractive price quotations, but even the most conservative retailers, fall for these fellows once in a while. During the past year, while I was working

on this very project, my own yard was stung on three separate cars of lumber; orders for which we were tempted to place with unknown concerns, that is, we thought we knew them and their letterheads looked reassuring. As the prices advanced we never heard anything more from them regarding our orders.

This type of fellow is adding, in the aggregate, millions of dollars to the cost of building in this country by his present game of betting on the rise and fall of the lumber market and never paying his bets when he loses.

After our association endorsed the project, the National Retail Lumber Dealers' Association appointed a committee on the subject and Mr. S. S. King, our chairman, was also made the chairman of that committee.

Mr. King gave a report of the project at the recent Cleveland convention of that association where it received an enthusiastic endorsement and the association was instructed to proceed, but the method and manner of procedure is still being sought by the National's committee.

## Wholesale Lumber Dealers Make Merry

Of a jovial holiday character was the monthly meeting of the Wholesale Lumber Dealers' Association which was held at the Albany Club, Toronto, on December 15. No business was transacted, and, as usual at the December gathering, unique features were introduced and everybody had a splendid time. Instead of chairman H. J. Terry, secretary Boulton and others gracing the head table, the members of the Entertainment Committee occupied the seats of honor. L. D. Barclay was master of ceremonies and was ably assisted by K. M. Brown and A. K. Johnson.

The proceedings were enlivened by burlesque reports from the membership committee, presented by A. K. Johnson, finance by Alfred Read, transportation by Hugh A. Rose and arbitration by K. M. Brown. Some directors and officers of the organization came in for good natured jibes, and in defence they retorted in kind, with the result that the flow of wit and humor kept up for an hour and was thoroughly enjoyed.

L. D. Barclay gave an imitation of "a talk" by Douglas Malloch, of Chicago, the well-known lumberman poet, who has appeared before the Toronto wholesalers, and the stunt was done so well that it aroused appreciative applause. Mr. Barclay concluded with a facetious poem.

After this Lou Skuce, the well-known cartoonist, entertained the members with some clever drawings and cartoons. His work was rapid and thoroughly appreciated. A number of the well-known exponents of the trade were caricatured and screened in a clever manner. At the close a hearty vote of thanks was tendered the Entertainment Committee and Mr. Skuce for the delightful evening.

The annual meeting of the Wholesale Lumber Dealers' Association for the election of officers, presentation of reports for the past year and other matters will be held on Monday January 12th. It is expected that there will be a large attendance.

## Newsy Briefs from Muskoka District

The Malloney Lumber Co., Sundridge, Ont., expect to have about 700 M ft. of hardwood and 100 M ft. of Hemlock for their 1923 cut. They will commence sawing early in the year and draw their lumber to Sundridge.

The Wood Sales Co., of Toronto & Sundridge will change operation this season. Instead of drawing their logs to their mill at Sundridge they have put up a heavy portable mill on their limits which they will run this winter, drawing the lumber as it is sawn to Sundridge.

Wilson Bros., of Sundridge, Ont., will have a stock of about 500 M feet composed of hardwood and softwood.

The Muskoka Wood Mfg. Co., of Huntsville, have closed their mill for this season. On account of getting started late in the season they ran day and night for several weeks. They are planning a big stock for next seasons' cut.

The labor situation has become easier during the last few weeks, the hunting season being over and men getting back from the West. The farmers are through with their fall work and this has made a change, with the result that bush operators are going forward with a swing.

Forestry is not a question mainly for lumbermen. It is not even a question mainly for foresters. Because no one can get along without the forest, it is a question for every one of us. Our future supply of forest products is by far the greatest and most puzzling economic problem now before the people of Canada.

## New Wholesale Lumber Firm Formed

P. L. Canfield, wholesale lumber dealer of Woodstock, Ont., and A. G. Wilmot, of Toronto, who for the past year and a half has been eastern representative of the Otis-Staples Lumber Co., Wy-cliffe, B. C., and the East Kootenay Lumber Co., of Jaffray, B. C., have joined forces and formed the firm of Canfield-Wilmot Limited, with head office in Woodstock. A charter has been applied for and the new organization will specialize on all lines of B. C. forest products.

Mr. Canfield, who was born and brought up in Woodstock, has been engaged in the wholesale lumber line for the past five years and has met with a large measure of success.

Mr. Wilmot has been identified with the industry for some fifteen years and has a wide acquaintance with the trade, being associated for a long period with the East Kootenay Lumber Co. Previous to coming to Toronto he resided in British Columbia and is thoroughly familiar with coast and mountain wood products. Mr. Wilmot will take up his residence in Woodstock, and many friends will wish the new firm of Canfield-Wilmot Limited every success and prosperity.

R. G. Chesbro, of Toronto, will represent the Otis-Staples Lumber Co. in the East, selling to wholesalers only, and in this service succeeds Mr. Wilmot.

## Will Loosen Up Money For Building

Over in New York State in the county of Westchester, which is adjacent to New York City, a number of prominent bankers, realtors and building supply men got together recently and formed a Mortgage Purchase Corporation. Westchester County like lots of other communities was away behind in its building programme and money seemed to be getting even tighter. In fact, many retail lumber merchants complained of their having to take second mortgages in order to secure payment for materials furnished for home building.

These mortgages usually run for several years and money that might otherwise be used more profitably was tied up. The mortgages were generally held against persons in whom the lumber merchant had every confidence. The Mortgage Purchase Corporation will buy mortgages held by responsible merchants and a reasonable discount will be deducted for the accommodation. It is estimated that profits derived from interest and discounts will be in excess of 20% per annum. The common stock of the new enterprise is held by the officers and directors and the preferred stock is sold bearing 7%. After the preferred and common stock have each received 7%, dividends go one-third on the preferred and two-thirds on the common.

## The Timber Trade Market Overseas

Canadian Trade Commissioner J. E. Ray, in a recent report from Manchester, Eng., to the Department of Trade and Commerce, Ottawa, says:—

Although several of the leading importers of timber have been interviewed, they had very little information to give that would be of interest to Canadian shippers. Apparently, the firmness of the market this year has tended to restore confidence, which should have a beneficial effect upon Canadian exports of timber. Comparatively small consignments have found their way recently to Manchester. During the last few days about 1,150 standards of spruce have arrived from St. John, and several hundred standards of pine from Montreal. There has also been landed a small shipment of white pine from Quebec.

White wood has not appreciated in value so much as red wood, but better prices are being commanded, and a further advance is likely. For a long time, white wood values have been kept down mainly on account of the existence of Government stocks. The latter, however, are now practically exhausted, and spot prices for spruce in Manchester and Liverpool—that is for good spruce—show an improvement. Recent cargoes have been quickly cleared out, and values have risen accordingly.

Although the engineering industry is not in a flourishing condition, sufficient work is being done to influence the sales of certain kinds of timber. One importer states that he has been surprised at the readiness with which his stocks have been taken up by engineering concerns, as well as by the number of orders still on his books.

### Imports of Canadian Timber

House building is proceeding under municipal and private enterprise, but not on so large a scale as to create a big demand for house timber.

Boxmakers all report an increase in their activities, and consequently the demand for timber used by them is correspondingly active.

There are no statistics illustrating the quantities of Canadian

timber received at Manchester during the last ten months; but figures are to hand to-day relating to the entire imports of the United Kingdom, in which, of course, Manchester is included.

The imports of hewn hard wood were 250,480 loads, compared with 262,759 loads in the first ten months of last year, and 793,947 loads in the corresponding period of 1920. Imports of hewn soft wood were 3,179 loads, compared with 1,399 loads and 20,186 loads in the corresponding periods of 1921 and 1920 respectively.

Sawn hard wood imports were 1,841,968 loads, 793,240 loads, and 2,514,563 loads in the first ten months of this year, 1921 and 1920 respectively; while those of sawn soft wood for the same periods in the same date order, were 388,951 loads, 145,124 loads, and 791,333 loads.

It will thus be seen that imports from Canada show a large decrease so far this year in comparison with 1920.

## The Demand in Argentine for Lumber

B. T. Webb, Canadian Trade Commissioner at Buenos Aires, Argentine, in a recent report to the Department of Trade and Commerce, Ottawa, on the timber requirements of the South American republic, says that it is one of the largest importers of wood and wood products in the world. Mr. Webb adds that this is due to the fact that the centres of population are far removed from native sources of supply and the means of communication between the forests and the cities are still undeveloped; practically all lumber required for construction and general purposes has therefore to be imported from abroad. The total value of the imports, as classified in the Government statistics, under the heading of "Wood and Wood Products," amounted during the five years 1910-14 to an annual average of seventeen millions of Argentine gold pesos, this being the "official value;" the real commercial value would be about 15 per cent. higher. The Argentine gold peso, which is the unit of currency used in Government statistics governing imports, is approximately equal to the Canadian dollar in value, the actual mine par value being 96.52 cents.

With the outbreak of the war, the imports of lumber and lumber products fell off considerably, and in the year 1915 less than seven million dollars' worth was brought into the country. This falling off may be attributed in part to war conditions, but was also due to a certain extent to the collapse of the building boom which was at its height in 1913 and had entirely exhausted itself by the end of the following year. The imports for the year 1916 were practically the same as for the year 1915, but 1917 registered a further fall, less than four and a half million dollars' worth being imported during that year. During the year 1918, however, the tide turned and, as statistics show, there has been a regular increase since, the imports for the year 1920 approximating ten million pesos in value. It will therefore be seen that while the volume of imports has steadily increased during recent years, it is still considerably below the pre-war annual average. As the population tends to increase steadily (even if slowly at the present time), and as building operations have been considerably curtailed during the past eight years, and further, as there has been no recent development of native sources of supply, it is reasonable to assume that the imports of wood and wood products will continue to increase until such time as they equal, or surpass, the annual pre-war average.

With the exception of poplar, willow, and cedar, nearly all the Argentine timbers are hardwoods with specific gravities greater than that of water. While it is true that poplar and willow are easily accessible, growing as they do in the delta of the river Plate, these woods are not of much value for general purposes, their principal uses being as firewood and for the making of box shooks. Cedar of good quality for general purposes and particularly for the making of furniture, shop fittings, etc., is grown in Tucuman and other provinces, and also in the neighboring republic of Paraguay; very little is imported, most of the few thousand dollars' worth which comes in annually from foreign sources being supplied by Paraguay. So far as the native hardwoods are concerned, these are of numerous varieties, many of them having beautiful grains and being capable of taking high polishes. For this reason they are sometimes used for making high-class furniture, but even for this purpose they are not extensively employed, it being found to be more economical and generally satisfactory to make such furniture from imported veneers on bodies of oak or cedar, as the case may be. The principal use of South American hardwoods is for railway sleepers and fencing posts, Quebracho being most widely used for these purposes.

From the above description of the varieties and the uses of local woods, it will be seen that the Republic is entirely dependent on foreign sources for its supply of softwoods such as pine and fir timbers for building and general construction work. As a matter of fact, an analysis of the customs returns shows that this class of lumber is imported to a very large extent.

### Lumber Trade Omens for Coming Year

The outlook for the coming year in the lumber trade is reviewed at considerable length in other parts of this edition and needs no extended elaboration. A score or more of representative lumber manufacturers, wholesalers and others have declared in another column of the "Canada Lumberman" that stocks are low, some as much as 50% below what was in the mill yards last January, that prices are firmer, trade increasing and the prospects bright.

Much interest always centres around the future. We are concerned more largely in what is going to happen than what has happened. The past is a closed book and cannot be recalled but, of the days that are to come, we like to learn everything concerning the business in which we are engaged. When the situation grows steadily hopeful, when those who supply camp and logging equipment, sawmill machinery, yard and railway apparatus, all report that orders have been rolling in rapidly during the past few weeks, there is no mistaking that confidence is firmly in the seat and has hold of the reins.

Progress should now be comparatively easy as the road is no longer studded with difficulties and dangers which were heavy handicaps for the industry during the past year and a half. Building revival and awakened industrial interests are calling for more wood products all the while. People have almost en masse seized upon the idea of owning a home and are giving expressions to their wishes as fast as it is possible with the earning power at their disposal.

The cut this winter will be considerably larger than a year ago and this applies particularly to spruce in the eastern provinces. A calm survey of the situation reveals the fact that some surprisingly swift advances have taken place recently on certain kinds of woods in which there is developing a shortage. It is to be hoped for the stability, influence and safety of the lumber industry that the reach-out-and-grab-all spirit will not permeate the market, the same as it did in the early days in 1920 when men sat at their desks and by calling up customers could buy and sell on a basis that, within thirty minutes netted them a handsome return. Then there was actually no transfer of stock in the sense of cutting, hauling, piling, loading, transporting or delivering. It was a case of, metaphorically passing on a consignment from one dealer to another and each time at a substantial advance. The result was that when the zenith of values was reached in September there came an awful crash. Everybody wanted to unload at once, contracts were cancelled, and those, who could ill afford it, were caught with heavy stocks on hand. Hardwood producers suffered the most because their product ran into colossal sums of money. However, it has taken a long time for things to get back to normal. The return has been tedious and it required the exercise of all the faith and courage that one possessed to keep on going.

Early this spring signs showed that there was some evidence of solidity to the market, and subsequently the building campaign extended beyond anything ever dreamed of and stocks began to move out. True, the past few months have not been a money-making period with many exponents of the forest products industry but the members have rid themselves of the incubus or embarrassment of high-priced stocks, and have taken their losses without a whimper.

It is very gratifying at this early period to look around once more at things industrial, commercial and financial and think that normal conditions again prevail. While a record log cut is being taken out in some parts of the Dominion, it does not follow that there will be any surplus of stock. The lumber yards in the great consuming centres of America, as well as the import cities of Great Britain, are depleted. Manufacturers, who are using native and imported hardwoods have also allowed their usual reserve to be greatly reduced. All these things have been brought about through apprehension of a price recession. This move now appears to be entirely out of the question as the cost of getting out logs will be a little higher than last year, and with higher wages, stronger demand and larger export, 1923 should witness a measure of satisfaction in the lumber arena that will do much to atone for the disappointments of the last eighteen months.

1921 was a year of heavy losses and 1922 one of liquidation or merely breaking even. It is doubtful if many concerns have made worth while earnings. The fact that so many lumber organizations have been held together during the trying periods of the past and are now keeping step to the altered state of affairs, is a tribute to the sound judgment, long vision and stout-heartedness of the votaries of the great enterprise, which is in every way a real man's business, for it brings out all that is truest and best in his make-up and mentality.

### Why Does Youth Side Step Today?

One of the important matters to come up for discussion at the forthcoming annual meeting of the Ontario Retail Lumber Dealers' Association in Windsor, this month is apprentices for planing mills. Of late years very few young men have been coming into the wood-working ranks. This is due, no doubt, to a number of causes, some of which are attributable to the young men themselves and others to the proprietors of the establishments. Wages, it is declared, have been too low, hours too long and the future unattractive. In a few years, unless there is an influx of new blood, the planing mill will be almost deserted so far as adaptable young men are concerned.

Nowadays a walk through any establishment will reveal that the greater number of employees are men past middle age, and when these die off or retire on account of old age or infirmities, there is no trained recruit to fill their places. Conditions seem to be getting worse instead of better.

Just why more young men do not enter the woodworking arena, it is difficult to tell. Some blame it on labor unions in limiting the number of employees, others on the lack of training facilities outside of those provided by labor unions and still others on the competition of other trades at higher pay.

This matter was discussed recently at the National Retail Lumber Dealers' Association in Cleveland. It was generally agreed that one of the best ways to secure boys was to encourage trade schools or the manual training department of public schools. These institutions not only familiarize lads with the machines in different industries, but give them an opportunity to discover what trade they like best. It is costly for the proprietor and for the boy also, to bring him in to a plant and find, after a few months' service, that he has no liking or adaptation for the business and would rather be an electrician, a wireless operator or a street railway motorman.

### Do Not Make By-Word of Service

Some men succeed in spite of circumstances. They seem to over-ride and over-rule every law of failure, opposition, depression or system. These however, are the exceptions. The great majority go down and under because they live too much to themselves. Selfishness is the chief expression of their lives and deep down their hearts are tinged with that Vanderbiltian attitude "the public be damned." The public is at times an exacting taskmaster but its members often put up with most indifferent and dissatisfactory service imaginable because they have to.

There is possibly not any other avenue of relief at the moment or one follows the line of least resistance, yet every retailer, whether in the lumber line or hardware, grocery, harness, drygoods or furniture, will speak about service and prompt delivery when it is the last thing on earth that he seriously thinks of or really believes in. It has become a somewhat trite expression which he hears on all sides and he thinks he might as well appropriate its use as anybody else.

The kind of service that some dealers give is a burlesque—a real-

ly painful hoax. They never have the material on the job at the hour promised and never offer any excuse unless "called down," and then they proceed to justify the delay in the most plausible terms, hoping to get away with it. A lumber merchant may fool the public part of the time but he cannot fool all the public all the time, and the sooner he recognizes it, the better.

There are almost as many different definitions and conceptions of service as there are of goodwill. Possibly the most succinct and comprehensive meaning is that of having a stock of the proper quality and the goods delivered on the premises when promised or even before. This may sound very simple and elementary but the more one looks upon it, the broader its significance and the more outstanding its details.

Many pages might be written about service but, in the lumber line, it all resolves itself into the ideas already set forth. These were uttered, not by any large city dealer or big manufacturer, but by a small retailer at a cross-country section who has built up a name for himself in that locality. His business has attained a proportion which, if the figures were published, would appear staggering to some men in the larger towns—and he has done this all through service. He has the lumber, he has the delivery equipment and he keeps his word. How many others can say the same?

### Need of Proper Accounting System

Many men are running a business to-day at a loss, and one of the chief contributing causes is the lack of a proper accounting system. It is the little leaks which sap the vitality and undermine the strength of any concern, and these insidious wastes go on from day to day without those in charge giving heed or trying in any way to remedy them.

There is a lamentable lack of information on the cost of doing business and what represents overhead; how turnover should be figured; what constitutes a margin of profit; are delivery costs too high; what proportion of the total expense of a lumber business should the planing mill bear, etc. Very few retailers know or give much attention to these important details. They are often ready to take a job on which they lose money just because Mr. Blank up the street will do it for so and so. They infer if Blank can do it and live, they are in a much better position financially than he is and should be able to stand the gaff.

As has been frequently said, there is too much guesstimating and not enough estimating. What is needed is getting down to basic facts. The time has come when a yardman or a planing mill man must have accurate knowledge of every item of expense entering into the cost of doing business. There is so much evidence in every line at present that quality and service generally win and there are no long prices today on which to make a nice clean-up in profits, as was the case a few years ago. The public is too well acquainted with lumber values and the only way to make money in this era is frequency of turnover. Success depends on doing a large business at a comparatively small profit.

The National Wholesale Lumber Dealers' Association of the United States has appointed a Cost Accounting Committee which will keep up its work until an easy, adequate and practical system of cost accounting is discovered which will be suitable for all kinds of lumber yards, big and little. Retailers are beginning to realize that the man, who gets furthest ahead to-day in the race for expansion and wealth is he who has his affairs at all times well in hand. The lumber merchant, who gives definite, progressive thought to his own business, is the one who is willing to receive points from others and also give others the benefit of his own experience.

The function of an accounting system, of course, has nothing to do with prices or the margin of profit. It deals only with the actual cost of buying, storing and selling the various lines that are carried in stock. When the day arrives so that the average retailer will know exactly what a thing costs him and can fix a price that will net a fair profit, it will seem as if a new period of prosperity was close at hand.

### What Retailer Can do in Spare Time

There arises from time to time in all businesses dull periods or slack moments when nothing much can be done. The weather is unfavorable or all big jobs have been completed and there are none in hand for a few days. The rush is over and before another one begins the question often arises with the retail lumberman what he should do to fill in the time. Instead of bemoaning fate and sitting around with an air of anguish or indifference there are plenty of tasks at hand to which he can give attention. One of the pertinent problems that a man can face is that of self-analysis. Does he ever take a few minutes to step out of his own shell, so to speak, and view himself by large and small in the matter of honor, respect, confidence, character and purpose,

Does he ever stop to consider what there is about his business that would or should cause buyers to come to him for their building needs instead of going to a competitor. Does he check up wherein he has fallen down on some contract or job, how the other fellow got some business or why his turnover last season was not as great as it should have been.

Does he seek to discover leaks that may appear insignificant but which, at the same time, are sapping the vitality of the business? Does he examine his premises, his yard, his delivery equipment, to see that everything is up to the mark? What about the employees? Does he endeavor to find whether they are efficient, courteous and industrious?

There are a score of things which the average retailer can attend to when there is a lull in trade or the weather is unpropitious for outdoor work. It is then when he gets an opportunity to do something, and, among the tasks which he can carry out, as suggested by the "American Lumberman," are: Check insurance policies. See that all property is adequately covered; that one part is not over insured while another part is inadequately covered.

Go over credit accounts, segregate those that are most in need of attention and lay plans for collecting them.

Check over the list of customers. If some who formerly were liberal purchasers have quit buying, record that fact and make a point of finding out why.

Make a survey and an estimate of the coming year's business.

Have trucks, wagons and other vehicles and equipment thoroughly inspected and give orders to have all needed repairs made.

Plan the part to be taken in the program of the annual convention of the association. Suggest to the secretary well in advance subjects that may be profitably discussed.

Inspect the sheds and the office, and plan for necessary repairing and painting.

If during the year there have occurred some shortages of stock, investigate the cause with a view to adopting methods of buying that will prevent them in future.

Have the yard men straighten up all piles that are in disorder and return to its place stock that has been misplaced during the rush.

Plan for inventory taking so that it will be sure to go through smoothly and accurately.

### The Neglected Factor

Mr. Sherman, of the Westinghouse Union Battery Company, says that one reason why national advertising campaigns failed in 1921 was that the dealer was not advertising. He feels that more attention must be paid than heretofore to selling the advertising idea to the retailer through whom the goods are being sold to the general public.

It is hinted, that one of the causes for the recent failure of the manufacturer of Ingersoll watches was lack of attention to the dealer. The manufacturer advertised heavily to the consumer, but when it came to real work on the dealer, there was little interest shown.

"Class" regards these two statements as significant. They show that many manufacturers have given the trade too little consideration, and that the merchant has been a neglected factor. Too many manufacturers have thought that consumer advertising was the whole story, and that carrying on a national campaign to the general public gave them a franchise, so to speak, entitling them to the interest, co-operation and support of the retailer.

This is a huge mistake. The dealer is interested in advertising, and appreciates its value as a merchandising stimulus, but there are many things about the product that he wants to know before he gets enthusiastic to the point of spending his own money in support of the manufacturer's efforts. Consumer advertising does not always impress him as the major reason in favor of stocking and pushing a given item.

More attention to the trade will conserve advertising efforts. Cultivation of the retailer will pay dividends. Tell the merchants, through their own trade publications, what you are doing. Seek their interest and support on a business basis—that you have a good article, priced to yield a profit, and capable of being sold to advantage in the dealer's store. Make a friend of the merchant, and justify the friendship by the advantages a connection with you will bring.—From Class, Chicago.

A woodlot on every farm, maintained under the rules of scientific forestry, drawn upon for fuel annually, would make about half of the population of Canada wholly independent of the coal miners and the coal-mine operators in the matter of keeping the home fires burning.

## Mr. O'Leary Organizes His Own Company

P. J. O'Leary, New York City

A newcomer in the list of wholesale lumber concerns of the Metropolitan District is the O'Leary Lumber Company, just incorporated, under the laws of New Jersey, and already an active, going concern. The active head of the new company is P. J. O'Leary, who has been identified with the trade here for some ten years and is well known in the trade of the district and contiguous territory, says the New York "Lumber Trade Journal."

Mr. O'Leary launches his ship of commerce after many years of experience in those lines of lumber which will be the leaders in his list of offerings to the trade, namely: white pine and spruce. Though young in years he is a veteran in lumber, for he has been in it for twenty-one years in every department of manufacture and distribution. He began with the famous old house of Skillings, Whitneys & Barnes Lumber Company, at Ogdensburg, N.Y., where he learned lumber on the ground, and advanced through various positions of executive character. About ten years ago he came to New York to join the force of E. H. Daley Lumber Company, and was Vice-President of that Company up to the time of his resignation a few weeks ago. In New York he has been chiefly engaged in the sales field, and in the time that he has been there he has established a wide acquaintance with lumber buyers of the district and nearby territory including Long Island, New Jersey, Westchester and Connecticut. During the war Mr. O'Leary was a lumber engineer with the War Department, having full charge of the Lumber Utilization Section, Bureau of Aircraft Production in the Boston District. His practical knowledge of lumber being of great value in the construction of Aeroplanes. He begins business at a time when conditions are favorable for the kind of encouragement that a new concern needs; but aside from that, there is behind the new enterprise, expert knowledge of the product and adequate sources of supply.

Mr. O'Leary is well known in Canada, being an old Orillia boy and during his collegiate days was an all around champion athlete, his characteristic aggressiveness being learned on the lacrosse field. He was married October last to Miss Maude Leahy in Peterborough, Ont. Many friends in the lumber industry in Canada, will wish him abundant success in his new business enterprise.

## Sawmill Equipment in Good Demand

The Wm. Hamilton Co., Limited, Peterboro, Ont., report a decided improvement in the demand for sawmill and lath mill machinery, as is evidenced by the large number of inquiries received during the past three months and the volume of business closed. The increase, while it has not been rapid, has been substantial and the prospects, the firm state, look much better now. Greater confidence seems to be established and business appears to be on a more settled basis.

The demand for lath machinery is quite brisk at the present time and considerable business is being offered. Improvement is also noted in the pulp and paper equipment line and the prospects for additional installations are getting better all the while. Altogether the company say their plant is now running full time with about 75% of normal staff.

## The Lack of Economic Intelligence

Actuated by a desire to advance the study, and more general appreciation of economics, Alvan T. Simonds, President of the Simonds Saw Company of Fitchburg, Mass. and Chicago, Ill., proposes an essay contest open to pupils of high schools and normal schools in the United States and Canada. Mr. Simonds offers two prizes of \$1,000 and 500 for the best essays written by students on the subject: "The lack of economic intelligence and some of the injuries it has caused individual and general welfare since 1860."

Mr. Simonds hopes this contest will interest many in the study of economics, who might otherwise pass it by. He also expects it will aid in creating a public sentiment that will result in the practical study of the subject in secondary schools as part of the training of every teacher.

By way of suggestion, the donor of the prizes points to the fact

that unemployment, hard times, and business failures are economic disorders, which like the diseases of the human body can be avoided by greater economic intelligence. The essays which Mr. Simonds anticipates, should deal with facts of this kind as well as explain concrete examples of injury to individual or general welfare, due to the lack of economic intelligence. The readiness of many to accept economic fallacies and to act upon them is another phase of the subject writers may dwell upon. Rules governing the contest have been prepared, and persons interested may obtain copies of them by addressing the Simonds Economic Prize Contest, 470 Main Street, Fitchburg, Mass.

## What Canada is Doing For Forestry

While there is much to be done in regard to forest conservation in Canada, the progress that has been made in the last few years has been most gratifying. There are now four forest schools connected with Canadian universities. Forest experiment stations have been established in different parts of Canada to study the best methods of forest reproduction. Last season in addition to protecting the forests by means of hundreds of patrolmen on foot, in canoes, in motor-boats, and on railway velocipedes, airplanes were used for forest protection in no less than five provinces. In the aggregate probably two thousand miles of telephone lines have been erected for forest protection work. For the better utilization of forest products there have also been established under the Department of the Interior Forest Products Laboratories where all problems connected with manufacture of every kind of forest product are studied and the result made available to the people of Canada. A great change has also taken place in the attitude of people generally towards forest protection.

## Wants Amendment in Lien Act

An amendment to the Workmen's Lien for Wages Act was introduced by J. W. deB. Farris, K.C., in the B. C. legislature recently.

The amendment states that the lien is not to apply on manufactured lumber in the possession of any person who has purchased same in the ordinary course of business and shall absolutely cease to exist in respect for manufactured lumber after same has been sold in the ordinary course of business by the person manufacturing same.

It also states that no purchaser of manufactured lumber in the ordinary course of business shall be required to know or inquire whether any wages remain unpaid in respect of same or require the production of a payroll or wages sheets of any person performing any labor or service in connection therewith or in connection with the logs and lumber from which the same has been manufactured.

## Shingle Nails are Tested at Laboratories

Few people associate the word "research" with such ordinary things as nails, but it is declared by the Forest Products Laboratories of Canada, Forestry Branch, Department of the Interior, that carefully conducted experiments are having an influence on the manufacture of such articles. The selection of the most suitable nail for fixing shingles is likely to be determined by tests made at the Laboratories in Montreal to find the holding power and rust-resisting qualities of different types of shingle nail on the market. One of the most promising appears to be a Canadian-made cut nail which held more firmly than any other and had a better galvanized coating. These nails were cheaper per barrel than imported nails, but as each nail contained a little more metal the number per barrel was somewhat smaller. The work of testing nails might seem outside the scope of the Forest Products Laboratories of Canada, but it is a natural sequel to their series of tests on the nail-holding qualities of Canadian woods.

## Necessity for Uniform Cost-Finding Systems

Formerly the necessity for the determination of true costs was not as imperative as it is today. Margins between cost and selling price in most lines were larger. Costs could be ignored except in a general way and a good return still be made on the investment, but today margins of profit in most lines of trade are very much narrower than formerly, and the necessity for the most efficient management and closest analysis is felt as never before.

New methods are being introduced and improved machinery installed, with a view of reducing costs by increasing efficiency. It is impossible to know whether the introduction of these improvements will reduce costs unless the operator knows, not only what his total cost is, but exactly what items make up the total. Items of cost are frequently lost track of when the total only is considered, while if these items were properly segregated so as to show what they were, it is possible that a material reduction in some instances could be made.

# Montreal Makes Ready for the Big Gathering

*Fifteenth Annual Meeting of the C. L. A. to be Held at the New Mount Royal Hotel, January 24th. and 25th.—Attendance Promises to be the Largest on Record*

The best and biggest convention of the Canadian Lumbermen's Association is the aim and object of the Montreal lumbermen who are cooperating to entertain the delegates at the forthcoming annual meeting. They are working energetically to that end. Although the plans from the local end are naturally not yet of a definite character, they are sufficiently advanced to show that visitors will not lack anything which will make for a successful convention, looked at from the social side.

The burden of the preliminary work fell to the lot of J. B. White and G. W. Grier. At their invitation a meeting of lumbermen was held at the Board of Trade rooms, Montreal on December 12th, at which Mr. White invited the support of the Montreal industry in entertaining the delegates. The question of ways and means was discussed, the meeting being of the opinion that nothing should be left undone to give the visitors a warm welcome and the utmost hospitality. The meeting was largely attended and was representative of almost every section of the industry.

## The Committees for the Convention

The following Committees were appointed:—

Central Committee:—Messrs. E. H. Lemay, chairman; J. B. White (Riordon Co., Limited), vice-chairman; George W. Grier, (G. A. Grier & Sons, Ltd.); D. H. McLennan (McLennan Lumber Co., Ltd.); Arthur H. Campbell (Campbell, MacLaurin Lumber Co., Ltd.); Alex. Fenton (Riordon Co., Limited), secretary-treasurer.

Finance Committee:—Messrs. J. S. Bock (Eagle Lumber Co.,

thods of raising money, the possible attendance, etc. It was arranged that the Finance Committee would commence active work the first week in 1923.

It was also arranged that the Montreal lumbermen should be responsible for arranging a luncheon for the ladies on January 24th, a luncheon for the delegates on the same day and a dinner-dance in the evening.

## Five Hundred Delegates Anyway

The programme of entertainment for the ladies will probably include a theatre party, tobogganing party or drive to the mountain, and tea parties.

At the weekly luncheon of the Montreal Wholesale Lumber Dealers' Association on December 20th, J. S. Bock asked for the co-operation of members of the association in making the convention an outstanding success and for the means to carry out the plans in view.

The speakers for the banquet on the night of January 26th were arranged for by J. B. White and G. W. Grier. The chief speakers will be the Hon. Walter Mitchell, K.C., M.P. Provincial Treasurer of Quebec, and Dr. Gordon, Laing B.A., Professor of the Faculty of Arts, McGill University.

Frank Hawkins, of Ottawa, secretary of the Canadian Lumbermen's Association, says that reservations are coming in rapidly for the annual convention which will be held in Montreal, January 24th and 25th, and it is advisable that delegates should notify the secretary so as to be assured of accommodation.

The Secretary of the Canadian Lumbermen's Association says that first and, as a matter of considerable importance, the Mount Royal Hotel will be in thorough running order and delegates and friends need have no apprehension regarding their comfort and convenience not being adequately provided for. When Mr. Hawkins told Mr. Cardy, manager of the Mount Royal, in response to a question that the C.L.A. expected to have five hundred delegates Mr. Cardy replied, "Good! Make it a thousand."

An effort will be made to get through the routine business of the Association by noon on Wednesday 24th so as to leave Wednesday afternoon and the whole of Thursday January 25th for a red-hot discussion on the floor. The officers of the Association are endeavoring to make arrangements to have short addresses on the problems which confront the lumber business. These addresses will be delivered by eminent authorities and it can be safely said that the two days' convention will touch the high-water mark of achievement.

## Brief History of the Association

The Canadian Lumbermen's Association was organized in August 1908 and the forthcoming meeting will be its fifteenth annual. Gordon

Attractive cafe of Mount Royal Hotel, Montreal

Limited); L. G. Gravel (Gravel Lumber Co., Limited); G. A. Grafftey; W. B. Blair (Blair Bros., Limited); W. A. Filion (E. H. Lemay); J. B. Knox (Knox Bros., Limited); E. C. Plant (E. C. Plant Lumber Co.); T. Prefontaine (T. Prefontaine & Co.).

Entertainment Committee:—Messrs. J. G. Shearer (J. Shearer Co., Limited); W. Arthur Grafftey (Montreal Lumber Co., Limited); A. E. Grier (G. A. Grier & Sons, Limited).

Dance Committee:—Messrs. G. C. Goodfellow; Gordon Walklate (Trans-Canada Lumber Co., Limited); S. Rutherford (Grier Timber Co., Limited); J. S. Bock; V. Treversy, Jr. (Traversy, Limited.).

Luncheon Committee:—Messrs. C. Villiers, (Canadian General Lumber Co., Limited); J. P. MacLaurin (St. Maurice Paper Co., Limited); J. R. Haines, (McLennan Lumber Co., Limited); W. T. Mason (Mason, Gordon Co., Limited.).

Ladies' Committee:—Mesdames J. B. White, D. H. McLennan, A. H. Campbell, A. E. Grier, J. G. Shearer, C. Villiers.

On December 19th the members of the committees met at the Mount Royal Hotel. A. E. Clark, president of the Association, presided and Frank Hawkins, secretary, came from Ottawa to be present. Both gave the committees details as to other conventions with a view to making adequate arrangements.

The discussion mainly dealt with financial matters such as me-

Main dining room of Mount Royal Hotel, Montreal

C. Edwards, of W. C. Edwards & Co., Ottawa, was the first president and Frank Hawkins of Ottawa, has been the energetic secretary since the birth of the institution, the head offices of which are in the Fraser Building, Queen St., Ottawa. J. B. Miller, of the Parry Sound Lumber Co., now of Toronto, was the second president, Mr. Edwards retiring in 1910. Mr. Miller filled the chair for two years and then the late Alex. McLaurin, of the St. Maurice Paper Co., and the Campbell, McLaurin Lumber Co., Montreal was the third presiding officer. Hon. George Gordon, of North Bay, was the next wielder of the gavel and he was followed by W. E. Bigwood, of Graves, Bigwood & Co., Toronto. W. Gerard Power, of the Power Lumber Co. Ltd., St. Pacome, Que., and W. & J. Sharples, Ltd., Quebec, occupied the seat for the next two years. In 1920 and 1921 Dan. McLachlin, of McLachlin Bros., Arnprior, Ont., guided the destinies of the growing organization, and last winter at the annual convention in Toronto, A. E. Clark, of Edward Clark, & Sons, Toronto, was made the president. J. Fraser Gregory, of St. John, N.B., is the first vice-president, and Angus McLean, of Bathurst, N.B., second vice-president.

Practically every presiding officer until the end of 1921 filled the chair for two years but a new departure was inaugurated and it was felt that an incumbency for one year would be the regulation henceforth. Mr. Clark will have completed his term in January.

J. R. Booth, the veteran lumberman of Ottawa and the oldest and most prominent operator in Canada is honorary-president of the Association.

R. G. Cameron of Ottawa is honorary-treasurer and a permanent director of the C.L.A.

With regard to the presidency of the C.L.A. for 1923 the directors, including the newly-appointed ones, meet immediately after the annual session and elect a president, vice-presidents and other officials.

The present directors are:—A. E. Clark, Toronto, Ont., Gordon C. Edwards, Ottawa, Ont., W. E. Bigwood, Toronto, Ont., W. Gerard Power, Quebec, P.Q., Angus McLean, Bathurst, N.B., Spencer Kellogg, Utica, N.Y., R. E. Stocking, New York, N.Y., Dan McLachlin, Arnprior, Ont., E. R. Bremner, Ottawa, Ont., David Champoux, Restigouche, P.Q., Geo. W. Grier, Montreal, P.Q., Brig-Gen. J. B. White, Montreal, P.Q., J. Fraser Gregory, St. John, N.B., F. C. Knight, Vancouver, B.C., G. E. Spragge, Toronto, Ont., W. J. Bell, Sudbury, Ont., Duncan McLaren, Toronto, Ont., Sir William Price, K.B., Quebec, P.Q., Arthur H. Campbell, Montreal, P.Q., W. B. Snowball, Chatham, N.B., Rufus E. Dickie, Stewiacke, N.S., R.G. Cameron, Ottawa, Ont.

#### The Seven Retiring Directors

The directors whose three-year term of office expires this year are:—

G. E. Spragge, Toronto; W. J. Bell, Sudbury; Duncan McLaren,

Toronto; Sir Wm. Price, Quebec; Arthur H. Campbell, Montreal; W. B. Snowball, Chatham, N.B., and Rufus E. Dickie, Stewiacke, N.S. All of these are eligible for re-election for another three years. They are all well known in the industry and have been warm friends of the C.L.A.

At the annual meeting in 1920 in Ottawa a distinctive step was taken when it was decided that a Transportation Department should be established and a few weeks later R. L. Sargent was appointed manager of that branch, which has done effective work.

It is now five years since the Association met in Montreal. For the first few years that city or Ottawa was the Mecca for the annual gathering. In 1917 the convention came to Toronto and the next year it went back to Montreal then St. John took it East in 1919 and Quebec had the honor of entertaining the lumbermen and their lady friends in 1920. Ottawa was the convention centre in 1921 and last year Toronto was able to boast of that distinction. It looks as if the forthcoming assembly in Montreal will be the most representative of any ever held in the history of the C.L.A.

#### Became International in Character

Mention has already been made that one decisive step in the meeting at Ottawa was the decision to establish a Transportation Department. Last year another outstanding move was effected by the Association when it became international in its scope and character and elected two directors from the United States for a period of three years, they being Spencer Kellogg, of Charles C. Kellogg & Sons Co., Utica, N.Y., and R. E. Stocking, of Power, Moir & Stocking, Inc., 1302 Flatiron Building, New York City. Out of a membership of nearly two hundred, the C.L.A. has some twenty firms in the United States included in its ranks.

Rumor has it that the 1923 meeting of the Canadian Lumbermen's Association will be held either in St. John, or Quebec. According to report, St. John is likely to get the honor of entertaining the delegates.

Another feature of the C.L.A. is that until the gathering at Quebec in 1920, very few of the delegates were accompanied by their wives and daughters. Now this is all changed and the social festivities are supervised in an admirable manner by a local committee which leave nothing undone to see that the ladies are looked after from the time of their arrival until their departure. They are now guests at the annual banquet and various other social functions are arranged in their honor. Montreal will not be behind in its extension of courtesies for the joint chairmen of the Entertainment Committee, George W. Grier and Brig. Gen. J. B. White, along with the other members of the committee, are planning a programme of variety and interest.

## Mr. Gordon Launches Company in Lumber Line

A. E. Gordon, Toronto, Ont.

As announced elsewhere in this issue Mr. Albert E. Gordon, formerly vice-president of Terry & Gordon, Limited, of Toronto, has withdrawn his interests and severed his connection with that firm. He started in business on his own account under the name of the A. E. Gordon Lumber Company, with offices at 705 & 706 Confederation Life Building Toronto, Ont. Associated with others, Mr. Gordon has been actively engaged in the wholesale, manufacturing and export lumber business in Canada for the past twenty-four years, and brings a wide and successful experience into his new venture which augurs well for its success. Commencing with the late J. H. Eyer in Toronto, in 1899 as bookkeeper and in 1900 as shipper and salesman, Mr. Gordon

rapidly attained a thorough knowledge of the lumber trade in Ontario, and by dint of hard work and close attention, was successful in working up a large and successful business for his employer. In 1909 Mr. Gordon severed his connection with Mr. Eyer and joined forces with the Ontario Lumber Co. with head offices in Toronto and mills at French River, Ont. He was in charge of manufacturing and of selling the output of the mills, mostly in cargo lots. Late

in 1910 the Ontario Lumber Co., ceased operations and Mr. Gordon joined J. K. Muir and H. J. Terry under the name of Muir, Terry & Gordon, practically doubling their business each year until it attained an important place in the trade.

At the end of 1914 the partnership agreement having expired, the firm of Muir, Terry & Gordon dissolved, Mr. Muir retiring. Messrs. Terry and Gordon continued under that name until the end of 1919 when Terry & Gordon incorporated as Terry & Gordon, Limited which firm have been successful in working up one of the largest lumber businesses in Canada.

Early in 1915 Mr. Gordon conceived the idea of shipping all kinds of dressed and rough lumber from British Columbia on a large scale into Ontario. Hitherto only shingles, timber and a very limited quantity of lumber had been shipped into Eastern Canada. Establishing an office in Vancouver the firm have shipped as much as thirty million feet per year from that province.

For several years Terry & Gordon, Limited, have specialized in Eastern Canadian spruce, lumber and lath, as well as maintaining their other connections throughout Ontario and the West. In his capacity as buyer for the firm Mr. Gordon's travels have taken him from the Queen Charlotte Islands, off Prince Rupert, B. C. to the Atlantic seaboard. He has handled the overseas export business of the firm since its inception in 1919 and in 1920 visited the British Isles and France, establishing valuable and pleasant trade connections there.

Mr. Gordon intends to continue all his trade connections in the future as he has in the past with an improved service. Associated with him in his new venture are Messrs. L. M. Dougherty and E. D. Harper, salesmen and Mr. Clarke Allen, office manager. The "Canada Lumberman" join Mr. Gordon's many friends in wishing him continued prosperity in his new business.

# Mr. Retail Lumber Dealer! Do You Know How to Sell Your Product at Fair Profit

Ever since Pythagorus, the Greek philosopher, expounded our system of mathematics, men have delivered convincing arguments by the use of cold, hard figures. Some people like the phrase "figures never lie;" but figures do lie if used incorrectly. Many business failures, especially among retailers, when analysed, are found to be the result of insufficient knowledge in arriving at a correct selling price. Not a few men have worked diligently and thought they were making a profit and later found that their figuring had netted them a loss. This kind of figuring is not the result of lack of acquaintance with the practical end of the business, but not knowing how to figure all items to secure a fair net profit.

## Eliminate All Guesswork

Perhaps the man who gets into the worst hole is the one who guesses or says he "ought" to make so much by marking his product at a hit or miss price. Supposing a man bought a car of oak flooring at \$155 per M. If he didn't make a practice of doing his calculating on a sure basis when he sold a thousand feet of flooring, his figuring to arrive at a selling price would be something like this:—

Cost of Material .....	\$155.00
Profit (10% on Cost) .....	15.50

Total ..... \$170.50

He would now mark his commodity at say \$205 and trust to luck that the difference (\$34.50) would more than cover the overhead and perhaps he might make a little more than his 10% net profit. How the correct method of calculating worked, was this:

Cost of material .....	\$155
Overhead (20% \$170.50) .....	51

Total ..... \$206

It is clear that he is selling his oak flooring for a dollar less than it cost him, although he is convinced he is making, at least, a 10% profit. Of course, not many dealers are doing business this way, but there are some depending on making their bread and butter by such hopeless guessing.

Another instance where figures are juggled badly is when a man knows his cost of doing business but does not know, clearly, how to use his knowledge. He finds at the end of the year, or whenever he analyses his books, that his expenses amounted to 20% of his sales. On the strength of this knowledge he figures something like this:

Cost of Material .....	\$155
Expense (20% of Cost) .....	31
Profit (10% of Cost) .....	15.50

Total ..... \$201.50

In this case this is how the true figures tell what happened:

Cost of Material .....	\$155
Expense (20% of Sales) .....	40.20

Total Cost ..... \$192.20

The net profit is therefore \$6.30 or 3.1% of the selling price which is a noticeable difference from 10% of cost, the anticipated profits.

## Two Different Bases of Figuring

The difference between actual and anticipated profit, developed in the above illustrations, are due entirely to the fact that two different basis have been used in arriving at the selling price. In the first instance the percentage of expenses of 20% was reached by using the sales at selling prices. In the second instance this percentage was applied to the sales at cost prices. This is the error too often made by business men. Suppose the cost of a given article or commodity is \$1 and the merchant wishes to add a margin of 33 1/3 % to the selling price, how would he figure it? Adding 33 1/3 % to the cost will not give the desired result because: 33 1/3 % of \$1 equals 33 1/3 %. \$1 plus 33 1/3 % equals \$1.33 1/3 or selling price. 33 1/3 cents divided by \$1.33 1/3 equals 25%. Hence, instead of earning 33 1/3 % on the selling price, as he had planned, the business man would actually earn 25% only, because different basis of calculation were used.

The following figures give the equivalent percentages to be ap-

plied to cost prices in order to secure a given margin of profit on selling prices.

Desired per cent on selling prices	Desired per cent Corresponding cost prices	Selling prices (Continued)	Cost prices (Continued)
25	.333	35	.538
26	.351	36	.563
27	.370	37	.587
28	.390	38	.613
29	.410	39	.639
30	.430	40	.665
31	.450	41	.695
32	.471	42	.724
33	.493	43	.754
34	.515	44	.786
		45	.818

In order to avoid confusing the two bases of figuring something should be taken that represents 100%, that is the selling price. When one endeavors to take any part of it and call it 100% he encounters trouble. It is well then, to represent all parts going to make up the selling price as 100ths of this 100%.

Going back to the example of putting a price on the oak flooring the different percentages making up the sales price should be worked out in this manner:

Cost of Material ....	\$155	70% of Selling Price
Expenses .....	44.29	20% of Selling Price
Profit .....	22.14	10% of Selling Price

Selling Price .... \$221.43....100% of Selling Price

To arrive at the selling price, each part of it must be represented by a percentage shown above. If a 10% profit of sales is desired and it is known that commercial burden or overhead takes 20% of sales, one has therefore, accounted for 30% of the 100%. The cost of material (\$155) must then represent the remaining 70%.

The rule for obtaining the selling price whether the figures are in cents or in millions is this: Divide the cost by the percentage

it represents. The answer will be the selling price, (\$155 by  $\frac{100}{70}$  = \$221.43—the selling price). After the selling price is determined it is easy to figure how much profit is made by the use of the percentages.

## Changes in Toronto Wholesale Lumber Firm

Terry & Gordon, Limited, wholesale lumber dealers, Toronto, have sent out notices to the trade announcing that from January 1st the following changes will be effected in the firm:—"A. E. Gordon will withdraw his interest and will continue in the Lumber Business on his own account. H. J. Terry, A. S. Nicholson and A. E. Cates will continue the Business under the same style as formerly, but subject to a change of name as soon as same can be conveniently arranged. The Firm as newly constituted will assume all the obligations and contracts of the Company. We extend our thanks to the Trade for their assistance and courtesy in the past and offer them our sincerest good wishes for future health, happiness and prosperity."

## Big Sale of Limits in Quebec

The largest sale of timber limits ever held in the province of Quebec at one time will take place this month under the direction of the Department of Lands and Forests. It had been decided to sell the Manicouagan River timber limits which are situated on that river on the north shore. The area of the limits is about 2,000 square miles and the location is contiguous to the limits of the Ontario Paper Co., of Thorold, from which a large quantity of pulpwood is being taken out regularly by that organization. The importance of the sale is evidenced by the fact that a deposit of \$150,000 will be asked from the successful bidder as a guarantee that he will carry out the terms of the contract. Hon. Honore Mercier, Minister of Lands and Forests, will preside over the sale.

## Lumberman Who Possesses Public Spirit

Charles S. Anglin was recently returned as an alderman for the third year for Frontenac Ward in the city of Kingston, Ont. He has served on the Fire and Light and Health Committees with efficiency and zeal, and the fact that he has been elected by acclamation to serve another term as a city father, is a tribute to the regard in which he is held by the ratepayers.

Mr. Anglin is superintendent of the Sydenham St. Methodist Church Sunday School and is a member of the Church Board. He is also a director of the Rotary and the local Y.M.C.A., and belongs to the I.O.O.F and the A.F. & A.M. His brother, Francis R. Anglin, is at present a member of the Public School Board and chairman of

Ald. C. S. Anglin, Kingston, Ont.

the Board of Directors of the Y.M.C.A. He also belongs to the Kiwanis Club and during the year 1921 was chairman of the Board of Education.

The business of S. Anglin & Co., is one of the oldest in Eastern Ontario, having been founded by the late Samuel Anglin in 1866. The firm are extensive lumber and coal merchants and their well equipped factory, mills and offices are located at the corner of Wellington & Bay Sts.

The late Samuel Anglin was a member of the City Council and the Board of Education for several years serving for one term as presiding officer of the latter body. In his day he was a staunch Conservative and a warm personal friend of the late Sir John A. Macdonald. The Anglin family have long been identified with the public life of the Limestone City and have played no small part in its welfare and stability.

## Breezy Paragraphs of Lumber Industry

The sawmill of A. M. Shaver, Copetown, Ont., was damaged by fire to the extent of \$1,500.

John H. Oldershaw, of the firm John H. Oldershaw & Son, Chatham, Ont., well known dealers of builders' supplies died recently.

McAuliffe, Davis Lumber Co., Jackson Bldg., Ottawa, are contemplating the erection of a storage shed on Duke St., to cost about \$5,000.

Sydney, N. S., building total for 1922 is more than \$40,000 greater than in 1921. Last year construction totalled 556,813; this year that total is \$598,697.

The province of New Brunswick's exports in all lines for the first six months of 1922 were \$751,245 of which the sum of \$650,000 was represented by wood and wood manufactures.

S. Bick, formerly of the Bennett Lumber Co., Limited, Montreal, has returned to Canada for a visit. He has been engaged for several months in shipping lumber from Riga to the United Kingdom.

The plans for the organization of a retailers' association in Montreal are moving ahead. At a meeting held last week there was a very good attendance and it was decided to hold another meeting at which the association will be formally organized and the officers elected.

W. J. Henry, a well-known lumber merchant, is now operating a retail yard and planing mill at Flesherton, Ont., catering to everything in the building trade. A chopping mill is also run in connec-

tion by water power. Mr. Henry is, unfortunately, compelled to sell out, defective eyesight alone being the cause.

The Wayagamack Pulp & Paper Co., of Three Rivers, Que., are very busy at the present time. There are 600 men employed in the mill while there are approximately 1,000 more in the bush employed through jobbers. This year the Wayagamack Company are lumbering on the Vermillion River.

The Fraser Companies, of Edmunston, N. B., who are manufacturers of lumber, pulp, lath and shingles, are very busy at the present time. It is said that the company's cut in the bush this year will be 150,000,000 feet of lumber, and in addition there will be large quantities of pulpwood for their sulphite pulp plants at Edmunston and on the Miramichi.

The Streetsville Lumber Co. is now in operation at Streetsville, Ont., turning out a large quantity of doors for the Pannill Door Co., of Toronto. About thirty men are employed in the Streetsville plant which is said to be operating at a profit. The initial dividend on the preferred stock of the Streetsville Lumber Co. at the rate of 8% per annum has just been declared.

E. D. Warner, who for several years has been on the staff of the Associated Mills, Limited, of Vancouver, B. C., covering Western Ontario, has resigned and joined the staff of the Kingston Road Lumber Co., Toronto. Mr. Warner will have charge of their new retail yard on North Yonge St., which is being opened at the first of the year.

Charles McDonald, formerly manager of the Allen Lumber Co., Kingston, Ont., and latterly with C. A. Larkin Co., Toronto, has joined the staff of the Fesserton Timber Co., Toronto, and will cover Montreal and the territory south. He will open an office in Montreal. Mr. McDonald was some years ago associated with the Fesserton Company, and is well known to the trade.

Hall Bros., of Shelburne, Ont., who are well known to the trade, are planning an extension to their business. It is their intention to enlarge a planing mill and install new machinery, all of which is expected to be completed early this year. The firm run a retail yard in addition and have the reputation of turning out first-class work. They say the present outlook is promising and business is good.

J. R. Wheeler, of J. R. Wheeler & Sons, Washington, Ga., was a recent caller on the trade in Toronto, Montreal and other cities. He is a manufacturer of southern pine and previous to taking up his residence in the South, was in the lumber business in Pittsburg for many years. Mr. Wheeler is a former resident of Stouffville, Ont., and spends each summer at Jackson's Point where he has an attractive summer home.

The South Bend Hardwood Club, of South Bend, Ind., among its many activities for the holiday season, sent out invitations to the children of the Orphans' Home for a huge Christmas party at the Blackstone Theatre. There was a special bill provided for the entertainment of the little ones who were brought over by special cars. This is one of the many activities which the South Bend Hardwood Club is doing for the children of that city. Charles O. Maus, of the Charles O. Maus Lumber Co., South Bend, who is well known to the lumber trade in Canada, is a leading member of the Club.

The directors of the Abitibi Power & Paper Co., Iroquois Falls, Ont., recently declared the regular quarterly dividend of 1% of the common stock. F. H. Anson, president of the company, said that the affairs had reached a state whereby the 4% rate was assured practically for an indefinite period. The directors favor a policy of making distribution of profits to shareholders as they are earned in excess of the regular rate in preference to increasing the dividend to a level where the company's ability to maintain it would be less certain.

The tug "Reliance" which belonged to the Spanish River Pulp & Paper Co., Sault Ste. Marie, Ont., was wrecked in a terrible storm off Lizard Island. All the members of the crew with the exception of four were finally rescued, after undergoing great hardships. Fred. Regan, of the forestry department of the Spanish River Pulp & Paper Co., Capt. John McPherson, manager of the Booth Fishing Co., of Sault Ste. Marie, Mich., and two brothers are among those who lost their lives. It is believed that they were drowned in an endeavor to launch their boat. The survivors were marooned on an island without shelter and went through many bitter ordeals before help arrived.

J. S. Parker, of Toronto, who for the past six years has been with the Hydro-electric Power Commission as district engineer in charge of three systems, has been appointed general-manager of Knight Bros Co., Limited, Burks Falls, Ont., succeeding the late J. H. Cole. Mr. Parker is a Toronto boy who is a graduate of the School of Practical Science and, after leaving that institution, spent about four years with Knight Bros., in charge of their electrical department and later was placed in full control as mechanical superintendent. Many friends will wish him every success in his new sphere of activity.

# Logging Now and Then—Old-Time Equipment —How the Busy Gangs Work

Lumbermen who have all the way from millions to hundreds of millions invested in their business will find it hard to believe how primitive an industry lumbering was less than a hundred years ago in this country, even at a time when a total volume of production was of very respectable proportions. According to the chapter of lumbering or "Wood-Cutting" in a volume entitled "Enterprise, Industry and Art of Man," published at Boston in 1845 by Bradbury, Souden & Company, logging was an exceedingly crude process in the region which then supplied the bulk of all the lumber produced in the United States, which was New England, chiefly Maine, says a statement by the historic research department of the National Lumber Manufacturing Association.

The motive power of the simple and squalid logging camps of those days was oxen instead of steam or electric logging railways, automotive tractors, overhead trolleys, flumes, etc. The means of conveyance of the logs from forest to mill was entirely by river current instead of by railroad and towed rafts, as is so largely done today. It may be that some of the loggers in modern lumbering camps think that they have a very hard life of it at only three to five dollars a day with meals that would put most hotels to shame for quality and all of them for quantity; with private rooms, baths, libraries, longing rooms, gramophones, radio, moving pictures, etc. But they are in a material heaven compared with their fellows of 1845, who endured the severe winters of the Maine wilderness in structures that were a little better than the tepees of the Indians, not even a stovepipe being provided for the smoke from the cooking fire in the centre of the logging hut. However, the account of the anonymous author speaks for itself and is as follows:

## Source of Comfort and Luxury

"We have already seen the operations of human enterprise and art in fishing, hunting and mining—but the forest is as important a source of comfort and luxury as any of these. The habitations of men, as well as the greater part of their furniture; many of the most useful utensils of refined, as well as barbarous life; the canoe of the savage, and the ship of the civilized; the fuel of a large portion of the human race the greater part of the machinery of manufacturing countries—are dependent upon the vegetable productions of the forest. The spontaneous supply of such materials suited to the multiplied wants of man, is a theme which may well excite the grateful admiration of every reflecting mind.

"This subject is too vast to be fully considered here; we shall only attempt to present one or two topics, which, however, may serve as an index to the whole.

"The great forests of the continent of North America afford the most plentiful supplies of timber, from which not only our own country, but the British dominions in Europe and elsewhere, derive their materials for ship-building and other purposes. These supplies, of course, are obtained chiefly from those districts which lie near the ocean, as the labor of transporting so bulky an article to navigable waters, constitutes the greater part of the expense of obtaining it. Great Britain procures her American timber from Canada and Newfoundland. The Atlantic States of the Union obtain their supplies chiefly from the forests of Maine. A valuable species of oak called "live oak," is produced in the neighborhood of Florida, and this is used chiefly in the construction of our ships of war. The State of North Carolina furnishes a species of yellow pine, and Massachusetts and New Hampshire abound with white oak, both of which are used to a great extent in ship-building of all sorts.

## Persons who Make up the Party

"The timber procured from the woods of New Brunswick, and Maine is chiefly white pine and spruce. The business of felling this timber and bringing it to market is called "lumbering," the word "lumber" being an American appellation for boards and timber in a rough state. This business employs a large number of persons, both English and American. A "lumbering party" is composed of a certain number of persons either hired by a master lumberer, who pays them wages and finds them provisions, or of individuals who enter into an understanding with each other to have a joint interest in the proceeds of their labor. The necessary supplies of provisions, clothing, etc., are generally obtained from the merchants on credit, in consideration of receiving the timber which the lumberers are to bring down the river the following summer. The stock deemed requisite for a lumbering party consists of axes, a cross-cut saw,

cooking utensils, a cask of rum, tobacco and pipes, a large supply of biscuits, pork, beans, fish, peas, etc., for soup, with a cask of molasses to sweeten the beer which they draw from spruce and hemlock. Two or three yoke of oxen, with sufficient hay to feed them, are also required to haul the timber out of the woods.

"When all is ready, the lumberers proceed up the rivers into the thickest of the woods, where they select a favorable spot for their work, which is as near a stream of water as possible. They begin by clearing away a few of the surrounding trees, and building a log hut, which is roofed with bark, and provided with a cellar for lodging such of their goods as are liable to injury from the frost. The fire-place is in the middle of the hut, and the smoke goes out through a hole in the roof. Hay, straw, or branches of trees are spread on the ground, on which they lie down at night to sleep, with their feet to the fire which is kept constantly alive. One person officiates as cook, whose duty it is to have breakfast ready before daylight, at which time all the party rise, and each takes his "morning," or the indispensable dram of spirits before breakfast.

Immediately after this meal, they divide into three "gangs," one of which cuts down the trees, another hews them and the third is employed with the oxen or horses in hauling the timber either to one general road leading to the banks of the nearest stream, or at once to the stream itself. The whole winter is thus spent in unremitting labor. The ground is covered with snow two or three feet deep from the beginning of winter until April, and in the midst of the woods until nearly the end of May. When the thaws come on in April, the rivers rise, or in the phrase of the lumberers, the "freshets come down." At this time, all the timber cut during the winter is thrown into the water and floated down the head streams, until the river becomes sufficiently wide to make the whole collection into rafts.

## Floating Rafts Down St. Lawrence

"The construction of the vast masses of timber floated down the St. Lawrence and other great streams of North America is generally as follows. The raftsmen commence floating twenty or more pieces of timber alongside of each other, with the ends into a line. These ends are then bound close together by placing logs across, and binding one log to another with poles and switches. The size of the raft is then increased by adding pieces of timber in the same manner, until the whole lot to be rafted is joined together in one flat mass. The water at this season is excessively cold, yet for weeks together the lumberers are in it from morning till night; and seldom less than six weeks elapse from the time that the floating of the timber commences, till the rafts are delivered to the merchants.

"Hardly any course of life can more surely undermine the constitution, or be more injurious to health than that of a lumberer and raftsmen. The winter snow and frost although severe, are nothing to endure in comparison with the extreme coldness of the snow-water of the freshets, in which he is, day after day, wet up to the middle, and very often immersed from head to foot. The very vitals are thus chilled and sapped. The intense heat of a summer sun, a transition which almost immediately follows, must further weaken and reduce the whole frame and premature old age is the inevitable fate of a lumberer.

But notwithstanding all the toils of such a pursuit, those who once adopt this life seem fascinated with it and prefer it to any other. They are, in most respects, as independent as the Indians. After disposing of their rafts, they pass some weeks in idle indulgence, drinking, smoking, and dashing off in a long coat, dandy waistcoat and trousers, a handkerchief of many colors around the neck, a watch with a long tinsel chain and numerous brass seals, and an umbrella. At the end of the warm season they throw off all this finery, return to the woods, and recommence their laborious occupation.

The advice to plant nut-bearing trees for shade and ornament in the older settled section of Canada is good, but, as most of it comes from other countries where the conditions are different, it must be taken with discretion. One very useful point in a recent article was to the effect that walnuts may be grown wherever peaches thrive. It is true that walnut trees have been grown where peaches are not generally cultivated, but as a rule the walnut will not attain its best development where it is too cold to grow peaches.

### Budget of Briefs From Busy East

Archibald Fraser, a prominent lumberman of the province of New Brunswick, and also a holder of large pulp and timber lands in Nova Scotia, passed through St. John recently en route to Halifax. Speaking of the pulp industry he said it is not at present very promising, partly due to the fact that Scandinavian countries are becoming serious competitors with Canadian pulp in the United States. In the lumber industry, however, he said, there will be a large cut this year in the New Brunswick woods which is an indication of pre-war conditions. He pointed out that inquiries from overseas showed an improvement and that the United States market is good.

With reference to the prospects of the pulp and paper industry in Nova Scotia, Mr. Fraser said, he believed them bright. He pointed out that there is a lot of good wood there, but the water power he believed too small for any very extensive development in this line. He said it takes 10,000 horse-power to make one hundred tons of newsprint a day.

With reference to forest conservation his idea is to keep the forests free of fires. He believes that if fire can be prevented the forests will not need any reforestation.

From reports reaching the correspondent of the "Canada Lumberman" from all sections of the Province of New Brunswick lath sawing operations are exceptionally brisk. This is evidently making quite a difference in the size of the cut in many sections. From Fredericton comes the report that despite lateness of the season many applications are being received there for sawmill licenses.

Just what quantity of lumber will be cut in the province of New Brunswick this season is problematical but as near as can be estimated it will be somewhere in the vicinity of 400,000,000 feet. This is twice as large as last season and is very encouraging. In some sections men are still in demand in order to rush to completion big contracts. This great activity is attributed to improved market conditions. On Crown lands in the province it is estimated that over 200,000,000 feet will be cut.

For some time large quantities of pulpwood have been piled along the railways and other places in New Brunswick, but these are at last disappearing, having been bought up. From the northern part of the province it is reported that large quantities of pulpwood are now being cut. There is also a good cut of railway ties. One prominent lumberman, when asked recently about how many men are employed in the lumber industry in the woods this season said it would be quite hard to estimate accurately, but thought there would be at least nine thousand. This has helped to solve the unemployment problem in this province and has been the means of a livelihood for many.

Hon. C. W. Robinson, Minister of Lands and Mines of New Brunswick, while in St. John recently said that there is a great demand for lath and that extra large amounts are being cut. In connection with their manufacture he pointed out that they are being produced from the lumber that had been killed by the spruce budworm. Even with the huge amount being utilized for this purpose he said that large quantities of dead spruce and fir still standing could not be salvaged before it is past being of use for this purpose. Asked about reports that there would be an exceptionally heavy lumber cut this season, he said, that although it would be much greater than last year he did not expect that the season's cut would be more than normal.

Recent heavy snowfall was not greatly appreciated by lumbermen throughout the province as in many sections it has made teaming very difficult. The car shortage has proved to be a handicap to provincial shippers, who are daily clamoring for more. Senator F. B. Black of Sackville is operating two lumber camps this season in the Upper Aboushagan district in Westmoreland county.

A report from Harcourt N. B. says that lumbering operations in that district are being carried on somewhat more extensively than was the case last year. Bert L. Keswick has a large crew of men employed at his mill at Upper Main River, mostly laths. Robert Shirley has contracted with the Fraser Company to cut and get out to the river bank two million feet. James Fahey has a camp operating back of Birch Ridge and has twenty-five men there. He expects to be busy cutting and hauling until late in the spring. At Clairville, John Brown, has resumed operations about three miles back of the village of Adamsville. Adam Robinson, also of Clairville, has about forty men employed in his camp to the north of Harcourt. As a result of this the report adds that, with the increase in the number of men employed in the camps and the higher rate of pay which men are getting, life has assumed a much brighter prospect than it had a year ago.

Two timber berths were sold recently at the Crown land office in Fredericton. The upset price was \$20 per square mile and competition developed in each case. Two square miles on the St. Croix river, Charlotte county, was bid in for \$215 per square mile by Charles Anderson of McAdam. Two square miles on Mazeroll Brook, Cain's river, were bid in by the applicant, George M. Hayes, for \$25 per square mile.

### Mr. Payette is Mayor Once More

J. T. Payette has been re-elected Mayor of Penetanguishene, Ont., for the coming year. This speaks highly of the confidence re-

J. T. Payette, Penetanguishene, Ont.

posed in him and the esteem in which he is held by the citizens of the northern town. He has always taken an active interest in the welfare and advancement of Penetanguishene.

### The Agenda for Ontario Convention

The complete agenda for the three days' convention of the Ontario Retail Lumber Dealers' Association at the Prince Edward Hotel, Windsor, on Wednesday, Thursday and Friday, January 24th, 25th and 26th is now complete. The subjoined outline will be followed pretty closely and just how many of the items will be taken up from day to day, will be decided a little later on.

- Registration at the Prince Edward Hotel, Windsor.
- Meeting of 1922 Directors.
- Prayer by Rev. Robert Bennie of Leamington.
- Minutes of previous meeting.
- Welcome from Mayor Wilson.
- President's address.
- Treasurer's Reports—Association and Monthly Bulletin.
- Secretary's Report.
- Committee Reports:—
  - Membership.
  - Arbitration.
  - Legislation and Transportation, B. F. Clarke.
  - Insurance and Compensation; W. C. Laidlaw.
- Appointment of Committee on Resolutions.
- Reports from Districts and Branches.
- Trade Ethics Among Retailers—F. B. VanDusen.
- Our Plan Service—C. L. Bowes.
- Financing Dwelling Construction—S. Herath.
- Stopping a Big Leak in Retail Lumber Business—M. R. Bogart.
- Apprentices for Planing Mills—Robert Bennie.
- A. Shippers' Rating Bureau—K. J. Shirton.
- An Association Trade Mark—J. C. Scofield.
- Standard Sizes and Grades for Lumber—W. M. Tupling.
- Relations between Wholesaler, Retailer and Contractor—A. R. Sanders.
- Accident Prevention—George H. Arnott.
- Fire Prevention—Clarence DeFields—Fire Chief of Windsor.
- B. C. Lumbering Movie.
- Report of Committee on Resolutions.
- Discussion of Resolutions.
- 1923—Midsummer Outing.
- Election of Officers.
- New Business.

### Pulpwood Demand Shows Some Increase

The pulpwood business, insofar as it refers to the district of Quebec, has somewhat improved. Those engaged in the trade make the statement that the demand from the American mills is on the increase and that the minimum of transportation is more satisfactory since the arrangement was made between the American railroads to release Canadian cars. The Quebec dealers do not expect to make very heavy shipments of pulpwood to the United States mills this winter. They say that not more than fifty per cent. normal will be shipped and this largely to the Watertown, N.Y. district at a price of \$19 per cord, delivered at the mills.

In regard to the stock on hand at the various bases of supply, the dealers say that though ample for present demand, it is only one-half the quantity what it was in the past. The farmers did not cut pulpwood to any extent last summer on their woodlands owing to the slowness of demand and depreciation in prices, but it is anticipated that the prices will take an upward trend this winter to induce the farmers to cut a large supply of wood for shipment next summer. In the meantime the limit holders are preparing to cut a large quantity of pulpwood for the Canadian paper mills this coming season along with the big cut of logs for the manufacture of deals and square timber, for which they expect a good demand in 1923.

### Mr. Millen Observes Diamond Wedding

George H. Millen, president and general-manager of the E. B. Eddy Co., Hull, Que., and wife observed the diamond anniversary of their wedding on December 18th. The venerable couple are in good health and received the congratulations of a large number of friends on the 60th celebration of their long wedded life.

Mr. Millen, who is now in his 85 year, says that he and his life companion have yet to have their first quarrel. After fighting in the American Civil War, he came to Hull to repair and take charge of sawmill belonging to the late E. B. Eddy, with which organization he has been identified ever since, rising from an humble post to be the directing head of the firm and enjoying the esteem and respect of its 3,000 employees.

### Believe Building Papers Will Boom

The Strathcona Paper Co., Limited, of Strathcona, Ont., who are manufacturers of all grades of boxboard, building and wrapping papers state that they believe 1923 will be a good one and the outlook for building is bright. Prices for sheathing papers will, they think, remain about the same. The company are now putting their beater room and boiler rooms into shape so that they will run both machines during the coming year.

### Pulpwood Curve Shows Upward Trend

E. A. Sterling, vice-president of the Lincoln Mills, Limited who have mills at Merriton, Ont., and Little Cascapedia, Que., is in charge of the Woods Department of that organization. In a recent letter on the pulpwood production, prices and outlook, Mr. Sterling says:—

The improved trend in the pulp and paper market should logically increase production and create a strong demand for pulpwood at higher prices. Actually, according to my observation, this has not taken place to the extent which might be expected, although the curve of pulpwood demand and prices has shown a definite upward trend for some time.

There is considerable wood on hand at some of the mills, while others have reduced their inventory to the point where it must be replenished during the winter. On the whole, the pulpwood supply at the mills seems to show a great irregularity, but we are advised that the totals or averages of the stocks on hand are below normal.

Of the old wood on hand for sale, there are comparatively large supplies in some localities, but the wood has greatly deteriorated, and must be culled heavily to be acceptable. Moreover, this wood must be moved before spring, or it will have little or no value. Ap-

parently some of the mills are waiting for new wood rather than buying the old, which perhaps accounts for the lighter demand than would be expected in view of the increased production. At best it is a difficult situation to analyze, and we do not look for any marked change during the next two or three months.

### Evidence Heard in Pulpwood Suit

Evidence has been concluded in the proceedings in which the Chicoutimi Pulp Co., of Chicoutimi, Que., is claiming from thirty-two insurance companies \$1,020,000 for losses sustained through a fire which in July last destroyed about 28,000 tons of mechanical pulp in the yards of the company at Port Alfred which is not far from Ha Ha Bay. The insurance companies contend that the demands made on the policies were too high. An arbitration was, therefore, resorted to under the provision of the Quebec Insurance law. Beck & Co., of London, England, and the Molsons Bank are interested with the Chicoutimi Company in the insurance claims.

The arbitrators are the Right Hon. C. J. Doherty, K. C., chairman; the Hon. A. W. Atwater, K. C., and A. F. C. Ross, chartered accountant.

Port Alfred, where the fire took place, is a newly-constructed town at the end of Ha Ha Bay. It is the shipping point for the products of three of the largest sulphate mills in the Chicoutimi district, and the pulp which was destroyed was the production of a hundred days of work in the Chicoutimi and Val Jalbert Mills. The pulp was awaiting shipment to Europe.

### New Line Will Tap Much Pulpwood

A. G. Slaght, of Toronto, in an address delivered recently before the Kiwanis Club, said that the extension of the Temiskaming & Northern Ontario Railway from Cochrane to James Bay would be a paying investment. This line of 185 miles is being built by the Ontario Government at an ultimate cost of \$12,000,000. Water power potentially of 500,000 h.p. will be tapped as well as a country rich in pulpwood, timber, precious metals, etc. Mr. Slaght made the declaration that the pulp and paper resources along the new route justified the building of the railway and said that several large plants would be established in the north as a result of the new country which is being opened up.

### Will Pulpwood Embargo be Extended?

The embargo on pulpwood exports from Canadian Crown lands is likely to be extended to all forest lands in the Dominion, says Chief Forester William B. Greeley in the annual report of the Forest Service, United States Department of Agriculture, recently issued at Washington.

Should this be done, he adds, raw wood from Canada will be completely shut off as a source of supply for the paper industry of the United States. The paper mills of this country now draw one-third of their requirements from Canada, and northeastern mills have already been seriously handicapped by the present embargo.

"This illustrates," the report continues, "the hazard of becoming dependent upon foreign supplies. The rapid increase in lumber shipments through the Panama Canal foreshadows the time, in the near future, when the principle source of soft wood lumber for the entire nation will have shifted to the west coast and the average freight cost paid by the home builder or manufacturer will have advanced to a new and higher level.

"When the coniferous virgin timber of the far West is exhausted in its turn, if the principal source of supply shifts to Siberia or South America, the transportation conditions which control the present lumber market will become different only in degree. Further, as the sources of supply become more restricted and more distant from the principal centres of consumption, opportunities for competition are lessened; and temporary shortages due to bad seasons, labor troubles, or congestion of transportation facilities are more probable and more severe. Thus the conditions of the trade become more favorable to monopolistic control, to violent market fluctuations, and to high prices.

Strictly confidential. Full particulars and outline of proposition to be addressed to Post Office Box 284, Montreal." 1-3

**One Thousand Lumber Camps in Ontario**

Alex. R. White, of North Bay, Ont., who is a senior inspector for Ontario for the Provincial Board of Health, or superintendent of field work, is widely known in the forest products ranks throughout the northern part of the province. He has been engaged with the Ontario Government since December 1916. For some years previous to that time he was sanitary inspector for the town of North Bay and prior to that his occupation was that of a plumber and contractor. Mr. White is, therefore, well qualified for the duties which he is carrying out as provincial sanitary inspector. He is on the job all the while and has won the respect and confidence of not only those upon whom he calls but of the Department as well. He is responsible for all camps, mines, construction camps, sawmills and sawmill towns, and, in fact, all industries situated in the unorganized territories. He is of the opinion that there will be between 900 and 1,000 camps in Ontario this winter owing to the increased logging operations.

**Lumber Conditions in West are Better**

Eastern representatives of British Columbia mills report that the outlook is good and that there is a tendency to strengthen prices particularly on timbers, long joists and car materials. The coming year is expected to be a good one with a larger volume of turnover, and a more stabilized situation in general.

Orders coming forward now indicate that the mills will be forced to dip into their stocks that run a little better than selects. It was impossible for the mills to take these orders without increasing the price, as high grade fir logs continue on upper price levels. The mills are threatened with considerable of this car material require-

**Sawmill Wanted**

Good mill to cut by the thousand. First contract 1,000,000 feet, spruce at one set. To start immediately or not later than April 1st. Applicants must have good mill with trimmers and understand sawing. Box 74, Canada Lumberman, Toronto. 1-4

**For Sale Cheap**

Circular Sawmill, Building and Machinery; Steam Feed, suitable for Ties and Lumber.

also

Small two-storey Brick Factory, well-located, with or without woodworking machinery. Apply to John Harrison & Sons Co., Limited, Owen Sound. 24 T.f.

**WANTED****Timber Limits**

I am in the market for a first class stand of pulpwood or other timber. Must be within reasonable distance of good sawmill or pulpmill.

**Miscellaneous****LOG HAULERS****FOR SALE**

3 large Lombard Steam Log Haulers.  
1 small Lombard Steam Log Hauler.  
30 pairs Log Hauler Sleds.  
1 large Log Hauler Snow Plow.

All equipment in good condition.

Apply to

KELLOGG LUMBER COMPANY,  
24-3 Long Pond, Maine.

ment, and in almost every case the specifications call for fairly good lumber.

None of the sawmills is anxious to take on new business only on a much advanced price, as prospects for 1923 are exceptionally good.

To cut up the average camp run of boom to best advantage the mills must have Japanese, Australian and Atlantic seaboard business all running at the same time. The class of orders coming from these three points on the map cleans up every inch of lumber in a log to advantage and gives the sawmill operators returns for his work.

Already Australia has placed heavy orders for January and February cutting; the Atlantic seaboard trade is a certainty and Japan is reported to be forced out of Siberia and will be back in the market early next year for not only big squares but for more cut lumber. Japan has been logging on the coast of Siberia for some time under special contract with the Pri-Amur Government of Vladivostok, but as all contracts made by that Government have been canceled by the Reds, Japan is looking elsewhere for lumber.

Every mail brings inquiries for practically every size and grade of lumber on the list from Japan, but any firm business offering from this market is almost invariably \$1 to \$3 under the prevailing prices here. This condition is expected to be righted when Japan realizes the condition of the lumber world and that prices will be firm all next spring on the present schedule.

**EAGERLY**

If any typewriter can be said to do its work eagerly and enthusiastically, it's the light-running, quiet-running Royal. So smoothly and easily it runs that it seems actually to lead you on to better and faster work.

# Review of Current Trade Conditions

## Quebec Exporters Look for Good Year

The latest reports received by the Quebec lumber interests from their United Kingdom agencies, since the beginning of December, are to the effect that, although there are no outstanding features of importance to indicate a reaction in the market for the present, there are omens that the Canadian firms are likely to receive fair orders for spring shipment when the representatives proceed to the United Kingdom in February and March next. Should ocean freight rates become lower and allow the Canadian wood to compete with the Scandinavian and Russian forest products, a fair business may be expected for shipments from the port of Quebec during the 1923 season of navigation.

With the disappearance of the large government stock of wood and the absorption of other wood imported to England during the war for the construction of munition plants, (since utilized by the architects for other building purposes), there is bound to be a larger demand than that which has been experienced for the past four years. The imports to the United Kingdom during the year 1922 were mostly moderate and about sufficient to take care of deliveries.

Compared with the end of December 1921, stocks generally are lower, and within reasonable proportions. The demand for softwoods is looked forward to encouragingly, with values firm and slightly higher, in sympathy with Canadian selling rates.

It is made clear by the advice received from the agents abroad, that Canada should send its best wood for remanufacture to compete with the Scandinavian shippers. One of the strongest indications for a reaction in the British market for the better, is the appreciable disappearance of the stocks from the yard centres and the regaining of confidence by the importers, who are beginning to feel that the economic position in England and Europe generally will start to recover in the year 1923. This will restore confidence all around and relieve the tension of nervous hesitation which has permeated the British business life ever since the end of the war. The British public have confidence in the stability of the Bonar Law government, the amelioration of the political, economic situation, and look for a boom in construction next spring which will hearten other lines of business and come to the rescue of the unemployment question.

It would appear that the Quebec limit and mill owners have good hopes for 1923 by the large operations in the woods this winter. They do not hesitate to say that the cut of logs will be bigger in comparison to any year within the past decade. Of course the Quebec mill owners are not losing all their faith in the European markets. They expect to do an increased business with the United Kingdom although placing the bulk of their dependence on the American and Canadian market. The continuation of the boom which occurred in the United States last summer as well as the revival in Canada, created a big demand for Quebec lumber which at times taxed the capacity of the mills. In the city of Quebec construction took a new lease of life which cleaned out all the retail lumber yards of their respective stocks, and, judging from reports made by local architects and contractors, the building boom, which was commenced last spring, will be continued during the year 1923.

Last year 450 new buildings were erected in the city of Quebec to meet a shortage of 1,500 dwellings required to satisfy the demand of a growing population, thus leaving over 1,000 more to be built. In the meantime, the farmers in the rural districts of Quebec have become ambitious for larger and more up-to-date homesteads and have consulted Quebec architects and contractors respecting construction next spring. All these are signs to encourage the lumber industry and foretell a better business for the year 1923.

## The Lumber Outlook in Ontario is Promising

The lumber market is seasonably quiet at the present time and most members of the industry have been enjoying the holiday period and giving little thought to business other than the taking of inventories and finding out how stocks stand at the present time. Manufacturers report that mill yards contain from 10 to 50% less material this time than they did a year ago. There is said to be more stock in the larger retail yards than there has been for some time but some of the country retailers have allowed their supplies to run short. These will not likely be replenished until toward the spring months as a number of dealers desire to get a line on what the outlook of building and other activities is in their respective districts. Natur-

ally with the advent of cold weather, yard trade falls off considerably but retailers are for the most part hopeful and all declare that they have done a considerably larger business in 1922 than they did in 1921.

Naturally the question of prices comes up rather luminously at this period of the year, and while spruce quotations have gone kiting, values of other woods hold about the same as they have for the last few weeks a slightly firmer tendency. In the opinion of many there will be an increase on certain widths and lengths in which there is likely to be a shortage until the new cut comes on the market in July next.

It is believed that a good export business will develop and already many inquiries are coming to hand with respect to next season's activities. It is too early yet, however, to make any definite predictions regarding the lumber business as a whole. The outlook is bright, a feeling of trust and security prevails and 1923 is being heralded with a larger measure of hope and agreeable mental attitude than has been the case for the past eighteen months.

Logging operations are proceeding on a big scale and everything betokens that this year will show a record cut. Industrials are likely to buy hardwoods in a much larger volume and railroad items will call forth a large quantity of decking, sheeting, lining, framing and heavy sill material. It is announced that the Canadian National Railways will place many contracts for cars in the next few months. Other consumers will also use greater quantities of material. All concerns having business with lumbermen in the way of furnishing supplies for camp operations, sawmill equipment, driving, towing and hauling apparatus speak enthusiastically of the number of new orders that have been received and many more that in all likelihood will be closed within the next few weeks. These reports, along with the unmistakable faith which the lumber manufacturers themselves are manifesting in increased woods operations, show that unless all signs go astray, 1923 is going to be a good one in the matter of turnover and shipments.

In hardwoods there is daily evidence of the confidence which first found its expression in the uplift and expansion of this branch of the forest products business some four or five months ago. Since then the activities in every line have increased and there has been a free movement of stock, except of late, to large consuming centres across the border. The embargo on cars at many terminals has interfered seriously with the distribution problem. This, however, is gradually disappearing and after the first month it is not thought that much difficulty will be experienced.

Reports received from every quarter show that conditions have undergone an appreciable change in the lumber arena. This upward tendency, which, as stated, began definitely in the early fall, has followed a direct and uniformly aggressive course. If the rate of expansion continues throughout 1923,—as there is good reason to believe,—this year will make a showing in results that will be most gratifying to hardwood exponents, who, when the slump came in the fall of 1920, suffered the heaviest loss by reason of the greater value of their product and the undue inflation that was suffered accordingly.

1921 was a year of liquidation and losses, and it was not until well on in 1922 that some of those, who held heavy consignments were able to get rid of their high-priced stock and start again on a sound, replacement basis. The members of the industry, however, took the situation with equanimity and all wholesalers and manufacturers now voice the opinion that the market is characterized by a strength and tone which it has not felt for many months.

## St. John Market Conditions are Encouraging

Just at the present the trade at St. John is limited largely to water shipments via the liners to the English markets and also to the ports of Ireland, largely Belfast and Cork. Prices remain firm and unchanged ordinary rotary cut deals bringing for good stock \$30 for 9 x 3 and up, with 7 & 8 x 3 at about \$25. 6 x 3 is in good demand, bringing about \$24 with 5 x 3 and 4 x 3 at around the same prices on the mill wharfs or on cars, St. John rates of freight.

Rates of freight by liners to Great Britain and Ireland remain at 70 shillings. Considerable rotary cuts and many of the old purchases from stationary mills are going forward by liners. This includes both new and old. Certainly it is good for the manufacturers as if there was only the American market to depend upon, the price

View of Mills in Sarnia.

# BUY THE BEST

Retailers and woodworking establishments who like to get A1 NORWAY and WHITE PINE LUMBER always buy their stocks from us because we can ship them on quick notice. It pays to have the goods, but it pays better to "deliver" them.

We also make a specialty of heavy timbers cut to order any length up to 60 feet from Pine or B. C. Fir.

*"Rush Orders Rushed"*

## Cleveland-Sarnia Sawmills Co., Limited

SARNIA, ONTARIO

B. P. BOLE, Pres.    F. H. GOFF, Vice-Pres.    E. C. BARRE, Gen. Mgr.    W. A. SAURWEIN, Ass't. Mgr.

and demand would be less in a very short time as the Americans usually take advantage of such a situation.

Both import and consumption in England is small, but it is not decreasing and stocks are light. If present prices remain in both markets with care the manufacturers should be able to obtain a profit, 1923, while not large, will be better than the conditions pertaining in the last two seasons.

The American market remains firm, ordinary sizes of scantling, such as 2/3, 2/4, 2/6, 4/6, 2/7 is worth \$25. on cars Boston rates from St. John, while 2 x 8, 9 and 10 will bring \$32., same rates. These prices are for rotary cuts from portable mills, many of which are now beginning to get ready to ship as snow has put in an appearance in quantity enough for hauling to the stations along the tracks.

The only drawback in the American market is the embargo in effect on the New York, New Haven & H.R. Road, which taps sections west of Boston. This line is always a sore spot and when business is good is never able to handle lumber continuously. If this embargo were lifted, a good deal of stock now on hand, which is sold to these points, would be shipped.

2 x 8 is certainly scarce, and as above is bringing as much as 2/9, 2/10 and, in fact, is in greater demand.

Very few cuts are unsold at this time, as far as it applies to rotaries, while the production at present is estimated at all kinds of figures. It will depend entirely on the possibilities of financing and the winter conditions which govern production.

Wages for good men remain firm at \$40. Supplies are not any cheaper, neither has there been any material advance during the present two weeks.

As stated previously, logging will be somewhat more expensive than estimated in the early fall. So far as the writer is able to estimate, the cut has not reached normal. The early winter has not been cold enough to produce fast working in the woods and yarding has been rather slower than a year ago.

No mills are operating at St. John and will not be until spring of 1923. Local business has been fair but during the holiday season is usually very slack and, therefore, little difference can be expected over ordinary years. Prices have followed the upward trend of the export markets in spruce; otherwise they remain unchanged.

Laths are weaker. All the mills, which were estimated to be producing by this time, have not as yet struck a fast clip. Many are not yet sawing, slow erection and no snow delaying manufacturing. Building has not been retarded to any extent in New England and the open season has been the cause of heavy using of laths which to-day are selling at about \$6.25 St. John.

### Halifax Says Lumber Industry Shows New Life

Foreign markets, particularly the British market seem to be improving gradually, and British buyers are exhibiting considerable interest in this year's output, something that has not occurred for a number of years. The industry in all its branches seems to have taken on new life, and the last traces of pessimism are fast disappearing, along with the last of the old stock.

Practically all the larger manufacturers are preparing for an increased operation, and the output of portable mills promises to be of fair volume. Early in the season portable mills were going begging, but recently the demand has been so great, that all idle mills have been picked up, and a scarcity now exists, which will retard the winter's cut to some extent.

While lumbering operations have become quite general throughout the Province, it is not at all likely that there will be a big cut this winter, owing to the fact that it was very late when market conditions showed signs of improving, and consequently the winter closed in before much lumber had been logged ahead, as is the usual custom, and which precluded the possibility of over-production, in this Province at least.

Manufacturing costs are on the up-grade, due to the rise in the price of feed, and supplies of nearly every description, to the increased cost of stumpage, and to the fact that available timber is becoming scarcer and more remote from the railways necessitating a longer haul to the shipping point. While the supply of woodsmen is satisfactory, wages have advanced 40% to 50% and good men are getting from \$1.25 to \$1.50 per day. Weather conditions have been favorable for yarding in most parts of the province during the past month.

At present the British market is commanding most attention and shows signs of more energy than at any time since the period immediately following the armistice, and leads to the belief the deal trade will gradually return to normal channels. Enquiries are more numerous, and contracts have already been closed with English firms for part of the 1923 cut. One of the most gratifying features of the situation is the strength of Sterling, which coupled with the improvement of industrial conditions in Britain seems to assure a much brighter outlook for the coming year.

Although the American market is experiencing the usual seasonal dullness during the holiday season, the trend of prices is upward, with some sharp advances in certain sizes, which are very scarce, particularly 2 x 8 spruce. The fact that the British market will absorb a large portion of the 1923 output, will undoubtedly be reflected in improved conditions in the American market, particularly as the building programme across the line for the coming year is a large one. The railroads are reported to have mapped out very extensive programmes for the year 1923.

Owing to labor difficulties in the U. S. transportation facilities are badly congested, and rail shipments of lumber are handicapped by embargoes. It is reported that this condition will continue throughout the winter, so that it is probable that there will not be any great quantity of lumber moving until navigation opens in the spring.

The price of lath has weakened considerably, and many of the small mills that started up during the summer, are closing down.

### Ottawa Reports Good Outlook and Firm Prices

The advent of the holiday season had a decided effect on trading in the Ottawa lumber market, where the volume of business during the past two weeks was considerably less than during the opening period of December. Dealers attributed the drop in business as being entirely due to the season of the year and the holiday season.

The outlook for the new year they predicted was good and in some parts of the trade it was stated that a further advance in the price of some grades of spruce and the lower grades of white pine might be looked for. Prices during the closing part of 1922 remained absolutely firm.

One of the obstacles met by the trade during the closing period of the year was railway transportation and embargoes. Foreign cars were scarce and many points of entry into the United States had embargoes placed on them, owing to railroad congestion. Some shippers stated it was almost impossible to get permits to allow shipments to go through the points at which embargoes had been placed.

One firm which had several orders for immediate shipment, had the orders tied up on account of embargoes.

The woods operations up to the end of the year were reported to be progressing at a most satisfactory gate, and that ideal log making weather had generally prevailed during the fall months. Less trouble in connection with bush labor was reported. Several companies said that there had been a decrease noted in the number of men who jumped from one operating site to another, and on the whole "the boys" now in the camps seemed to be settling down. In centres where men had suddenly jumped to another occupation it was reported that the companies were now finding no difficulty in filling the places of the jumpers.

Conditions with the sash and door and the woodworking factories remained slow. The big woodworking factory of the Gatineau Co. Ltd., situated on Sussex street, which has remained idle for a year, has been leased to a company of private individuals who are manufacturing high grade bank and office fittings. Between forty and fifty expert workers have been given employment by the re-opening of the plant.

### Montreal Believes Present Values Will be Maintained

Considering the period of the year, trade in Montreal is very satisfactory. Orders have declined compared with, say, a month ago, but they are still good. According to some wholesalers, November was the best month for a considerable time, and far ahead of the same period in 1921. Although the volume of business showed a falling off, prices have maintained their recent advance. Any wholesaler with desirable stock has no difficulty in disposing of it and many inquiries are out for certain lines of spruce.

A majority of the wholesalers are looking forward to good business during 1923, the consensus of opinion being that the present level of values will hold for some time. The scarcity of dry stocks, particularly of spruce, is the basis for this opinion regarding prices.

Besides that, there is the prospect that activity in building will be continued and in that connection the Montreal Builders' Exchange is endeavoring to persuade architects and others to spread their construction over the year instead of confining it to what is termed the building season. It is argued that much work which is now done during the spring, summer and fall can be carried out during the winter, thus avoiding rush jobs and, from the contractors' point, spreading the overhead charges more evenly over the twelve months.

Lath continues to be softer, and if all the predicted production comes on the market, prices will probably go still lower. Hard-

## For Logging Small Timber Stands at a Profit

*The "Caterpillar's" \* field of usefulness is by no means limited to Logging. There is a "Caterpillar" \* of size and capacity for every power need. On farm or ranch, in the mining and oil industries, for building and maintaining roads, removing snow and doing other civic work—wherever tractive power and endurance are at a premium, the "Caterpillar" \* has no real competitor*

**CATERPILLAR**  
TRADE MARK  
**HOLT**

The Northern "Caterpillar" \* Logger provides the equivalent of a logging railroad. It also gives access to the scattered outlying tracts of timber too small to justify the expense of putting in a railroad. It does its own swamping and hauls over snow roads with the same pronounced success as on ice roads. With "Caterpillars" \*, jobbers and loggers of small stands can profit by the same economies gained by the big lumber and pulpwood manufacturers using large fleets of these dependable, all-purpose tractors.

Extremely powerful, yet compact in build, the Northern "Caterpillar" \* Logger is easy to operate both on and off the road. It turns in its own length and will work continuously in the most

severe winter weather. After a big snowfall, it quickly plows through the drifts and gets logging traffic moving. The three-speed transmission of the "Caterpillar" \* enables it to climb steep grades and to travel at high speeds when hauling on level roads or making return trips.

Whether used for swamping out roads, skidding logs, spotting and fetching out sleighs, or hauling trains, no other method is so practical and so economical as the "Caterpillar" \* method. Our motion pictures, exhibited on request, show the Northern "Caterpillar" \* Logger at work in the woods. We maintain complete stocks of spare parts. Write today for descriptive catalog.

*\*There is but one "Caterpillar" —Holt builds it*

*Holt branches and service stations all over the world*

woods are in fair demand with prices maintained on every line.

The exports of lumber from the port during the season just closed amounted to 61,544,000 feet, an increase of 22,272,000 feet over 1921. The latter year's total was the second lowest in the history of the port. For several seasons the tendency has been in the direction of smaller exports. Going back as far as 1903 we find the exports reached the large total of 225,468,000 feet, while in 1917 the shipments dropped to 30,303,000 feet, this being due to restricted shipping space. During the early part of the past season exports were on a comparatively large scale but they then fell away, the British market being unfavorable.

The shipments would have been larger but for the fact that one of the firms, who usually send considerable parcels from the port was engaged in exporting heavy stocks from the Maritime Provinces, the stocks being part of the British Government lumber sold for export. A feature of the season was the brisk demand from Ireland. The shipments of pine formed a very important part of the total exports from the port. Reports from the St. Maurice Valley indicate that a large cut of pulpwood is being taken out and that the companies will probably carry out their full programmes. The weather has greatly aided camp operations.

### Skilled Labor and Building Outlook

In a statement reviewing the building situation and outlook, Wilson Compton, secretary-manager of the National Lumber Manufacturers Association, Washington, directs attention to the marked increase in labor costs since last spring. Taking Washington as an example, Mr. Compton says that building costs have increased 30 per cent. and that \$15 a day has become quite customary in Washington for masons, bricklayers and plasterers. In New York as high as \$30 a day has been paid to skilled labor on some building contracts. The statement follows:

"The accumulated housing shortage since 1916 up to the present year was equivalent to approximately two and a half full years of new building on the 1910 to 1915 yearly average. At costs of construction prevailing last spring, between five and six billion dollars expenditure would have caught up this building deficit.

"Building costs have increased considerably since last spring in many communities. The general building costs in Washington, D. C., for instance, are about 30 per cent. higher than they were last fall and early last spring. This is largely due, however, to high labor costs inasmuch as the demand for skilled labor in the building trades has far exceeded the number of men available.

"There is every reason to believe that the fundamental demand for building materials still maintains and that it will continue for several years, with, of course, ups and downs. There will be periods of great building activity alternating with periods of semi-stagnation until the building shortage is substantially caught up. These alternations will be due rather to the building trades labor situation than to building materials. There is little danger that the comparatively small increases in building costs, due to increases in the cost of building materials, will have much to do with discouraging or delaying building as long as the costs of building labor are so excessive and erratic.

"I look for continued strong demand for building materials for a considerable period of years and I believe that lumber will have its full share in the effects of that activity. In fact, the comparatively greater labor costs in installing other materials in buildings than in installing lumber is definitely encouraging the substitution of lumber construction in many large communities, wherever admitted under the ordinances."

### New Regulations in Shipping Cheese Boxes

New arrangements have been announced by the Canadian railways for the shipment of cheese in the ordinary cylindrical cheese boxes, so as to avoid damage to the boxes of their contents in transit. The railways for some time had been complaining that cheese shippers were becoming too lax, factories sending out cheese in wooden boxes without anything to hold the lids down. The result was that frequently when some untoward event took place, the boxes might be tumbled with the result that the lids came off, and the carriers had to pay the damages.

Some time ago the railways notified the produce merchants here that they proposed to demand that these cylindrical wooden cheese boxes must have their covers fastened, with a wire completely encircling the box. This, they claimed, would not only prevent the lids from coming off, thus protecting the cheese from injury, but would also strengthen the boxes themselves.

However, this proposition was objected to by the shippers on the grounds of expense and inconvenience. They claimed that such

a ruling would mean that every cheese factory would have to be equipped with a special machine for wiring the boxes. They also argued that the wiring would not meet the objections of the railways, either with regard to the lids or to strengthening the boxes.

Following this a conference was held between representatives of the cheese shippers and the Railway Freight Association, with the result that the latter has just promulgated the following regulation scheduled to become effective on January 1st next:

"Cheese in wooden cylindrical boxes will not be accepted at the rates named in tariffs, unless the tops (covers) are closely fitted and securely fastened to body hoops by wire cord, metal straps, metal clamps, wire nails (not less than one inch long) or wedges."

This regulation has been forwarded to the various cheese-boards in Quebec and Ontario, and; it was stated recently, by the Railway Freight Association that so far only one objection had been received.

No objections were raised by the produce men here as to the regulations, as it was admitted that under previous provisions advantage had been taken by many factories to ship their cheese without taking any precautions to hold the lids on the boxes, which caused losses to the railways and frequent inconvenience to the consignees. The new rule, it was considered, leaves sufficient leeway as to methods, while making sure that the tops would be properly fastened to cheese boxes.

### Dryden Co., Will Extend Operations

The annual meeting of the Dryden Pulp & Paper Co., of Dryden, Ont., which was held recently in Montreal, showed that the outlook for the coming year is much better. It was stated that the loss for the twelve months ending September 30th last is only \$225,000. as compared with \$321,000. the previous year. The balance sheet revealed a working capital position which should prove adequate to provide for the expansion, as need arises, in the company's business.

F. A. Sabbaton, who is a director of the Laurentide Company and has a wide acquaintance and insight into the industry, has been added to the directorate of the Dryden Company. W. A. Black, president of the company, and J. B. Beveridge, managing-director, stated that conditions had now turned the corner and the shareholders had a better chance of realizing some of the high hopes entertained when the company was taken over. The outlook will be brightened by the installation of a mill for the turning out of more of the finished product, such as casing and wrapping papers, which department of the company's business was said to have been showing consistent profits, the losses having been mainly suffered though the manufacture of kraft pulp.

### Thunder Bay Paper Co., is Expanding

The Thunder Bay Paper Co., is the newest addition to the pulp and paper industries in Port Arthur. The former plant of the Kamistiquia Pulp & Paper Co., was purchased at auction early last spring by the Consolidated Waterpower & Paper Co., of Wisconsin Rapids, Wis. The company organized its Canadian subsidiary and immediately and appropriately named it the Thunder Bay Paper Co.

Many improvements have been carried out to the new concern of which Mr. Frank Youngman is the manager. A new wood room has been completed, 104x60 feet, of solid brick with steel trussed roof. Two wood barking drums, manufactured by the Canadian Barking Drum Co., have been installed. A new addition to the transformer room has also been built. The company is replacing three 450 h.p. motors with three 1,000 h.p. motors and six small transformers are being replaced by three larger ones. The plant, when the new additions are running, will consume between 2,500 and 3,000 h.p. of electric energy developed at Cameron Falls. The company is installing a new hydraulic press.

### Drawing to Show Timber Construction Details

In connection with the preparation of a new series of publications for architects, engineers and builders, the National Lumber Manufacturers' Association, Washington, has had some drawings prepared showing the details of timber construction for a one-storey mill building with a timber saw-tooth sky-light construction. An excellent example and good details have been secured and it is felt that this information will be of value to the architect, since this type of construction is difficult to detail.

It is also proposed to develop a number of plates on the use of heavy timber in railroad structure for distribution among the railroads, in the opinion that such information in proper hands, would turn the tide in favor of wood in the construction of shop buildings, blacksmith shops, round houses, etc. The life of heavy wood roof construction in blacksmith shops, or round houses, is five to ten times that of steel trusses.

### The Handiest Lumber Truck Ever Made

Just what you need for the lumber yard—a TUDHOPE-ANDERSON DETACHABLE LUMBER TRUCK.

Note these features: The wide-tired steel wheels cannot come off whether going forward or back. Axles (13 1/4") are high quality square steel. Tires are 4 1/2" wide. If wheel spokes become bent or broken they can be replaced—an exclusive feature of Tudhope-Anderson trucks. Wood parts are best oak, air seasoned and kiln dried, well ironed and strongly braced.

Get our prices.

**Tudhope-Anderson Co., Ltd., Orillia, Ont.**

### Mr. Moncion Forms new Lumber Company

J. B. Moncion, of Cochrane, Ont., has returned from cruising some lots west of that town which will supply the raw material for the Buskagan River Pulp & Lumber Co., Limited, which Mr. Moncion and others are organizing. The company expects to put on the market next summer a large quantity of rossed pulpwood and several hundred thousand feet of spruce lumber. The Buskagan River where their plant will be located, is eight miles west of Cochrane on the Canadian National Railways.

In regard to the activities in the north in the lumber and pulpwood line, Mr. Moncion says he believes production will be larger than last year but far from what was cut two or three years ago. Wages for men west of Cochrane are \$50. to \$70. per month and labor is scarce one week and plentiful the next. Most of the contractors say that it is difficult to find help that will stick to work all winter in the same camp. The men like to change often which causes a big risk for all the large contractors and entails much expense.

Mr. Moncion declares that the demand for lumber and pulpwood is better than it was a couple of months ago as prices went up a little but not enough to increase production to any large extent. Most of the settlers who are cutting pulpwood this year are doing it because they have nothing else to do and are able to make wages at it; that is about all they can get providing they have a short haul for the wood.

Prices around Cochrane for rough pulpwood are \$5. to \$6. per cord and Mr. Moncion adds, that at the prevailing wages it is almost impossible to make a profit on it. The quantity of lumber taken out in and around Cochrane will be about the same as last year and prices range about \$20. to \$22. per M. at the mill.

### New Brunswick Cut Will be Top-notch

Lumber operations being carried on in New Brunswick this year will yield a total cut of not less than four hundred and fifty million feet and it may run as high or more than five hundred million feet, according to the information gathered by the Gleaner, of Fredericton, N. B., from official and semi-official sources.

A comprehensive survey of the situation has shown that generally speaking lumber operations are being carried on upon a scale that is easily twice as great as last year and that it is really impossible to accurately state the full extent which operations may reach this winter, because men are still being sent into the woods where they are obtainable and the amounts which will be cut are thus being accordingly increased.

In addition to the large quantities of long lumber being taken out, as a result of the favorable market conditions, there is an almost unprecedented demand for lath from the United States at prices which are being maintained in spite of the growing output, while pulpwood, which has been piled alongside the railways and highways for as long as two years in some cases, is being rapidly bought up and especially in the northern part of the province large quantities of new pulpwood are now being cut. There is also a large cut of railway ties, fully up to the average, with present prices higher than a year ago.

The largely increased lumber operations have resulted in a demand for labor which has been more than the supply, and improved prices for lumber have made higher wages for woodsmen possible. Since the early operations were commenced wages have been considerably advanced and operators in this province have found it necessary to increase wages to meet the demands for woodsmen from this province from the province of Quebec and the State of Maine. While in some cases expert men are said to be receiving as high as \$65 per month, wages generally are said by lumber operators to range from \$35 to \$45 per month, as compared with \$26 to \$30 last year at this time. Public opinion does not look with favor upon lumber cuts greater than the natural growth, but as a matter of fact there are many millions of feet of lumber in the woods of the province which have been destroyed by the spruce budworm and other nefarious pests and which will be useless for manufacturing purposes unless taken out in the immediate future; estimates by provincial officials place the amount of this year's cut which will be of this infected material as not less than seventy per cent of the entire output.

Officials of the Forest Service of the N. B. Provincial Department of Lands and Mines estimated \$2,000,000 as the approximate distribution of wages to the army of men employed in New Brunswick's lumber woods this winter.

The estimate was made up on a basis of a maximum at present of not less than 10,000 men being employed with average wages, including board, amounting to \$50 per month per man. A census in 1919 showed 7,000 men then employed in lumber operations on the crown lands; a similar survey is now being undertaken.

In these days of keen competition, **QUALITY TELLS**, and so far as Lumber is concerned we believe we can safely say we can furnish **QUALITY** combined with the **BEST OF SERVICE**.

At the present time we have a considerable quantity of

# 1" No. 1 Common Cedar

E. F. Conway, 282 St. Paul St., Quebec, is erecting a new lath mill.

Joseph Tremblay, St. Felicite, Que., is contemplating the erection of a sawmill at a cost of \$3,000.

The B. C. Government during the five years ending March 31, 1922, have collected over \$7,000,000 in timber licenses.

The Northern Forest Products, Giscome, B. C., is a new company with a capital of \$25,000.

Jeffrey & Son, harness manufacturers, Port Perry, Ont., are contemplating the building of a factory at Whitby, Ont.

Duro Construction Co., Ltd., Main St., Hamilton, Ont., are preparing plans for a planing mill and sash and door factory.

E. C. Parsons, of the sales staff of the Canadian Western Lumber Co., Toronto, has gone on a business trip to British Columbia.

The Montreal Wholesale Lumber Dealers' Association has opened an office at 32 B Board of Trade Building. The membership is growing with the attendance at the weekly luncheons maintained.

The pulpwood traffic passing through the Lachine Canal this season totalled 139,725 cords, equalling 279,450 tons, compared with 108,950 cords or 217,900 tons in 1921.

E. T. Nesbitt, Limoilou, Que., has started work on a one storey sawmill, 131 ft. x 113 ft., and a factory building, one storey, 71 ft. x 111 ft. The two structures together will cost approximately \$15,000.

Henry Delunty, 19, son of Arthur Delunty, of Montreal, near Antigonish, N.S., was almost instantly killed when he was caught by a belt of a saw mill. He suffered a fractured skull and other injuries.

From Northern Ontario comes word that men are still scarce for the pulpwood camps and that operators are offering higher wages all the while in order to secure sufficient help. As high as \$50 to \$60 a month is being paid in some instances.

C. S. Anglin, of the S. Anglin Lumber Co., Kingston, which is one of the oldest established businesses in Eastern Ontario, has been returned by acclamation as an alderman for Cataraqui Ward, Kingston.

The new railway which has been built by the Abitibi Power & Paper Co., of Iroquois Falls, for the hauling of pulpwood, is now in operation. The line runs from Hughes to the river and quick work was carried out.

Building trade employees at London, Ont., are applying to contractors for an increase in wages running from five to fifteen per cent, in order to readjust them before the contracts are made in January.

R. G. Chesbro, of Toronto, who has been spending some time in British Columbia, has returned East. Mr. Chesbro is greatly improved in health and is now feeling better than he has for many months.

The Port Dover Planing Mills, Port Dover, Ont., was visited recently by fire which caused \$7,000. damage. The fire started in a section which was completely destroyed, but an adjacent building which housed the machinery was saved, although only separated by a twelve-foot alley from the blaze.

The sale of the assets of the Prince Rupert Pulp & Paper Co. to the Prince Rupert Holding Co., was approved by Mr. Justice Morrison in Vancouver last month. The sum paid was \$300,000 and the assets include the mill and plant and a number of very valuable limits.

Quebec Hardwoods Limited, 211 McGill St., Montreal, have recently taken over the interests of J. W. Harding & Co., of that city. C. S. Harding is the president of Quebec Hardwoods, Limited, and J. W. Harding managing-director. Herbert J. Brinsmead, of London, England, is a director of the company.

George M. McKee, president of the Canadian Pulp & Paper Association, who was formerly managing-director of the Donnacona Paper Co., Donnacona, Que., is leaving Canada, having become associated with the new organization which has purchased the Ogdensburg Paper Mills, Ogdensburg, N. Y.

The Montreal Hardwood & Flooring Co., Limited, have been appointed members of the National Hardwood Lumber Association who now maintain five inspectors in Toronto. H. F. Holton is the head of the inspecting staff and his assistants are J. A. Cadenhead, J. E. Banks, J. Jesdahl and Robert J. Schaefer.

It is reported that the Fraser Companies, of Edmundston, will

increase their daily output from 1,000,000 to 1,300,000 laths daily. Their market is largely in the United States. Estimates for the companies' cut of long lumber this winter range to upwards of 150,000,000 feet, and in addition large quantities of pulpwood for their mills at Edmundston and on the Miramichi.

Isaac Hale has been appointed Ontario representative for the Mark de Cew Lumber Co., Winch Building, Vancouver, B. C., and has entered upon his new duties. Mr. Hale has been in the lumber business for thirty years and is well versed in western woods. The Mark de Cew Lumber Co. handles all kinds of Coast products but is paying particular attention to pine.

The total of forest products exports from British Columbia for the first nine months of 1922 amounted to 195,000,000 feet, an increase of 73,000,000 feet as compared with the corresponding period of last year. Business with California and the Atlantic coast was very good, and was largely responsible for the size of the total. The prospect is for further trade with the Orient and Australia, and lumbermen are looking forward with much encouragement.

Sault Ste Marie is negotiating for several new industries, one of which is a large American firm which will use the product of the pulp mill. It is announced that it is a company which is strong financially and that there is a great demand for its products. Power and a site are required for the industry and an assurance has been received that these are available without cost to the citizens or to the city of Sault Ste Marie.

The Buckley interests at Massett, Queen Charlotte Islands, are entering the pulp and paper business and, amalgamating recently with Los Angeles capital, have put freighters on the run between the islands and California taking raw lumber south to be finished at the mills of the company. Pulp is to be made at Massett and shipped to a paper plant the company is to build at Los Angeles, according to the latest reports.

William Hamilton Co., Limited, of Peterboro, recently closed a large contract with the Howard Smith Paper Mills, Montreal, for a complete haul-up and slasher, pulpwood conveyor and transmission equipment for their new cutting-up and barking plant at Gaspé, Que. The company are also supplying other installations of slashers, pumps and Jordan engines for various concerns on the Pacific Coast. Prospects for new equipment in the pulp and paper arena have shown a decided turn for the better of late.

Lumberjacks and experienced loggers are so scarce in the west that the British Columbia camps are said to be offering premiums on the prairies for skilled men. All camps in Lake of Woods and Lake Winnipeg district are crowded, with wages advancing and no idle lumbermen in Winnipeg. There has been no particular market on the prairies this summer for building material, but large quantities of mill products have been shipped over the line. From the quantity of logs the mill owners are taking out they evidently expect a big demand in the spring.

The Canadian Western Lumber Company, Fraser Mills, B. C., reports a marked increase in the volume of lumber manufactured in October at 13,010,400 feet, compared with 7,845,783 in October, 1921. Lumber sold totalled 8,246,438 feet, compared with 6,707,526, and price realized \$216,574, against \$155,540. Aggregate lumber manufactured from January 1 to October 31 totalled 98,591,170 feet, compared with 79,103,988, and lumber sold 100,857,273 feet, against 75,941,562. Sales in this period amounted to \$2,404,869, against \$1,990,601.

The organization of a new company known as the English Lake Lumber Company, Limited, has attracted considerable attention in the Lake Frontier Lumber district in the province of Quebec. The operations planned by the new company are of an extensive nature and it is understood that the limits involved are in the neighborhood of one hundred and ten square miles, including the mills and limits formerly owned by Messrs. Murray and Gregory. The officers of the company are as follows: President, Charles Bienvenu, of Disraeli; vice-president, B. C. Howard, Sherbrooke; manager, Philip Bienvenu, Disraeli; secretary, Charles B. Howard, Sherbrooke; treasurer, J. W. Bienvenu, Disraeli, Que.

In a message published in a recent bulletin of the N. H. L. Association, John W. McClure, of Memphis, Tenn., the president, says that the past year was a most active one and that the Association is in the strongest position both actually and potentially that it has ever occupied. Among other things Mr. McClure says,—"There is every evidence of the confidence and respect which our Association enjoys among all branches of the hardwood industry. We are constantly on the alert to improve our service. A recent meeting of our board of managers was rich in accomplishment and displayed a unified purpose of progressive force which is a guarantee to the soundness of our institution and the principles for which it stands. The new year holds much of promise both as to business prospects and the further progress of the Association."

# The Carriage You Are Looking For

## Our No. 1 Size

**CARRIAGE**—Has three head blocks, as shown in cut, usually set 9 and 6 feet apart, will be placed any distance apart to suit purchaser. Knees open 38 in. from saw, and is fitted with Knight or Peel dogs, as desired. Taper movement on each knee. 1 15-16 in. steel set bar with steel pinions and coil spring receder, and friction lever brake for stopping knees where required. Timbers are 5 x 6 in., or heavier if desired, well bolted and braced. Diameter of truck wheel, 12 in. Axles 1 3/4 in. diameter, and extend clear across carriage, are furnished with self-oiling bearings. Front block is fitted with timber rule, placed as desired; 54 feet of V and flat track furnished with each carriage.

**SET WORKS**—As shown in cut, is made up of ratchet wheel 12 in. diameter, 4 in. face, with set lever carrying 7 steel pawls of varying lengths; also, same number of check pawls set in quadrant. Both sets of pawls are disengaged from either side of carriage when required to recede knees. This is a positive set, without lost motion.

**FEED WORKS**—As shown in cut, consists of 16 x 12 in. drum, with spur gear keyed to shaft. Pinion or friction shaft in saw frame engages with this gear. Cable takes two or three turns around drum, and is passed around end sheaves and attached to carriage. We also furnish 26 in. drum with internal gear in place of 16 in. drum when desired.

## Sylvester Hand Car Engines Will Change Your Hand Cars into Motor Cars

A Logging Camp is not complete without one or more. Backed by years of successful Railway Service.

JUST THE THING FOR TRANSPORTING MEN AND DOING LIGHT HAULING  
The old hand car is slow, expensive to operate and entirely out of date. Sylvester equipped cars will pay for themselves in a short time. Use them to transport your men and do your light hauling. You will be surprised at the amount of work they will do.

### WE MANUFACTURE

Hand Car Engines.  
Section Hand Cars.  
Gasoline and Oil Pumping Engines.

Motor Cars built for Engine Drive.  
Push Cars or Trailers.

# ATKINS

## STERLING QUALITY SAWS

**As Demand Con-  
tinues to Increase**

**It will not benefit you--**

unless your mill is equipped with  
the right kind of Saws, Saw Tools  
and Machine Knives.

Now, there is only one best brand  
to buy; it bears the name

**ATKINS**

Specify your Saws, Saw Tools and  
Machine Knives by name. Say  
"ATKINS." Costs no more in the  
beginning and saves you money in  
the long run.

Leading manufacturers of Saws, Saw Tools  
and Machine Knives, also Atkins-Coleman  
Feed Rollers. Use Acrolite and Ferro-  
lite Wheels for your saw gumming and  
knife grinding. Increase your belt effi-  
ciency by using Cantol Belt Wax.

## Bernard's WOOD SPLIT Pulleys

The  
Standard  
of  
Service

**T**HESE famous pulleys are designed and constructed to give the most efficient service throughout their long life. They combine many special features with unusual care in manufacture. Stock used is all thoroughly seasoned and dried, rigid inspection preventing faulty materials from being used. The result is a pulley which will stand up under the severest working conditions.

*Our line of clutches and locking collars is equally famous. Let us send you full information on your requirements.*

# Better Food—Better Work

It is generally acknowledged that a well fed man makes a better worker. Certainly, he is a contented man, and no one will deny that morale is a big factor in production.

When you use our camp provision service, you can count on reliability both in the quality of our goods and in the service we give. The reasons are: Many years of experience, a reputation for quality, unequalled facilities, and an organization second to none for efficiency.

*Why not let us feed your men?*

## Let Him Be the Judge

*and Swift's Products will be his choice*

Old-timers in the lumber camps are keen critics of the food served and many a time have slipped away to another camp because the grub was better. Their preference for Swift's products is thus high tribute to the quality.

But the camp operator must consider other things. Supplies ordered must reach him promptly, in good condition, and without substitution. To ensure him this service, branches have been established from coast to coast, each carrying a very large stock ready for immediate shipment.

Why not take advantage of the perfect facilities offered you by the most up-to-date Packing House in Canada? One order will convince you of the superiority of Swift products and service.

# FIRE BRICK AND CLAY

We make several brands of fire brick by every known process of manufacture from a selection of various high grade Pennsylvania clays. This enables us to furnish the best for your boilers, dutch ovens, refuse burners, kilns, etc. We specialize in fire brick for power plants and if you will advise us whether your boilers are hand fired or stoker fired and kind of fuel used we can then give you the proper brick for your work.

We carry a large stock of our different brands in various sizes and shapes in our Hamilton warehouse which enables us to ship at once.

We manufacture the following well-known brands:

**"Elkco Special," "Elk Steel,"**

**"St. Marys," "Keystone" and "M.D. Elk"**

**CARTHAGE, N.Y.**

## Gerlach Modern Machinery Produces Cheaper and Better

Tight and Slack Cooperage. Stock for Barrels, Kegs and Tubs, ready to set up into non-leaking packages of 5 to 120 gallons liquid capacity, or for semi-liquid and dry materials up to 800 lbs. weight. We manufacture machinery for sawing, jointing, planing and crozing staves; for sawing, jointing, dowl-ling, planing and circling heading.

### MODERNIZE YOUR PLANT

Scrap Machinery invented before the Civil War and install a Gerlach Outfit that will make Tight Barrels that are tight, from any strong non-porous timber.

### BUILD

Barrels with perfect joints that will not leak; a product that is infinitely superior to the tin and iron near barrels now being experimented with. Wood is tasteless, stainless and rustless and being a poor conductor of heat or moisture, keeps its contents in their original condition.

### CYLINDER SAWS RESTEELED

### MODERN BOXBOARD MACHINERY

The Linn Logging Tractor Hauling 63½ cords of Pulpwood

# THE LINN LOGGING TRACTOR

The Canadian Logger has evidenced his appreciation of the value of the Linn Logging Tractor for log haulage.

This winter the Linn Logging Tractors will be found operating as far East as Newfoundland and as far West as the Port Arthur District, and as far North as Cobalt.

It is our hope that every Canadian Logger will this winter avail himself of the opportunity to see Linn Logging Tractors in operation during the haul.

As Linn Logging Tractors will be in operation this winter within easy reach of every locality in Ontario, Quebec and Newfoundland, any operator will be able to see a Linn Logging Tractor operation without loss of much time from his own operation.

We will gladly supply any interested operators with the name of his nearest neighbor who is using Linn Equipment.

—Logging Department—

# Why 255 Waterous Band Mills Have Been Purchased

## No. 6 Tension Device

We would like particularly to draw your attention to the tensioning device supplied on this mill, and for that reason attach the diagram shown.

From it you can see why the "New Model" Mill has earned a reputation for being easy on saws and why we make our tensioning device a strong talking point in all our references to the mill. First of all, its construction is such that the device as a whole will act independently of the position of the upper wheel. You will notice that the fulcrum points throughout are knife edges and that the tension weight is not solid but is a hollow casting supported on an internal spring. By using the knife edged fulcrums we obtain extreme sensitiveness and the spring within the tension weights increases this. When a sudden vibration or jar is thrown on the mill the extra tension is not transferred momentarily to the saw as is the case with rigidly connected weights where the weights themselves have to move for every jar or vibration—but the shock is smoothly taken up and balanced by the springs.

That this tensioning device is successful in prolonging the life of saws used on the mill, this extract from a letter from one of our customers will indicate. He writes:—

"We have sawed over 20,000,000 feet this past season, our logs run about forty to the thousand, and have not broken or cracked a saw."

Molson's Bank Building, Vancouver

Winnipeg, Man.

for your buyers of

# WHITE PINE

As specialists in White Pine, we are able to offer unusually attractive prices and service for this lumber. There is no finer pine to be found than that which our La Cloch Hills limits yield and the care taken in its manufacture ensures lumber of the highest grade. It is remarkably free from defects and is certain to please the most critical of your buyers. One order usually makes a steady customer.

Before ordering your requirements in lumber, ask us to submit quotations. Orders and enquiries receive our prompt and careful attention.

We also handle the well known

**"TEN-TEST" SOLID FIBRE BOARD****A Permanent Lumber  
Service**

**A**FTER several years of inactivity we are now cutting on our modern fully equipped mills at Manistique and Little Lake, Upper Michigan. The timber behind these mills was purchased many years ago by the Stack interests from the then "unlimited" supply. Its quality, particularly the maple and birch, is the envy of northern mill men among whom this tract is famous.

This timber will run the mills to full capacity for fifteen to twenty years. The 40,000,000 feet annual cut will run:

15,000,000 ft. maple annually  
6,000,000 ft. birch annually  
2,500,000 ft. beech annually  
2,500,000 ft. elm annually  
900,000 ft. basswood annually  
200,000 ft. ash annually  
6,000,000 ft. hemlock annually  
3,000,000 ft. white pine annually

the balance in Spruce and Tamarack.

Our exceptional service, grades, and manufacture will be maintained.

"Low freight rate shipments by water to Toronto, Montreal, Owen Sound, Port Arthur, and other Great Lakes and St. Lawrence River Ports. Conveniently located also for rail shipments to inland points by C.P.R. or Soo line."

We will be pleased to hear from old friends and from new ones who can understand and appreciate what permanent connection with such a source of supply would mean.

# BUY BRITISH COLUMBIA Red Cedar Shingles

The life of a British Columbia Red Cedar Shingle Roof can almost be gauged by the life of the nail with which the shingle is nailed in place. Judging from available data, the average life of the ordinary steel wire nail, which has been in such common use, is only from seven to twelve years. Some wire nails will last longer, depending upon the condition of exposure, climate and similar features, but considering our climate as a whole, at the end of from seven to twelve years a large percentage of wire nails will have rusted either completely through or so extensively that the first strong wind will complete the work. The shingles that have been held in position by such nails are then free to work down, permitting rains or melting snows to leak through and damage the interior of the structure. Examination will disclose that the fibre of the shingle itself is still in perfect condition, and a leaky roof, in the majority of occasions is due entirely to the use of faulty nails, but the average home owner, placed at such inconvenience, will not stop to reason this out and the poor wooden shingle comes in for more unjust abuse.

There are several kinds of nails which experience has proven will give lasting satisfaction, and the wise dealer will advise his customers of these satisfactory nails. A pure zinc shingle nail meets all the demands of durability required. Its principal drawback is its high cost and a slight tendency to bend under careless driving. Galvanized wire nails theoretically are rust proof, and if the galvanized coating is properly applied, and of sufficient thickness, such a nail will last as long as the shingle it holds in place. The life of this shingle roof, properly applied with these nails then is from 40 to 50 years. Pure iron nails, or the old cut or wrought nails are ideal but difficult to secure. Copper nails also constitute a perfect shingle nail.

# A Heavy Capacity Resaw

Yates Type H6 Horizontal Resaw is the world's finest machine for resawing slabs and flitches at high feed rates. It is well fitted for resawing small split logs into fine accurately cut lumber.

Construction of the Yates H6 is most rigid, and includes every feature which aids in permitting the machine to produce such exceptionally fine work at lowest costs. It is the most simple operating resaw on the market.

A complete illustrated description of this machine will be sent you upon request.

## MANUFACTURING COMPANY'S PLANER KNIVES

ESTABLISHED  
1832

Will cut two or three times as long on hardwood or hard work. The Simonds Welded High Speed Steel Knife is a new knife. Made by a new process and successful in every respect. It has a cutting edge of High Speed Steel Welded to a soft backing. When we say "Welded" we mean just that—not brazed as has heretofore been the method in making Carbon Steel Knives. This knife promises to be a big money and time saver for knife users. There is no change in machines required to run this knife. Simonds High Speed Steel Knife will last from three to five times longer than the ordinary Carbon Steel Thick Knife.

*Investigate this knife. Write today*

# The Clark-Pacific Type Band Mill

## Let this Picture tell the Story!

To the progressive Saw Mill operator this picture of the Clark Heavy Duty Pacific Type Band Mill speaks volumes for productive efficiency. The massive design, the obvious power convenience, and many exclusive features are strikingly apart. NOTE the great depth of Base, the quick opening lower guide buried in Husk, the stability of the columns; non-overhanging base, safety upper guide, wheels tilt from front or rear, tension the most sensitive and best chain or collar oiling water jacketed interchangeable boxes. No vibration, simplicity and accessibility, extra large hubs. The heaviest Band Mill built, holds all cutting records. Built in sizes of 6 to 11 ft. Once you know a "Clark" Band Mill you won't be satisfied until you own one. Catalogue will be mailed on request.

## The Effect of Growth Rate on Strength of Softwoods

By

J. D. Hale and M. J. Brophy

Dominion Forestry Branch

Forest Products Laboratories of Canada,  
Montreal

Everyone, who has used an axe, knows the layered structure of wood. From the beginning of its life as a seedling until its vital activity ceases, a tree increases the girth of its trunk, branches and roots every year by covering its previously-formed wood with a new layer. In the wood of Canadian trees, the successive layers are distinctly visible on a transversely-cut log as a series of concentric rings. As each ring represents the amount of wood added during a year's growth the layers are commonly termed "annual rings." (See Fig. 1).

Wood is composed of cells which are chiefly fibres. The fibres vary in length from about one millimetre to six or even eight millimetres. This length may be from twenty-five to one hundred and fifty times the diameter of the fibres. Wood-fibres are hollow tube-like structures with ends which are closed and more or less blunt. Packed close together with their long axes parallel to the axis of the trunk or branch whose wood they compose, the fibres and other wood-cells, by the combination of their own properties, determine the properties of wood.

If wood-cells were all of uniform dimension, wood-structure would appear homogeneous and the different annual layers would not be distinguished from each other. The seasonal changes in northern latitudes, however, exert a marked effect upon the cell growth, an effect manifested by a decrease in size of those wood-cells which are formed near the latter half of the growing season.

In the Springtime growth is fast and the fibres which are formed at this time have a large diameter, but, as has been noted, the fibres formed later in the season (during the summer) are of small-

Fig. 1—Cross-section of balsam fir log

er diameter and have thicker walls. The wood formed in summer being composed of thick-walled fibres with comparatively small cavities, is denser and harder than the wood formed at the beginning of the growth period. As during the winter the tree is dormant and no additional growth takes place the successive annual layers are sharply defined by the contrast in texture and color of hard summerwood of a previous ring which abuts the softer springwood of the subsequent year's growth.

### Rate of Growth Shown By Width of Annual Rings

Only softwoods will be discussed in this paper. Softwoods form the bulk of Canadian forests and include all the needle-leaved trees, usually spoken of as "evergreens" or conifers. Their structure is simpler than that of hardwoods and for this reason they are best discussed separately. The annual rings of this group are often more strikingly divided into springwood and summerwood than is the case with hardwoods and, therefore, the softwoods offer more favorable material for studies in growth-rate.

It is obvious that a tree, which continually forms wide annual rings, will increase its volume more rapidly than one which adds only narrow layers. Wood with wide rings is therefore spoken of as fast-growth material and that with narrow rings is said to be slow growing. Fig. 2 shows samples taken from Douglas fir timbers having different rates of growth. The end section of the 1½ inch board, which was taken from the centre of a tree, shows fast growth while the section of a 3 inch by 3 inch tie shows narrower annual rings denoting much slower growth. The summerwood shows clearly in both as dark bands defining each annual layer. The scale, which reads in inches, gives some idea of the actual proportions.

It is commonly believed that slow-growth softwoods are strongest and for certain purposes specifications require that there shall be not less than six rings per inch. The illustration (Fig. 2,) will serve to show that there is not only a greater number of bands of summerwood per inch in the slow growth specimen but also that the total amount of summerwood (usually expressed as per cent. of total wood) is greater in the slowly grown than in the fast grown wood.

Fig. 2—Douglas fir with different rates of growth

Fig. 3 shows photographs at a magnification of 25 diameters of thin transverse sections of Douglas fir with various growth-rates. The section with wide rings shows a relatively smaller amount of summerwood than the section with rings of medium width. The wood of medium growth, as well as possessing more numerous bands

Fig. 3—Transverse sections of Douglas fir (magnified) slow, medium and fast growth

of summerwood, has a greater per cent. of its area occupied by summerwood than the fast-growth section. The section with narrowest rings however, although its summerwood bands are the most numerous of the three, has the least total area of summerwood.

It is a general rule for those softwoods which possess heavy summerwood that fast-growth timber has only a small per cent. of summerwood, medium-growth timber the maximum amount and very slow growing timber an amount which is less than the maximum achieved by medium growth.

#### Summerwood Gives Strength to Timber

The importance of summerwood in softwoods may be better appreciated if it is realised that the bands of thick-walled fibres add much more weight and strength to the timber than the relatively thin-walled fibres of the springwood. Fig. 4 demonstrates the effect of summerwood-content upon the weight of the timber. The specific gravity of a shipment of representative Douglas fir (*Pseudotsuga*

Fig. 4—Relation of specific gravity to rate of growth in Douglas fir

mucronata) from the Pacific Coast is plotted graphically against the growth-rate (rings per inch).

The curve shows what the photographs demonstrated, namely, that Douglas fir of medium growth-rate, with the greatest proportion of summerwood, is heaviest; and that extremely fast or slow-growth timber, having less summerwood, is consequently lighter. The tests whose results are embodied in these curves, were made by the Division of Timber Tests at the Forest Products Laboratories of Canada, Montreal, in the course of their work of testing Canadian timbers.

It has long been recognized that the strength of wood is approximately proportional to its weight. Fig. 5 shows another curve for Douglas fir with "maximum crushing strength" substituted for "specific gravity." The strength curve for Douglas fir here follows the same proportional variations as the specific gravity curve. Both curves have their maximum at the same rate of growth.

Besides the curve for Douglas fir there are others for red pine and spruce respectively. These curves are from the results of tests on eastern species, red or Norway pine, white spruce, red spruce and black spruce. The specific gravity curves for pine and spruce have been omitted, but they correspond to the curve for strength just

as in the case of Douglas fir. The figures of maximum crushing strength are for compression parallel to the grain and read in pounds per square inch.

#### Anatomy of Spruce and Fir

In connection with these curves it will be well to consider the anatomy of spruce in comparison with that of Douglas fir. Fig. 6 shows transverse ends of spruce and Douglas fir timbers. The general appearance of the two woods shows clearly that the summerwood of spruce is much less strongly marked than is the case in

Fig. 5—Relation of the strength of wood to rate of growth

Douglas fir whose broad bands of summerwood sharply accentuate the annual rings.

In Fig. 7 are represented three transverse sections of spruce magnified 25 diameters, demonstrating fast, medium and slow-growth. The fast-growth section has least summerwood, the medium-growth specimen has more and the slow-growth piece has most of all. The condition is in keeping with the strength-curve for spruce which increases somewhat with decreasing growth-rate as far as the curve has been plotted.

The general rule can be stated that softwoods with broad bands of summerwood, whose transition from springwood is abrupt, have an optimum growth-rate for the production of strong timber which is faster than the optimum rate for softwoods whose summerwood is inconspicuous. The point on the curve for spruce at which the maximum crushing strength would decline, has not been reached. Red pine however, a species whose summerwood content is intermediate between spruce and Douglas fir, has its greatest maximum

Fig. 6—End grain of spruce (upper) and Douglas fir (lower)

crushing strength at a rate of growth intermediate between the optimum for Douglas fir and the optimum rate for spruce just as would be expected in accordance with the general rule.

#### Summary of Interesting Investigation

The results of investigating the structure and mechanical properties of wood at the Forest Products Laboratories of Canada indicate that the growth-rate has a very great effect on the physical properties of timber. It is probable that differences in weight of wood from various parts of the tree are due chiefly to differences in growth-rate. From the discussion of rate of growth in softwoods we may draw the following conclusions:—

- (1) The strength of timber is approximately proportional to its density.
- (2) The density of timber (and therefore its strength) depends, to a great extent, upon the rate of growth of the tree which produces it.
- (3) There is an optimum growth-rate for the production of the best quality.

(Continued on page 52)

# Montreal is Ready for Canadian Lumbermen

*Big Gathering on January 24th and 25th Will Hear Timely and Practical Addresses on Many Matters—Splendid Programme of Entertainment Provided—Metropolis Will Extend Cordial Welcome*

Every preparation has been completed for the fifteenth annual meeting of the Canadian Lumbermen's Association which will be held at the Mount Royal Hotel, Montreal, on Wednesday and Thursday, January 24th and 25th. Secretary Hawkins, of Ottawa, says that the delegates are coming from far and near. There will be an unusually large representation from across the border. The management of the hotel has made every preparation for the comfort and convenience of the visiting lumbermen and their wives and the forthcoming assembly will stand out as the most signally successful and beneficial in the history of the organization.

Several new features are to be embodied. One is that more time will be given up to a discussion of prospects during the coming year, production, export situation, manufacturing costs, inspection, transportation, etc.

The ladies will be entertained to a theatre party and a tobogganing party, as well as a drive around the mountain. The banquet of course, will take place on the second day of the convention, Thursday, January, 25th. The speakers on that occasion will be the Hon. Walter Mitchell, K.C., M.P., former Provincial Treasurer of Quebec, and Mr. Gordon Laing, Dean of the Faculty of Arts, McGill University.

The Montreal wholesalers are also seeing that nothing is left in the matter of entertaining the visiting lumbermen and, the well-known hospitality of the Canadian metropolis will be maintained. Competent committees are at work completing all arrangements for the convention and details are being rapidly rounded into shape.

E. H. Lemay is chairman of the General Committee; J. S. Bock of the Finance Committee; J. G. Shearer of the Entertainment Committee; G. C. Goodfellow of the Dance Committee; C. Villiers of the Luncheon Committee. The members of the Ladies Committee are,—Mesdames J. B. White, D. H. McLennan, Arthur H. Campbell, A. E. Grier, J. G. Shearer and C. Villiers.

The several retiring directors this year are,—G. E. Spragge, Toronto, W. J. Bell, Sudbury, Duncan McLaren, Toronto, Sir Wm. Price, Quebec, Arthur H. Campbell, Montreal, W. B. Snowball, Chatham, N. B., and Rufus E. Dickie, Stewiacke, N. S. All of these are eligible for re-election and it is believed that the majority of them will be again chosen to serve another three years on the Board.

Regarding the next place of meeting, it is said that it will probably be in Quebec City or, possibly, St. John.

Everything points to the fact that the 1923 convention of the Canadian Lumbermen's Association will be a pleasant, profitable and entertaining occasion, and all lumbermen, who possibly can, should make a point to be in attendance and bring along their wives and daughters. There will be ample time for sightseeing, ample time for discussion, ample time for visits with friends and ample time to learn how the other fellow is getting along and for renewing associations and meeting other members of the trade from Coast to Coast. The time and place are at this great national gathering of representative lumbermen in Montreal on January 24 and 25. There you will greet and meet the men who are doing so much in a manufacturing and wholesale way to place Canada's pioneer industry on the map.

## Some Topics and The Speakers

Among the new features incorporated this year will be, as already stated, a discussion on trade prospects, production, shipments, lumber manufacture, the manner in which stocks are cut, do they meet the requirements of purchasers? etc. All these phases will be dealt with by different groups in open convention.

A. C. Manbert, of the Canadian General Lumber Co., Toronto, will lead in a discussion on white pine, in which it is expected that Ed. Letherby, of Chew Bros., Midland, and others will take part.

The spruce market and outlook will be presented in interesting talks by Angus McLean, of the Bathurst Company, Bathurst, Sir Wm. Price, of Price Bros. & Co., Quebec and Archibald Fraser, of the Fraser Companies, Limited, Edmundston, N. B.

The export situation will be dealt with by W. Gerard Power, of Quebec, past president of the C.L.A., and W. E. Golding of George McKean & Co., St. John, N.B.

The hardwood market, together with some comment on why Canada is not more widely known across the border, as a hardwood-producing country, will be dealt with by A. E. Clark, of Toronto president of the Canadian Lumbermen's Association, and J. J. Linehan, of Mowbray-Robinson & Co., Cincinnati, Ohio.

Another feature of the convention will be the discussion of insurance in all its relations on lumber products. This will be led by G. D. Finlayson, of Ottawa, superintendent of Insurance for Canada, and taken part in by W. E. Bigwood, of Toronto, past president of the C.L.A., and W. B. Snowball, of J. B. Snowball Co., Chatham, N.B.

Another departure will be the showing of several lantern slides illustrating the work, scope and progress of aircraft in the matter

The new Mount Royal Hotel, Montreal, headquarters of C.L.A. convention

of fire protection service and forest surveys. The showing of the pictures will be under the direction of J. A. Wilson, of Ottawa, secretary of the Dominion Air Board, which is seeking closer relation with the various Provincial Governments and the lumbermen of the province in the use of aircraft, the federal authorities supplying the men and the machines for the work. It is hoped that the appreciation and knowledge of what is being done in this direction will be considerably increased as a result of the pictures shown, as aviation possesses great possibilities of expansion in the lumber arena.

By the time this article is in print, the arrangements by the Montreal committees for entertaining the delegates to the convention of the Canadian Lumbermen's Association will be practically complete. This has involved a lot of work by Messrs. J. B. White and G. W. Grier, and the committee with A. Fenton as local secretary. There has been a ready response to the call for the necessary ways and means, and Mr. J. S. Bock, the chairman of the Finance Committee states that there will be sufficient to carry out the programmes of the various Committees.

A meeting of the committees was held on January 3, at the Mount Royal Hotel, presided over by Mr. J. B. White. Messrs. J. S. Bock, G. Goodfellow, J. Shearer, and C. Villiers, reported on the activities of the Finance, Entertainment, Luncheon, and Dance Committees. Messrs. G. M. Strong and Albert J. Smith have been added to the Entertainment Committee.

# What Canadian Lumbermen will Say and Do at the Montreal Gathering

Tuesday January 23rd

Meeting of Directors at Mount Royal Hotel.

Wednesday January 24th

- 10 A.M. Address of welcome by His Worship Mederic Martin, Mayor of Montreal. Presentation of President's report, secretary's report and reports of general committees.
- 1 P.M. Men's Luncheon, address by Hon. Honore Mercier, Minister of Lands and Forests, Province of Quebec.
- 2.30 P.M. Business session. Full discussion of the general situation on the subjects of: White Pine, Spruce, Hardwood and Export, led by various exporters in the different subjects. Ballots for the election of seven directors to be returned not later than 5 P.M.

Thursday January 25th

- 10 A.M. G. D. Finlayson, of Ottawa, Superintendent of Insurance for Canada will give an address on the important subject of insurance. W. E. Bigwood, of Toronto, and W. B. Snowball, of Chatham, N. B., will lead in the discussion. Address by J. A. Wilson, of Ottawa secretary of the Air Board, with moving pictures showing the value of the Air Service in forestry work.

The big idea of the gathering is that instead of having a lot of papers by various experts, time has been provided for full and thorough discussion of real live subjects by members of the Association on the floor of the convention hall. It devolves upon every individual, therefore, to come prepared to take part in the discussion of one or more subjects. This convention is to be one for the members. The newly appointed directors will be announced at the afternoon session on Thurs-

day January 25th. After the close of the convention there will be a meeting of the new directors for the purpose of electing officers for the ensuing year.

730 Thursday January 25th.—Annual Banquet. Dr. Gordon Laing, M.A., Ph.D., Dean of Faculty of Arts, McGill University and the Hon. Walter G. Mitchell, K.C.M.P., will speak to the members and friends.

## The Programme of Entertainment

The Montreal lumbermen are entertaining visitors and friends as follows:

Wednesday morning Jan. 24th.—

Reception by local ladies.

Sleighs at disposal of ladies to do their shopping, accompanied by local ladies.

Wednesday 1.00 P.M.—Luncheon at Mount Royal Hotel.

Wednesday afternoon Jan. 24th.

Theatre party at His Majesty's, George Arliss in the "Green Goddess." Meet at some place arranged later for tea. Sleighs provided to and from His Majesty's.

Thursday morning Jan. 25th.

To be left free. Sleighs in attendance for any ladies caring to use them.

Thursday Afternoon—2.30 o'clock.

Tobogganing party or drive to mountain for those not interested in tobogganing. Tea at Park Slide. Gentlemen will proceed to Slide after adjournment of meeting if they care to do so.

All those intending to take advantage of any of the foregoing events will please notify secretary Hawkins as soon as possible, so that final arrangements can be made.

Ladies and gentlemen taking in the tobogganing Party should dress warmly, wearing fur caps, woollen toques or tams and warm mittens. Don't get your feet frozen.

It was decided to print 600 tickets for the supper dance; each subscriber to the funds will be entitled to tickets for three couples, including the double ticket for himself.

The chairman emphasized the point that each subscriber was entitled to tickets for the social events of the convention, and could apply for tickets for the banquet, which, however, have to be separately paid for. A subscription to the fund did not confer the right to attend the meetings of the association; the attendance was limited to members of the Association.

It was agreed that the luncheons for the ladies and for the delegates should both be held on January 24. The Entertainment Committee will provide entertainments for those events.

Mr. E. H. Lemay was asked to invite the Hon. H. Mercier, Provincial Minister of Lands and Forests, to speak at the delegates' luncheon, and to request the Mayor of Montreal to receive the delegates on the morning of the 24th.

## Montreal Lumber Retailers are Organizing

The Montreal Retail Lumber Association is making headway. The details of organization are not yet quite complete, but they are advanced sufficiently to show that a strong body is assured. Already a considerable amount of work has been done. Three meetings have been held, the attendance showing increases at each meeting.

A meeting was held on December 27 at Freeman's Hotel, at which most of the principal retail firms were represented, Mr. J. P. Dupuis presided, and remarked that the large attendance was an indication of the necessity and growing interest in the association. One of their objects was to promote a better understanding between the retailers—to get better acquainted. It was also proposed to establish a credit bureau, in order to protect themselves in the matter of bad debts.

Messrs. Dupuis, Halliday, Thomson, Bonneau, Bordeau and Lebel were appointed a committee to report on the question of the secretaryship of the Association.

The greater part of the evening was devoted to a conference between Messrs. Frank Kent and G. K. Tyler, of the Seaman, Kent Company, Limited, and the members relative to the sales policy of the Company which has recently been modified. Messrs. Kent and Tyler explained the position of the Company and what was proposed to be done. Mr. Dupuis, on behalf of the Association, made certain proposals as to the company's policy. These were discussed at considerable length, and it was mutually agreed that the company should consider these suggestions and give an answer at the next meeting. The discussion was of the most cordial character.

Mr. Kent mentioned that additions were being made to the company's factory at St. Agathe and that a new power plant had been installed, Mr. Tyler, he added, had just been appointed manager of the Montreal branch.

Mr. Dupuis stated that it was proposed to hold meetings every fortnight, and to discuss questions of live interest at each meeting. The subject at the next session would be the relations between the wholesalers and retailers, particularly in connection with sales to certain buyers. It was also proposed to ask a representative of the Quebec Retailers' Association to address the meeting.

At the invitation of the Chairman, Mr. F. H. Devenish, secretary of the Montreal Wholesale Lumber Dealers' Association, made a brief speech. He referred to the value of a trade association in promoting a spirit of goodwill and co-operation and the benefits which resulted from the wholesalers' and retailers' associations getting together in order to discuss amicably any questions of mutual interest.

The Chairman desired Mr. Devenish to convey to his Association the best wishes of the retailers for the success of the Wholesalers' Association.

# Every Lumber Retailer is "Hiking to Windsor"

## Programme Completed for Most Representative Convention Ever Held—Full Outline of Proceedings—Hon. Pres. Reid Sends Encouraging Message

Everything has been practically completed for the fifth great annual gathering of the retailers of Ontario which will be held at the Prince Edward Hotel, Windsor, on Wednesday, Thursday and Friday, January 24th, 25th and 26th. The assembly this year will be the most representative in the history of the Association and it is expected there will be a gratifying attendance from all parts of the province. Last year the meeting was held in the Chateau Laurier, Ottawa, E. M. Barrett being the president of the Association, and there was a particularly large representation from Western Ontario. This year it is expected the men from the East will return the compliment and travel in battalions to Windsor where "Jim" Scofield, the present head of the O.R.L.D.A., says that everything will be in excellent shape for the entertainment and comfort of the retail yardmen and their wives.

There are many innovations this year that have not been characteristic of other conclaves. One is that the session will last for three days,—Wednesday, Thursday and Friday, January, 24th, 25th and 26th, which will give more time for discussion and also for pleasure. There will be ample opportunity for visiting the neighboring city of Detroit and taking in the shops, theatres and other attractions of that busy, teeming centre.

Special entertainment will be provided for the ladies who will also be present at the annual banquet and dinner-dance in the evening of Thursday January 25th. There will be no long set speeches on this occasion but Douglas Malloch, of Chicago, the lumberman poet, and Jack Miner, of Kingsville, Ont., the well-known birdman, will enliven the proceedings with their wit and wisdom.

### Some Who Will Lead Discussions

Another outstanding feature is that there will not be any set papers of a fixed, formal stereotyped character, but discussions which will be taken part in by leading retailers in various towns of the province. It is expected there will be a number of visitors from the Michigan Association. Among those who will lead in the topics will be F. B. VanDusen, of Brockville, who will talk on "trade ethics among retailers," C. L. Bowes, of Chicago who will speak on "the building plan service of the Association," S. Herath, of Ojibway, will lead the talk on "financing dwelling construction," and M. R. Bogart, of the S. Hadley Lumber Co., Chatham, will have something interesting to say on "stopping big leaks in the retail lumber business."

Robert Bennie, of the Ludlam-Ainslie Lumber Co., Leamington, will give his views on the all-important question of "apprentices in planing mills." K. J. Shirton, of Dunnville, will speak on a "shippers' rating bureau," and J. C. Scofield, of Windsor, president of the O.R.L.D.A. on an "Association trade mark."

W. M. Tupling, of Orillia, will lead off in the consideration of "standard sizes and grades for lumber," and A. R. Sanders, of Sanders & Bell, St. Thomas, will be responsible for a talk on the "relations between wholesaler, retailer and contractor." George H. Arnott, of the Windsor Lumber Co., Windsor, will tell something about "accident prevention in plants," and Clarence DeFields, who is the fire chief of Windsor, and has devoted special attention to organizing fire-fighting units in industrial establishments, will give his ideas on how this can be effectively done in planing mills and other wood-working plants.

Then besides the regular reports from the officers and committees, such as Membership Arbitration, Legislation and Transportation, Insurance and Compensation, there will be the election of officers, presentation of resolutions, and mid-summer outing for 1923, and many other items of interest which will make an agenda that will be profitable, pleasant and not unduly prolonged.

### Spend Three Days in Windsor

Every retailer of Ontario, whether a member of the Association, or not, is invited to attend the fifth annual meeting of the O.R.L.D.A. at the Prince Edward Hotel, Windsor, on Wednesday, Thursday and Friday, January 24th, 25th and 26th. He will be made welcome and will learn something about his calling, trade conditions, service, operation, management, cost-accounting, etc., that will pay him many times the small outlay he will be put to in taking the trip. Three days spent at Windsor during the fourth week of January

will be an investment that will repay in both time and money any lumber merchant in the province of Ontario.

A most interesting business show will be held in connection with the fifth annual gathering of the Ontario Retail Lumber Dealers' Association in Windsor on January 24, 25 and 26. The display booths will be on the mezzanine floor near the convention hall, and those who have taken space are the Beaver Company, Thorold; Satin Finish Hardwood Flooring Co., Toronto; Laidlaw-Belton Lumber Co., Sarnia; Seaman, Kent Co., Toronto; British Columbia Lumber Commissioner, Toronto; Creosoted Products Co., Toronto; Bird & Son, Hamilton; Laminated Materials, New Westminster, B. C., and the Plan Book Department of the Ontario Retail Lumber Dealers' Association. It is expected that other spaces will be taken before the convention dates.

### Mr. Reid Sends Stirring Message

The following cheerful and stimulating message from John B. Reid, of Toronto, Honorary President of the Ontario Retail Lumber Dealers' Association, to the members from all over the province who will assemble in annual convention at the Prince Edward Hotel, Windsor, on Wednesday, Thursday and Friday, January 24, 25 and 26, will be read with timely interest. Mr. Reid is spending several months at his winter home in St. Petersburg, Florida.

#### Motto For 1923

"Workers Don't Kick,  
Kickers Don't Work"

To the officers and members of the Ontario Retail Lumber Dealers' Association,—I wish to extend to you a happy and prosperous New Year, and also an urgent call to your convention at Windsor on Wednesday, Thursday and Friday, January 24, 25 and 26.

You will agree with me that your officers and committees have done wonderful work in the last year and deserve all the backing and upholding of their hands that you can give them—You are all aware that the good to be done by our Association can only be accomplished by the whole-hearted co-operation of each and every member. You have the best of officers and they have all worked hard for all our welfare.

Don't let a trifle keep you from getting to Windsor on the day appointed—and when there—wake up and have something to say and do something to keep the flag flying high for the O.R.D.L.A. Every member can do something—so don't be afraid to speak up.

There are lots of good things in store for us. Don't forget for one moment that our business is one of the most dignified and useful and that the part we play in the uplift and welfare of the community in which we live and do business, is second to none.

In building up the nation as a whole—it is my own experience of some forty odd years, that I have found no body of men, more honorable, or more intelligent than those among the retail lumbermen. I am glad to know that in the last few years the rest of our members have come to the same conclusion.

Now my position as Honorary President among your officers does not permit of me taking the active interest that I had been able to do heretofore, but at that, away down here in Florida, at land's end, with all the good time I am having, I don't forget what we have worked up to and the necessity of still working hard, to keep the high position we have reached in the lumber world. We have had the honor of starting things in the right direction. Let us all work hard to keep them there and always go one better.

I will never forget the address made by a prominent

dealer at Windsor, at the first banquet given by the Western Section, where he stated that by co-operation he was able to spend his winters in Florida, without the slightest thought of trouble while he was away, owing to the good that he and the rest of the dealers had derived from their Association.

I find there is no co-operation among the dealers down

John B. Reid, Toronto,  
Hon. President of O.R.L.D.A.

here in St. Petersburg, Florida. They are about in the same position we in Ontario were five or six years ago, kicking about price-cutting and bad debts. I dare not say anything about association work or credit bureau to any of the dealers here as I don't want any organizer's job. It would in-

terfere with my pleasure which I would not have happen for worlds.

I expect several of our members to get here after the New Year, and year after year there will be more following my advice not to wait until they have to come from over-work, but get here while they have their health and strength to enjoy some of their wealth, that they have stored up, as we all worked hard enough for.

So all get the habit and become busy and enjoy some of life before it is too late. There is always a welcome for good fellows down here and I know they are the only kind in our Association.

In business dealing, when you have been unfairly treated, overcharged, lied to, or met with discourtesy, don't turn your cheek to be slapped, turn your back and depart. This is a back smile that is justified and has a telling effect.

Good business men find it ever profitable to sell honest goods, wrapped up in courtesy and bound with friendship. The price-cutter purchases a line of lumber inferior in quality and low in price, which he attempts to palm off on the customer as first quality stock. He usually charges as much for his junk as a dependable merchant does for the real stuff. If his customer objects to the quality or price, he treats him with discourtesy, falsehood and arrogance. The best thing to do is to pass him up.

The party, who aims to take a dishonest advantage of a customer, is a business bully. His victims are generally of a class, who trust to his knowledge of the stock and they accept his word. To cheat people, who trust you, is the mark of a degenerate mind. The man, who conducts his business on an honorable basis, respects the confidence placed in him by his customers, counts every customer as a friend and treats them in such a manner that they return to his yard. This is burning incense on the shrine of success.

As a last request, I would ask all our members to get to the convention at Windsor on Wednesday, Thursday and Friday, January 24, 25 and 26, work hard for the welfare of the O.R.L.D.A. and have a jolly good time. May the best of luck follow you all through the year 1923, is the sincere wish of your

Honorary President,  
J. B. Reid.

St. Petersburg, Florida,  
January 4, 1923

## The Agenda for the Windsor Convention

### Wednesday, January 24

- |           |                  |   |
|-----------|------------------|---|
| Morning   | 10.00 A.M. Sharp | Registration.<br>Meeting of Directors, Parlor "D"               |
| Afternoon | 2.00 P.M. Sharp  | Opening Session.  |
|           | 1.               | Prayer by Rev. Robt. Bennie, of Leamington, Ont.                |
|           | 2.               | Minutes of Previous Meeting.                                    |
|           | 3.               | Address of Welcome by H. W. Wilson, Mayor of Windsor.           |
| 2 to 3    | 4.               | President's Remarks.  |

The President says, "Welcome to Windsor. It will be the greatest gathering ever. Come and see. Bring along the ladies."

Bird's eye view of the log storing facilities, modern plant and extensive yards of The Pas Lumber Co., The Pas, Man.

## Lumber Activities in Northern Manitoba

Manitoba is Usually Synonymous with Stories of Countless Acres of Golden Grain, but Away up in the Northern Part of the Province The Pas Lumber Company, Limited, at The Pas. Sends News and Illustrations Pointing Out that Manitoba has also Valuable Forests Besides Prairies

While the province of Manitoba is regarded as a wheat-growing province, it is fast becoming noted for its lumber activities, especially in the northern areas. A firm, that have done much to develop the industry in these parts are The Pas Lumber Co., Limited, who are operating at the present time on a large scale. Visitors to the plant express surprise at the magnitude of the undertakings witnessed on every side.

One of the best paying portions of the Canadian National railway system is that running between the Hudson Bay Junction and The Pas, due principally to the activities of The Pas Lumber Co., Limited, who are constantly shipping carloads of lumber to the more civilized world; in fact it is often found necessary to charter special trains to take out lumber. The company have a shipping capacity of from twelve to fifteen cars per day, and have earned quite a reputation for themselves on account of their prompt filling of orders.

The principals of the concern are the same as are interested in the Prince Albert Lumber Co., Prince Albert, Sask.; and the Ladder Lake Lumber Co., Big River, Sask.; viz:—

Secretary and Manager, A. L. Mattes, Winnipeg, Man.; President, D. N. Winton, Minneapolis, Minn.; Vice-President, C. J. Winton, Minneapolis, Minn.; Treasurer, Alvin Robertson, Minneapolis, Minn.

The main office of the company is at The Pas, Man., but the sales office, which is in charge of B. F. Harris, is located at 601 Electric Railway Chambers, Winnipeg, Man.

The Pas Lumber Company, Ltd., took over the plant of the Finger Lumber Company in 1919, and immediately commenced to rebuild, enlarge, and modernize, as a consequence possesses one of the most up-to-date plants in Canada. The employees of the company are extremely well housed and cared for. A large boarding house, situated near the mill, will accommodate 120 men, and each room contains two single beds. Recreation halls are provided and the building is equipped with steam heat, electric light, shower baths, and other modern conveniences. In addition to the boarding house for single men, the company have a large number of houses for married employees. Men employed in bush work are also extremely well looked after, and every camp is equipped with steel bunks, and mattresses. The mill is situated on the banks of the Saskatchewan River, on the outskirts of the town, while the company's timber limits are located North and West of the The Pas, on the Carrot and Saskatchewan Rivers.

### Large Capacity of the Mill

The mill has a capacity of 50,000,000 feet of lumber, and 15,000,000 pieces of lath per year. It is operated about seven months in each year, sawing commencing the first part of April, and continuing until the beginning of November, when the mill is shut down for the winter, but shipping and planing continues throughout the year.

During the summer months about five hundred men are employed, while about twelve or fifteen hundred are engaged in the winter for bush work. Most of this labor comes from the prairie

provinces, the influx to the woods commencing almost immediately harvesting operations are completed. Some skilled lumbermen, however, work at the mills during the summer months and assist in shipping and also logging operations in the winter. During the winter The Pas Lumber Company, Ltd., use 500 horses in the woods, most of these being hired from big railway contractors, farmers, etc.

The saw mill equipment consists of two single cutting band saws, and a large gang. The planing mill is equipped with modern fast feed planing machines, and the quality of the work turned out is exceptional. The company prides itself on the planing machine work and the uniform grading of its lumber. The company has several large steamboats for towing logs down the Saskatchewan and Carrot rivers to the mills, among these are S.S. David N. Winton, and the S.S. Alice Mattes, besides several gasoline launches, and smaller craft. The company's towing boat makes two and three trips a day from the rafting works to the mill during the summer season, taking a raft of some 3,000 logs, equivalent to 150,000 to 175,000 log-feet on each trip, a distance of about three miles.

### Provisioning of the Camp

To feed from twelve to fifteen hundred men in outlying camps during a long northern winter is no easy matter, and The Pas Lumber Company's boats are kept busy during the summer, shipping supplies from the town, to the general distributing warehouses on the Saskatchewan and Carrot rivers. Carload upon carload of beef, pork, flour, potatoes, and other commodities find their way into The Pas, and are sent out to the warehouses. The company maintain a store where clothing, suitable for the bush is sold to the lumberjacks at a cheap rate, and it is not the fault of the organization if a man goes into the bush not properly clothed for the strenuous

Logging scene in The Pas Lumber Co., operations in Northern Manitoba

northern winter. Then there is the feeding of 500 horses, which necessitates the shipment of thousands of tons of hay, and large quantities of oats into the camp. Unfortunately the camp is situated at some distance removed from railway transportation, and all supplies have to be taken into the camps by boat during the summer.

#### Abundant Supply of Timber

Every precaution is being taken by the authorities to protect the standing timber of the north. In addition to good sized timber, there are vast sized tracts of timber suitable for pulp wood in various parts of Northern Manitoba and Saskatchewan, and while in the past fires have caused considerable destruction, every year sees more efficient methods for fire control. A force of forest rangers is kept at work patrolling the country during the summer months, and keeping a watchful eye on inexperienced travellers who, through carelessness, might start a fire that would run into millions of dollars worth of damage. These rangers continue their patrol work until the freeze up.

During the past summer the fire ranging force in Northern Manitoba was augmented by large hydro planes, which made regular trips through the outlying districts. These planes were fitted with fire fighting apparatus, an auxiliary engine, hose, etc., and, in the event of a fire being reported, ten men could be carried to the scene of the blaze in one trip. Since the authorities seriously took in hand the matter of fire control, Northern Manitoba has been singularly free from fires of any size, and it is hoped that this work will be continued. Timber is already becoming a scarce commodity in the United States, and it will not be long before the whole continent will have to look to Northern Manitoba to supply a great part of lumber and pulpwood.

#### Quebec Forestry Engineers on Timber Depletion

The Quebec Society of Engineers is becoming an important adjunct to the Department of Lands and Forests, to guide and keep posted the Quebec Government on its administration of the forest resources of the province. The Society of Quebec Engineers was organized over two years ago by the students in forestry and engineers, encouraged and aided by the Government. After graduation from the Forestry School of Engineers at Laval University, they are sent to Europe at the Quebec Government's expense to study and learn methods of forestry as it is practised in France and Scandinavian countries.

The Quebec Society of Forestry Engineers now embraces a membership of ninety, and towards the latter part of last December held their second annual convention in Quebec. The meeting was held in camera because there were many questions of importance to discuss, besides the adoption of a constitution, by-laws, etc., and reports from engineering inspection of forest areas, both by air and land surveys, which had to be reported to the Department of Lands and Forests before being made public. The convention lasted two days and was attended by over two-thirds of the membership, including engineers from private lumber firms and limit holders who came from all parts of the province.

The most important question discussed was the continued diminishment of the forest resources and the best means of combating the annual destruction of forests in the province of Quebec. After several propositions had been submitted which will be further studied, as well as being sent to the Forestry Branch of the Department of Lands and Forests for study, the following resolution was adopted by the convention for publication:—

"It is resolved that the Society of Forestry Engineers, warn the citizens of the province of Quebec, that our forest resources are continually diminishing and that they are exposed to extinction through the ravages of fire, insects, fungus and dead-wood.

"It is the opinion of the Quebec Forestry Engineers' Society that it would be opportune to assure the conservation of our forests by the immediate creation of a permanent forestry reserve with the object of safeguarding in perpetuity our forests and the industries depending upon them."

The question of conservation was also thoroughly gone into and a resolution was adopted, to be sent to the Government for study and organization action.

The frequency of fires during the summer season which destroyed vast and valuable areas was discussed. Mr. Piche related what had been done by the Lands and Forests Department during the past two years, the precautions and the result. There were numerous fires and much destruction due to careless hunters and settlers, as well as wood operators. The information of Mr. Piche provoked a discussion and the engineers at the meeting were unanimous in recommending the government to take drastic action against the offenders. The devastation done to the forest resources

by the insect plagues, fungus and dead-wood, also brought out a lengthy discussion, and it was resolved that a most thorough study should be made to combat this source of devastation which is causing even more havoc than the forest fires.

At the conclusion of the business of the convention, the following were elected officers for the year 1923:—President, Omer Lusier, in charge of technical work, Forestry Service, Province of Quebec; Vice-President, S. L. de Carteret, Forestry Engineer in Chief for the Brown Corporation; Secretary-Treasurer, Victor Baillarge, member of Quebec Government Forestry Service; Councillors:—G. C. Piche, Ellwood Wilson, George Maheux, Henry Sorgius and E. Guerin.

#### Pashas Without and Within

If Mustaph Kemal Pasha stole a shipload of lumber from one of John Bull's merchants, the whole British Empire would be on tip toe to see who gave Kemal his first trouncing.

We like to see our national friends and enemies draped becomingly in flags and bunting. We seem to recognize antagonists only when they have been passed upon by a Cabinet Council. Then commences the flood of telegrams: "Every man and every last dollar;" "Count on the whole battalion;" and much more of a like and worthy sort.

Meanwhile, a hundred Kemal Pashas work vast mischief to the economic life of this Dominion. They wear no uniforms, they trouble no Foreign Office. They raise no alien flags. The pillage they do pays perpetual dividends of misery. But because these evil forces are not rigged out in the uniforms of foreign tyrants, we fill up our days with turning furrows and laying bricks and thank the Lord that Canada has nothing to worry over.

Well, Canada as regards her forest problems can free her mind from worry only by shutting off her intelligence. The heaviest drag on the progress of Canada has not been a National Debt but a neglect of the natural resources. The needless sacrifice of white pine by fire in Ontario and Quebec alone would unquestionably have matched the present provincial debts. The squandering of timber through unobstructed fires in the prairie provinces has doubtless been equal to the bond issues of the three administrations. Month after month the reckoning of forest fire losses would astound and stir to action any board of directors of a private company, but leaves untouched that peculiar company of citizens in charge of forest assets valued at several billions of dollars. Why is it so?

The Canadian citizen is no dullard. He is accustomed to act promptly on what is put up to him as a "public issue." But we are not a nation of political or economic students. We wait for the newspapers to tell us what the "issues" are. Sometimes we pick up a hint from our politicians. That is why the American continent is so readily swayed by propaganda. An issue not backed by organized propaganda is elbowed out of the main road by issues that are. This may explain why the great basic policies—the sane conserving and developing of the great natural resources, for example—have had to give away in legislative halls to less important but more emotional issues of social reform, road construction and the import tax on mouse traps. Inaction by our governments on the really vital matters is a precise barometer of public opinion. Until public opinion on forest preservation takes on the glow of an evangelistic cause, we will continue to take our seats about the arena of blazing forests with the same unconcern that we apply to 34 cents worth of Rodolph Valentino.

The Canadian citizen owns eighty-five per cent. of the forest area. And he does not know it. The Canadian citizen being the forest owner is the responsible forest conservator. He does not know it. The Canadian citizen is a personal trustee for his grandchild's forest inheritance. He does not know it. The Canadian citizen as forest owner, holds in his hands the responsibility for the greatest industrial expansion that lies in the path of this nation. But he is unaware of it.

The moment the simple convincing facts of his partnership in the profits and penalties of forest management are put in possession of the Canadian citizen, the jubilee of forestry will be at hand.—Robson Black.

# Stratford District Retailers Hold Annual

*New Officers Elected for Coming Season and Encouraging Trade Reports Received—Trend of Lumber Prices Upward—Credit Bureau Will be Formed*

E. K. Kalbfleisch, Stratford, Ont.  
Newly-elected chairman

With an attendance representing over two-thirds of the total membership, the Stratford District retailers of the O.R.L.D.A. gathered together on January 8th at the Mansion House, in the Classic City, and spent several profitable hours discussing many timely subjects of direct interest to the retail lumber dealer.

J. J. Cluff, of Seaforth, presided and opened the meeting with a short address to the retailers pointing out the many benefits to be derived from the interchange of views such as a gathering of this kind offered. The many troubles that loomed up so large in a man's business and which, he thought, were only troubles of his own, were found to be the identical problems that the other man sitting next to him at the convention table was confronted with. These exchanges of grievances, said the

chairman, were helpful and often profitable. "When we start back to work we go at it a good deal more determinedly because we know we are not alone in our endeavors," he added.

The chairman concluded his address by saying that everyone could learn something more about the product they were selling every day, and, in these times of change and progress, association work was needed more and more for the retailers to make a concerted effort towards giving better service to the public and so establishing the building supply business as a part of the community.

Mr. Cluff regretted to announce that J. C. Scofield, president of the O.R.L.D.A., who was to have been present to address the members, was unavoidably detained on account of sickness in his family. He then called upon H. Boulton, secretary of the O.R.L.D.A., to address the meeting.

## Lumber Retailers Must Broaden Out

Mr. Boulton responded with a comprehensive talk on a number of progressive subjects, among which was the new plan service the Association had undertaken to supply the retailers of Ontario. He pointed out how the retail lumber business to-day was compelled, in

view of the many sources of competition, to supply more than the mere boards and scantling; the very fact that the directors of their Association had deemed it advisable to inaugurate the service in Ontario, it was up to the dealers to take advantage of it. Over fifty members, he stated, had already ordered the service, including several members present.

Mr. Boulton then took up the question of credit bureaus, and explained how successfully they were operated by other merchant Associations. He recited in a convincing manner a few examples of how a list of delinquent debtors would save many dollars for the retail lumber merchant.

In referring to the fourth annual convention of the O.R.L.D.A. to be held at the Prince Edward Hotel, Windsor, Ont., on January 24th, 25th and 26th, the secretary drew the attention of the members to be sure and ask for a standard convention certificate when buying their one way ticket to Windsor. A reduced rate, of a fare and a half, is given by the railroads to convention bodies who can guarantee at least one hundred and fifty purchasers of tickets.

## Cost of Building is Going Up

From their experiences at conventions across the line, particularly the National Retail Lumber Dealers' Association convention held at Cleveland, the secretary stated that Mr. Scofield and he had learned much about making the forthcoming gathering at Windsor a particularly live one. They had a programme completed which would eliminate monotonous speeches, and open discussions and short talks by those who wish to give their views would be substituted. Eight or ten interesting subjects had been selected which will be discussed for a certainty, with live retailers leading the discussions. The first day will be devoted to renewing acquaintances and disposing of the business reports. The second day will be given to open discussion of various subjects and the third to the draughting of resolutions coming up. Mr. Boulton urged the members to bring their lady friends as a programme had been prepared for the entertainment of their wives, daughters and sweethearts.

Following Mr. Boulton's talk, which was appreciated, a discussion on the demand of lumber in 1923 was led by J. J. Cluff, of Seaforth. Everybody present took part and it was the general opinion that the cost of all kinds of building in 1923 was bound to be higher in price, but it was also thought that the increased cost of materials would not retard construction, as Canada had reached a period when building and repair work could not be postponed without visible actual loss. A number of retailers reported a decided shortage in hemlock and many declared that it was bound to go up in price as a result.

Another subject which drew forth much comment was the case

Geo. S. Zimmerman, Tavistock,  
Newly-elected Secy-Treasurer

D. C. Baird, St. Mary's,  
Newly-elected Vice-Chairman

E. Fleischauer, Stratford,  
Retiring Secy-Treasurer

of the wooden shingle vs. ready roofing. George S. Zimmerman, of Tavistock, said that the new stained shingle would prove a boon to the sale of the wooden shingle, adding variety and helping to beautify the home. The majority of members present claimed that the wooden shingle could not be beaten and any fault that was found with them was due in the main to the nails used. The subject of nailing was then discussed and disclosed many faults of different kinds of nails. Many agreed, however, that the galvanized iron nail recommended by the B.C. lumber commissioner, 51 Yonge St., Toronto, was the best one for use on the red cedar shingle.

#### District Forms Local Credit Bureau

The question of forming a local credit bureau was emphasized by Mr. Cluff, the chairman. He admitted that the subject had been before the members in 1922 and that they had not done anything toward compiling the necessary lists.

Robert Oliver, of Listowel, Ont., asked what kind of delinquent debtors were considered dangerous?

George S. Zimmerman, of Tavistock, replied, that in his opinion, no matter how good judgment a man thought he possessed of human nature, he was bound to be taken in at intervals, for sometimes large amounts, by men who, after running up an account in one town, would go to another centre and buy building material on credit from another merchant. Of course, both would lose, whereas with the advantages of a credit bureau, the experience of one should help the other, and vice versa.

Mr. Cluff was much in favor of a local bureau of this kind and a vote was taken which showed that the rest of the members also endorsed such a plan. Accordingly each member will send a list of his "bad ones" to his local secretary, who will in turn put them in shape and send them on to Secretary Boulton for distribution to the members of the branch. The members are expected to compile their lists within a month's time.

#### Association Plan Service Explained

G. T. Meinzer, service manager in charge of the sales of the O.R.L.D.A. plan service, was asked by the chairman to explain the service to the members. He first distributed among the retailers illustrations of houses, barns and other buildings in attractive folder form. He also had books of illustrated homes and other buildings

which were indexed, and by referring to a large book composing the estimating, the cost of any building was quickly determined. Blue-prints are supplied at \$2.50 a drawing. The cost of the illustrated books and material cost book is \$45.00 a year. There are, of course, the necessary colored billboards, metal signs, illustrated folders and letterheads with bright illustrations of homes arranged at the top and sides, all of which are essential in attracting the attention of a prospective builder to do business with a lumber merchant. The cost of the complete service would run about \$175.00 to \$200.00 a year according to the advertising requirements, etc.

Frank L. Reed, of the Union Lumber Co., Toronto, who was present in Stratford on a business trip, was invited by the chairman to say a few words. Mr. Reed thought there was no doubt that the price of better-grade softwoods would advance in the near future, and added that he knew of one manufacturer at least, who was selling his cut for 20% higher than last year.

#### New Officers for Coming Year

The election of officers for 1923 was held. Mr. Cluff was asked to take the chair again in 1923, but declined, saying that while he did not mind the work attached to the job, he thought it was only right that some other member should take a hand in directing the affairs.

E. K. Kalbfleisch, of Stratford, who was vice-chairman for 1922, was elected chairman for 1923, and D. C. Baird, of St. Mary's, was elected vice-chairman.

E. Fleischauer, of Stratford, who was secretary in the past year, was nominated for the office again, but declined owing to press of business. George S. Zimmerman, of Tavistock, was then chosen to fill the secretary-treasurership. D. Floody, Blyth, Ont.; Robert Oliver, Listowel; Thomas A. Pounder, Stratford; E. Fleischauer, Stratford, and J. J. Cluff, Seaforth, were the men voted to the executive.

Among those present were:—J. J. Cluff, Seaforth; D. C. Baird, St. Mary's; George S. Zimmerman, Tavistock; Robert Oliver, Listowel; E. K. Kalbfleisch, Stratford; E. Fleischauer, Stratford; H. Schlemmer, Tavistock; F. Floody, Blyth; J. Boshart, Milverton; F. A. Ronnenberg, Monkton; Thomas Pounder, Stratford; H. Boulton, secretary O.R.L.D.A.; G. T. Meinzer, Plan Service Manager, and A. W. Lynn, of the "Canada Lumberman."

## The Principal Elements in Good Houses and Character of Their Construction

Most people buy houses in the manner of the man who ordered a blue automobile. They purchase almost wholly on outward appearances, so far as the physical condition of the property is concerned. Paint, varnish and newness sell many houses. Very few purchasers concern themselves with the invisible construction of a house or with external evidences of the nature of the internal work. Yet what is not seen largely determines the future value of the property, the cost of upkeep and the satisfaction of the owner. The passing years inevitably reveal the true nature of the construction.

Yet it is not difficult for a house-buyer to find out whether the house is of proper and suitable materials and correct methods of construction, says the technical department of the National Lumber Manufacturers' Association in answer to inquiries. The best way, of course, is to have the house inspected by some competent person, but there are certain fundamentals which anyone may apply for himself with the probability of being guided to a correct determination of the intrinsic value of a house. Nobody wants to buy a house that will soon develop cracked plaster, sagging doors, jamming windows, floors that spring and creak, unsightly open joints in woodwork and spaces between casings, baseboard and floors; leaky roofs, unsightly sagging porches, and leaky or spilling gutters, swayback gables, etc.

To insure against these annoying developments the foundation first should be carefully examined, for any settling or cracking there is certain to be reflected in the superstructure no matter how good. The footing of the foundation should be wider than the foundation itself and should be placed below the frost line. If the foundation is not a single unit, such as poured concrete, it should be carefully inspected to insure that it is of good materials well put together.

About half the weight of a building is carried on the posts, which should rest on piers. The posts support a girder on which the inner

ends of floor joists rest, as well as the partitions which carry the upper floors of the house. The piers should be higher than the basement floor in order to prevent rot if the basement should be damp. Often the concrete of the floor is run up around the bases of the posts thus sealing up the end and creating a favorable condition for dry-rot. In either case the post will eventually settle with unpleasant results. The piers should be carefully made, flat on the bottom and of adequate bearing surface on the soil underneath.

Most houses are safe enough so far as the floor supports are concerned, but the floor should be rigid and stiff to prevent cracking plaster, sagging or spring and creaking floors. Joists are commonly strong enough for this purpose, so the stiffness is the main factor to be considered. The determination of this will probably require some expert advice, though walking or stamping on the floor will often reveal a weakness. The joists should have uniform bearings where they enter masonry walls, otherwise uneven settling will follow with humpy floors and loosened nails. Where joists are not of a single timber the two pieces making them up should be well and strongly spiked together.

Joists should be anchored to masonry walls about every fourth or fifth joist with T-shaped metal straps nailed to the side of the joist near the bottom, with the top of the T built into the wall. This ties the building together. Placing the metal strap near the bottom of the joist is a precaution in case of fire, so that a burned through joist will fall against the wall instead of pulling the wall down with it. When joists enter stud walls and are supported by a ribbon, that is, a board notched in the edges of the stud, they should be well spiked to the studs also. A feature of floor construction that is hidden in upper floors but is usually in evidence underneath the ground floor is the cross-bridging or diagonal bracing between the joists. This bracing keeps the joists in alignment. If a joist is not thus supported by its fellows it may tilt or bend, and cause cracked plaster below and a sagging and squeaking floor above. If floors do

not sag spaces will not be opened up between baseboards, casings and floors.

Floor joists are often weakened through cutting or boring holes in them to make room for plumbing or some other mechanical equipment. Such cuts should not be deeper than one-fifth the depth of the joist below the top, and the center of a hole should not be more than the same distance from the top. These openings should be near the end of the beam and never further from the end than three times its depth.

#### Cut-offs and Holes in Joists

Where joists are cut off to make openings for stairways, etc., the joists along the side of the openings should be doubled and the loose ends of the cut joists spiked to a "header" which runs across the opening to the two double joists. The headers should be of the same depth as the joists and of at least double thickness. Headers that are more than eight feet long should be supported at their ends by metal stirrups from the trimmer or doubled joists.

On account of the arrangement of rooms above it is often necessary to have the joists support what are called bearing partitions, which support part of the weight of the upper floors and other construction above them, as well as acting as room walls. Such partitions, if possible, should always be in the same vertical plane with like partitions above or below. The lowest one should always be directly over the girder in the basement. If partitions must rest on joists, the one immediately below such a partition should be doubled, if the partition is parallel. In case such a partition is to enclose pipes the double joists are placed two or three inches apart and connected with well nailed blocking except where the pipe is to pass.

When bearing partitions run across the joists, which is not often, solid bridging of the same size as the joists should unite them directly beneath, and the joists should be larger, doubled or placed closer together. In this connection it should be noted that it is better to increase the depths of the joists rather than to double them.

All bearing partitions that support partitions above should have double plates across the top of the studs and also at the bottom unless the studs run down between the joists and rest on the top plate of a bearing partition below. They should have horizontal braces or bridging placed between the studs midway between the floor and ceiling. If more than the weight of the two floors is carried by such a stud partition the members of the partition should be increased in size.

#### Equalizing Shrinkage of Wood

The shrinkage of wood can not be entirely eliminated, but it can be equalized so that little harm will result. It shrinks more across the grain than with it, so the amount of lumber with the grain horizontal should be as nearly equal as possible in different parts of the building. A better way to put it would be to say that the horizontal grain pieces in a cross-section of the outside walls and of the bearing partitions should be the same—so that their shrinkage will be equal, thus maintaining their original relations.

Though a good foundation is fundamental it can be negated by a poor frame, especially in the portions that support weight or resist the pressure of wind. Plenty of windows are needed, but each window necessitates a hole in the wall that weakens it unless compensated for. This is done by proper framing of the openings. Their side studs should be doubled and a double piece should be placed across the top and bottom of the opening. If the opening is more than three feet wide it should be trussed across the top. The carpenter knows how to do it, and will do it if you insist. Narrow openings can be taken care of by headers, similar to those mentioned above. If these openings as well as those for interior doors are not substantially framed, binding or warped window and door frames will result, necessitating replastering and redecorating in correcting. If a wall with a poorly framed opening supports joists the floors will sag.

#### Watch the Roof Always

It is sometimes said that the main purpose of a building is to support a roof. Anyway, a house without a roof is not much, and one with a poor roof is little better. It is highly important that the pitch or slope be ample for drainage. If the gutters are placed too high on a roof without sufficient pitch they will become clogged up with snow and ice in the winter and water will back up under the roof covering, rotting the roof boards and ruining the ceilings.

It is exceedingly important that the rafters be strong enough to make a good job of holding up the roof. The writer recently examined a house for a prospective buyer that was so deficient in this respect as to be pathetic and perhaps tragic. It is typical of jerry-built houses everywhere, whose sad appearance after a few years is charged to frame construction, instead of to careless if not fraudulent work. The east has many eighteenth century frame houses that are standing up better today than some of the stone and brick houses

erected at the same time, whereas new suburbs are spotted with houses that are ramshackle after a decade or less. In this particular house the individual rafters were not stiff enough and were sway-backed and sagging and there were not enough of them, that is, they were too far apart. In the ordinary frame house rafters should be not more than twenty inches apart. It is generally best practice to space L rafters the same as the studding and joists so each rafter end will have a solid support. Instead of resting on the outside walls, as they should, the rafters were supported by thin boards laid across the tops of the ceiling joists, and only about one rafter in four rested on anything solid underneath, the rest of them being spaced between joists. The roof covering was of slate and was heavy enough to bend the thin boards with the result that the eaves were as wavy as the edge of a bread knife, the ridge humped and the slate cracked and fell off. And this house had been completed within a month! It was brand new but already falling down.

#### Pioneer Lumberjack Has Cut Out Smoking

Perhaps the most ruggedly interesting of pioneer figures in Eastern Ontario is Duncan MacDonnell, of Pembroke, Ont., who celebrated his ninety-sixth birthday to-day in a manner befitting a Hielan' man who is nearly a hundred years young. He belongs to the MacDonnells, of Glencoe clan fame, and his mother, Janet Forbes, lived to her one hundred and fifth year. Mr. MacDonnell still cuts the wood for his son's family and does the other odd jobs around the house. His eye is still bright and alert, and the ankylosis that has attacked his limbs has not reached his brain. He does not read, so he had not learned that the whiskey of which he had drunk so much when in the shanties—in preference to melted snow—was bad for him.

Now, since it has been cut out for him, he is sure it must have been bad. Smoking he cut out two years ago, as it was stunting his growth, he said. As a shantyman in the wild "good old days" his fare had been frozen bread and pork, washed down with the melted snow—failing whiskey! He was the first man to stamp on a stick of timber the initials of A. & P. White, the pioneer lumbermen of the Ottawa valley clear through to North Bay.

W. R. White, of Pembroke, whose father cut the first stick of timber in or near Pembroke, and was its first settler, tells the following story of Mr. MacDonnell: "I was standing near Duncan one day when he was squaring a stick of red pine 60 feet long. He had felled it across a beech sapling which interfered with the play of his broadaxe. He cut the frosty sapling in two with one stroke, and it rebounded, hitting him in the forehead. It lifted his forehead from his eyebrows to his hair, literally scalping him!

"Getting dizzily to his feet, he deliberately mixed some chewing tobacco with snow and applied it to the raw wound, after having pressed it into place with his own hands. Then he bound it up with a handkerchief he had used for at least a month and resumed his work. That night, by the aid of a cracked mirror, he sewed the split in his scalp together with three enormous heavy linen stitches. Next day he went to work again.

"To-day," continued Mr. White, "a man would be in the hospital at least a month with an injury like that. Duncan never tells that story. In all the wonderful stories that roll from his lips, it is always the other fellow who does the daring things."

#### Judgment Delivered in Lumber Action

Judgment has been delivered by Justice Middleton, of Toronto, in the action and counter-action arising out of a contract for the purchase of lumber entered into by M. Martin, of Huntsville, Ont., as plaintiff, and Frank Austin, of Haliburton, as defendant.

The action was originally tried before the late Justice Sutherland, but was not disposed of by him before his death. It was then re-argued on evidence transcribed, with the result that the defendant is to receive \$39,474.32. As he has been paid \$40,000, the judgment orders a refund of \$523.58.

#### Montreal Wholesalers Hear About Co-operation

At the luncheon of the Montreal Wholesale Lumber Dealers' Association on January 3rd, Mr. J. S. Bock, the chairman, in wishing all the members a prosperous 1923, emphasized the value of co-operation, of mutual trust. He was certain, he said, that the exercise of the co-operative spirit would be of great advantage to every wholesaler. They should cultivate more fully the practice of inter-trading, so that each wholesaler would be benefited. The present year should be one of co-operative effort in furthering the interests of the trade and of extending their business. The next general meeting of the Association will be held on the 18th inst.

### The Horoscope in Lumber Line

The year 1922 was one in which considerable progress was made in general conditions of the lumber trade. January opened with some misgivings but it was not many weeks before an active campaign in house and store construction started. The impetus was felt in all the larger centres of population and kept up encouragingly until the end of December, the mild weather being favorable to construction. The result was that softwoods had a steady persistent call which caused values to become more stable and the retailers to reduce their stocks appreciably. So great was the demand for small dimension, joists, studding, etc., that hemlock, spruce, jack pine, B. C. fir and southern pine were all purchased in large quantities and toward the end of the season a scarcity developed in certain widths and thicknesses. Dry stock in mill yards, as soon as it was ready for shipment, was moved out and saw mills ran considerably later than the previous year. The result of the large turnover in softwoods is that stock's in the yards of manufacturers today are from 25 to 50% lower than they were a year ago at this time and different sizes are badly broken, particularly in the higher grades.

Prices have been much firmer during the past few months than they were at the beginning of 1922 and they show no signs of recession. On the other hand it is predicted that values may rise considerably until the new stocks come on the market.

More inquiries are being made today for the cuts of mills and the probable output than at any time since the unpredicted boom of 1920. The cut in the bush this winter will be unusually heavy. There was a shortage of labor at the beginning of the season but all the camps are now pretty well manned. It is reported that, owing to increased logging operations there are between 900 and 1,000 camps running in Ontario at the present time.

There is a feeling of confidence in the lumber trade that 1923 will be a year of steady values, growing volume and stable demand. Equalization of production and consumption will be more marked, and apparently the building spurt, which took place in all the larger communities, will continue unabated.

So far as hardwoods are concerned, these were quite dull for the first few months in the year, the only call being from automobile plants, with a few straggling orders from furniture producers. Local industrial establishments were running on a much reduced scale and had an abundance of stock on hand. The principal market was over the border, and it is believed that about 80% of the stock sold found its way into the United States. Canadian plants, however, have begun to find business steadily reviving during the last few weeks. There are now more inquiries for stock, the wide spread in prices has disappeared and things generally have taken on a brighter aspect. During the closing months of 1922 considerable difficulty was experienced in making shipments owing to shortage of cars

and embargoes at various points but the transportation situation improved with the beginning of 1923.

A larger cut in hardwoods is taking place than there was anticipated. There is much reconnoitering for stocks and those, who have quantities of native woods on hand, are not inclined to part with them, unless they can secure the figure sought.

1922 was a very good year in the lumber industry, so far as Ontario was concerned. High-priced stocks were cleared out and operations got down to a replacement value. It was a period of recovery and readjustment, and while not a money-making era with many wholesalers or producers, still a firm foundation was laid for rearing a good super-structure during 1923.

### January is the Convention Month

Are you too big or too small for your business? This query may arouse more than passing interest and aptly describes a few men who are found in every calling or trade. We refer particularly to those who are either so great, successful and all-important that they do not need to attend a trade convention, or the ones who are so suspicious, narrow-gauged and selfish that they cannot spare a few hours or a few dollars to mingle with their brethren.

In every town and city there is always the fellow who thinks he is very much above the average in his class or calling. Then there is the other chap who imagines that if men of the same vocation come together, these "conventioners" are neglecting their own business or assemble merely for some sordid or selfish purpose. The fellow, who stays away and thinks he knows all about running his own affairs and is not going to be dictated to by anybody, and remarks that he possesses a hang-sight more knowledge about lumber and conducting a planing mill or taking care of stock than Bill Smith who lives over in the next town, is, however, finding his ranks growing thinner. He is being out-classed and out-distanced, and like a man who is slowly freezing to death in a zero temperature, is not aware of his awful fate.

January is generally a quiet period in the lumber trade. The retailer, wholesaler or millman has just completed his work for the year, taken his inventory and is looking out over the twelve months that are to come. He cannot spend his time to better advantage than attending a convention, rubbing shoulders with the other fellow, learning at first hand what he thinks of present conditions and the outlook and ascertaining what is being done in distant localities and by other concerns. Such a process is broadening, strengthening and stimulating.

While one may go through life comparatively isolated, companionship is the natural atmosphere in which we all like to move. Nowhere will the lumber manufacturer, wholesaler or retailer find better, more congenial and agreeable associations than with those engaged in the same line of activity. This does not mean that it is necessary all the while to "talk shop." There are many other interests in common which would form subjects of mutual discussion, and whether at work or play there is no finer, more intellectual or progressive class of business man than the lumberman. He possesses public spirit, he shows his faith in the town or city where he resides by the investment of a large amount of capital in stock, equipment, plant and premises. He assists in every way in building up the community and fosters in season and out of season the splendid home-owning idea which is the bulwark of contentment, solidity and attractiveness of any wide-awake centre.

The lumberman is playing a great part, often silently, but nevertheless effectively, in the upbuild, prestige and permanence of every community. He can do this all the better if he will take the time to attend the annual sessions of the Canadian Lumbermen's Association in Montreal or of the Ontario Retail Lumber Dealers' gathering in Windsor. These conventions are growing in interest and importance, in attendance and results. The sittings this month will stand out more prominently and pleasantly than ever by reason of the brighter trade outlook, sounder financial conditions, general air of confidence and optimistic auspices under which they are held.

### The Daily Chase After Business

In this world we largely get what we give. Let a man show himself friendly, considerate and helpful and others adopt the same attitude toward him, but if he is narrow-gauge, selfish and spiteful, he is viewed with suspicion, distrust and hatred. The tolerant, buoyant, genial representative who carries through all the troubles and turmoil of the daily grind a reassuring smile and affable air, is the one who really gets the most out of life.

It is the same in business. He, who will pass along a few pointers, any little plan or practical proposition that he has evolved for increasing trade, etc., is not only benefiting others but feels bigger and broader himself. Perhaps it is some device for reducing

overhead expenses or eliminating waste or it may be some small invention so that a job can be done easier and quicker. There are various little plans which have saved money, and there is no reason why all these should not be passed along for the general benefit and welfare of one's fellows.

No one in the lumber or any other line of trade, has a monopoly of all the economic ideas of the world. He can be told something by the other fellow, and should give out some thoughts in exchange. Many shortcuts have been established which have resulted in conserving time and money for many a merchant or manufacturer. The higher the general average of any trade is in efficiency, output, service, and development, the better for its individual units.

The man, who is all the time in search for useful and helpful information that will aid him in placing his business on a sounder footing and a more productive plane, is he who is not afraid to answer or to ask questions, but attends conventions, studies trade papers, takes part in discussions and visits his competitors. All these are ways to enlarge one's stock of knowledge, and the more one knows about this business to-day, the greater are his opportunities for success.

It costs next to nothing to be placed in possession of worthwhile practical ideas, and helps the retailer to keep up with the procession. When a man feels that he is right up to the minute in his business and is taking advantage of every opportunity for keeping in close touch with all that relates to its progress and prosperity, he has a sense of pride and duty well done, of efficiency and satisfaction, which makes his career one that stands out successfully and remuneratively.

Recently a paper dealing with the building situation said that the only way to keep people satisfied was to give them changes and new impressions. The old office should be shined up, the yard straightened out and some fresh feature put in the chase after business. This is good advice, so far as material surroundings are concerned, and the same might pertinently said with regard to the lumber merchant himself. He should be an optimist, make no promises he cannot keep, study the wants of his customers, never show discouragement or hold spite, be fair and just in his relations with all those in and about him, and above everything learn to control himself. No man is ever master of his trade, his destiny or his desires until he has first learned the virtue and value of self-conquest, and respects the rights and convictions of others.

### Commercial Use of Waste of the Log

Announcement was made recently at Washington by the National Lumber Manufacturers Association of what is believed to be an epochal development in the economics of the lumber industry. On the authority of Robert B. Allen, of Seattle, secretary-manager of the West Coast Lumbermen's Association, who has been in Washington in conference with the officers of the National Association, it was stated that after a long period of experimentation the problem of carbonizing wood wastes and converting them into briquettes of a thermal value equal to that of the best anthracite coal has been solved and practically developed. General introduction of the new industry made possible by this development is capable of effecting the utilization of the enormous waste material of logging and lumbering with far-reaching effects on fuel supplies, metallurgical and chemical industries, reclaiming of cut-over lands and reforestation of such lands as are not suitable for agriculture.

Not more than 40 per cent on the average of a timber tree as it stands in the forest goes into the shape of lumber at the mill. The waste of limbs and unused portions of the trunk in the woods, and bark, sawdust, slabs and trimmings at the mill account for the remaining 60 per cent. Not all of this waste, from the lumber-product point of view, is waste of material, as varying utilization of these by-products is now made, from rough fuel to paper making and some degree of industrial chemical manufacture; but the amount of waste of material attendant upon the operations of the 30,000 sawmills of the United States and the incomplete utilization of these by-products are in the aggregate stupendous.

The mill wastes themselves to which the new development will be primarily applied are placed by one authority at 46 to 56 per cent of the volume of the logs milled. The kerf, or cut made by the saw, resulting in sawdust, accounts for 13.5 per cent of an average log; the bark waste runs from 10 to 20 per cent; edging and trimming represent 8.7 per cent; slabs the same; careless sawing 3.5 per cent; and sizing to standard dimensions involves a material waste of 1.7 per cent. A fair-sized sawmill, producing 200,000 board feet of lumber daily will have 200 cords of waste material to dispose of. Probably considerably more than half of this material is now thrown into waste piles or burned because there is no market for its utilization. A striking feature of the ordinary sawmill plant is the enormous cylindrical tower of the "burner" whose fires perpetually consume the debris of lumber making. As much as possible of the waste

is used in power production for the mills and where markets are near especially in regions where coal is scarce and costly, much is used for domestic and industrial fuel, either in the rough or "hogged" into small pieces.

General introduction of a practicable system of extracting high grade fuel from wood wastes, together with the incidental by-products is of substantial interest to the general public, because profitable use of what has heretofore been wasted will naturally tend to check the tendency of lumber prices to rise with the depletion of the forests. At present the 30 or 40 per cent of the tree that is utilized has to pay for itself, as well as the 60 or 70 per cent that is wasted.

It is planned to erect ten briquetting mills in the near future, from Vancouver, British Columbia, on the north to Marshfield, Oregon, on the south. The idea in having so many plants being to save transportation costs by locating the briquetting mills near to both sources of material and to markets. Where the briquetting plants are operated in conjunction with sawmills the transportation item is negligible because the waste from the mills goes directly into the briquetting retorts; otherwise, the waste has to be "hogged," a technical term for chipping it into small pieces, in order to be susceptible to economical transportation.

In brief, according to Mr. Allen and his associates, success in developing this process of carbonizing and briquetting wood wastes means (1) an enormous saving in the lumber industry (2) the production of a high-grade fuel at a reasonable price suitable for domestic purposes (3) the development of iron and steel industries on the Pacific Coast (4) production of large quantities of fuel gas, tar and acetone alcohol (5) the facilitation of the clearing of large timber land suitable for agriculture and (6) the reduction of the costs of reforestation on timber lands not suitable for agriculture to a point that will make reforestation practicable.

### Western Mills Expect Lively Season

Reports received from British Columbia are to the effect that all the mills in the province will within the next few weeks be running full blast. The outlook is favorable in the lumber business as one of the most important basic lumber industries of the province and leading financial and business men declare that orders are in sight for, at least, the next six months in both export and domestic markets.

It is believed that the public regards existing conditions as approaching nearer to stabilization than for many years and that the future holds promise for sound operations for some time to come. Of course, one of the most important factors will be the European situation, and if affairs are satisfactorily straightened out across the water, the effect will be world-wide. There appears to be a widespread desire on every side to bring business into that condition of stability which means so much. Optimism seems to prevail in most quarters and there is apparently no reason why the West should not enter upon 1923 with every confidence.

Many western firms say that general world markets were never brighter for forest products than they are now and some voice the opinion that 1923 will be a banner year in the history of the industry.

Although prices have stiffened within the last two months, Vancouver mills are booked for three months ahead and new business is showing for the spring and summer cuttings. The Japanese demand for cedar squares is strengthening. China is buying in greater quantities and is asking for railway ties and railway timbers.

### How Spark Arresters Stop Forest Fires

The destruction of both forests and standing crops by fires caused by sparks from railway locomotives is known to be so great that there will be much satisfaction over the fact that in order to prevent this needless and enormous waste, the United States Forest Service has been co-operating with western railroads in developing a spark arrester, with such apparent success that one series of tests made on the Colorado & Southern Railroad proved highly effective in saving forests, even though there had been a season of prolonged drought. Gratifying results were also obtained on engines operating through the South Park, or what is known as the "Hay Country." Previous to installing the spark arresters, men were kept busy plowing fire guards the entire length of the road through the South Park and other places where fires were common. The use of the spark arresters has eliminated all of this work. The contrivance is very simple to make and install; the work can be done at any of the railroad shops. The netting must be renewed every 30 days to maintain its efficiency. The engineers are greatly in favor of the use of the spark arresters as with them installed they can leave their windows open. When it is considered that dozens of fires are caused every year in Canada and the United States from flying sparks, the value of some such device is apparent.

## Mr. Lovering Again Heads Lumbermen's Section

W. J. Lovering, Toronto

W. J. Lovering was re-elected chairman of the Lumbermen's Section of the Toronto Board of Trade at the annual meeting held recently, when reports for the past year were presented. It was shown that the finances of the organization were in good shape and while not a great deal of business had been transacted during 1922, it was felt that, being the oldest lumber body in the city, a useful purpose was being served and the section should continue to function. It is a representative of both wholesalers and retailers and it was decided that the annual fee should be reduced from \$3.00 to \$2.00 a year. J. B. Jarvis and G. B. Van Blaricom, Editor of the "Canada Lumberman," were requested to prepare a report on the past year's operation in the lumber

industry for incorporation in the annual publication of the Toronto Board of Trade. Sam. McBride was nominated as the representative of the section on the Canadian National Exhibition Association, and J. B. Jarvis as member of the Board of Arbitration. T. A. Patterson, of Mickle, Dymont & Son, Toronto, was re-elected vice-chairman for 1923, and Horace Boulthbee, secretary-treasurer. He was voted the usual honorarium for his services. The committee for 1923 consists of A. E. Clark, W. C. Gall, J. B. Jarvis, C. G. Anderson and S. McBride.

Among those present at the meeting were W. J. Lovering, J. B. Jarvis, Sam. McBride, A. E. Eckardt, W. C. Laidlaw, R. G. Chesbro, A. E. Clark, Hugh Munro, Horace Boulthbee, G. B. Van Blaricom and others. A general discussion took place over the prospects of trade for the coming year and it was agreed that the outlook was getting brighter all the while.

## Wholesale Lumber Firm Holds Reunion

A reunion of the sales, inspection, shipping and office staff of Edward Clark & Sons, Limited, wholesale lumber dealers, Toronto, was held at the new Mount Royal Hotel, Montreal, on December 27th. During the afternoon several hours were spent in conference and in discussion of plans and work for the coming year. A. E. Clark presided over the gathering.

The meeting took place in the metropolis owing to its central location, so far as the eastern staff is concerned, and among those present were,—W.N. Fox, of Toronto, (accountant); D. A. Webster, of Boston, (manager of eastern sales); A. D. Titcomb, of Newport, Mass., (sales and shipping); C. A. Runnells, of Williamsport, Pa., (sales and shipping); E. F. Runnells, of Walton, N. Y., (sales and shipping); E. W. Sanborn, New York, (sales); A. A. Bell, of Swanton, Vt., (general superintendent of mills, piling and production); E. T. Willman, Calumet, Que., (shipping); A. N. Little, of Newburyport, Mass., (shipping); C. C. Jackson, of Toronto, (sales and shipping), and A. L. McIntyre, of Grenville, Que., (shipping).

In the evening a dinner was tendered by the firm to the members of the staff. A silent toast was drunk to the late Edward Clark, the veteran founder of the house, who passed away a few weeks ago. The present head of the organization, A. E. Clark, was honored during the evening and a number of warm tributes paid him. In replying he stated that the conference had been to discuss methods of manufacture, piling and shipping so as to improve the service of the organization to the public. The inspection department work was also gone into and practical suggestions made for the prompt sending in of reports of stocks in the various yards so that shipping could be speeded up. It was necessary that there should be close co-operation between every branch of the business if production, inspection, shipping and sales were to proceed uninterruptedly and the best possible results achieved.

Mr. Clark stated another matter that had been considered was the possible thicknesses and grades of hardwoods required in different territories for the coming year. Inspection and measurement and the best means to employ were also touched upon as well as how each man could widen his activities and do considerable scouting in the way of inquiries, prospects, etc., and sending in valuable information. It was important that the reports of inspectors should be forwarded without delay and in properly classified form so that all the details would be known and the stock not get down to tail

ends before those who had the selling of it realized where they were at.

Another matter that Mr. Clark said had been taken up was the different ways of piling lumber so as to dry quickly, and at the same time get out the stock in the best condition possible. He felt that good results could be accomplished from conferences, that they all had a better appreciation of one another and the work which they were seeking to do, and that they would go out determined to do their utmost and to labor whole-heartedly and unitedly for the success of the organization.

## Shantymen's Christian Association Makes Progress

It seems difficult for some people to understand that the collection is not the most important thing in a religious service. For fifteen years the missionaries of the Shantymen's Christian Association have been visiting as many lumber camps, as their numbers would permit. In all these years their rule has been that no collections are asked for in the camps. This simple rule has commended them to the men who thus see it is pure disinterested concern for their welfare, that brings them there. As the missionaries do not represent any particular church lumberjacks of all classes give them a hearty welcome, the only complaint the men make is that their visits are too few.

So satisfied are these missionaries with the good that is being accomplished that the same men continue in the work year after year, and new ones are being added annually. The work now extends from the Atlantic to the Pacific, and this winter a staff of about twenty men is being employed in Canada, while others are at work in various parts of the United States.

Because of its independent character, no support is received from the Home Mission Funds, and only very little from the employing lumbermen. No guaranteed salary is promised to any man but the needs of their families are supplied by funds sent to the head office of the Christian Shantymen's Association, 15 Toronto St., Toronto; or to the treasurers of the branches in Winnipeg, Vancouver, St. John, N.B. Further information will be gladly furnished to any one desiring it.

## Plays Golf Both Winter and Summer

J. B. Mackenzie, of Georgetown, Ont., who was recently elected chairman of the Orangeville (or No. 6) District of the Ontario Retail Lumber Dealers' Association, is an ardent golfer. It was only about a year ago that he took up this pastime and he has developed into a "fan" and would much sooner miss his mid-day meal than making the daily round on the links.

Mr. Mackenzie has invited the members of the Orangeville District to hold a spring meeting in Georgetown, and among the added attractions is a game of golf over the nine-hole course which should be in good shape by the latter end of May.

A recent despatch from Georgetown conferred fame on "J. B." It stated that he and his son and a guest from Toronto were playing on Christmas Day. Mackenzie, Jr. was trying out a new driver which he found in his Xmas stocking. As the speckled trout played about in icy waters, the golfers burrowed in snowdrifts in fairly successful drives. The balls were painted red for the occasion. Mr. Mackenzie believes that he has achieved a record in playing golf on Christmas Day and doubtless he will be the first man out upon the fair-ways when the snow has melted and Mother Earth shows again her smiling countenance.

## Logging Operations Grow Greater in East

There is every indication of buoyancy in the lumber market and the optimism of the lumbermen is being expressed in the expansion of operations in the woods. In all sections of New Brunswick the original estimates of cuts are being expressed in the expansion of operations in the woods. In all parts of the province the original estimates of cuts are being exceeded and the total cut will be much larger than was anticipated but will not reach the total of three years ago.

The department of lands and mines has forty-two scalers and sixteen helpers at work on the various operations. The North Shore operations are going on with the total cut likely to be considered in excess of what was expected.

In other parts of the province there have been large increases. On the Big Cedar, a tributary of the Tobique, the Stetson Cutler Co., are cutting in an operation of 5,000,000 feet which they did not contemplate at all at the beginning of the logging season. In Mada-waska a pulpwood operation of 10,000 cords for the Fraser Companies, Limited, at Edmundston, has been enlarged to 15,000 cords.

## Fred. Bigwood Heads the Kiwanis Club

Fred. H. Bigwood, Toronto

Fred. H. Bigwood, of the Canadian General Lumber Co., was elected president of the Senior Kiwanis Club, Toronto, for 1923, at the annual meeting held recently. Mr. Bigwood has long been connected with the Kiwanis organization, and at the big International Convention, held in Toronto in June last, he was the energetic chairman of the committee of arrangements. He carried out his duties faithfully and successfully and proved that he is an organizer of ability, and at the same time never becomes ruffled or riled. He is calm under all conditions and should make an excellent presiding officer. Mr. Bigwood, who is a brother of W. E. Bigwood, Toronto, former president of the Canadian Lumbermen's Association, was born at Winooski, near Burlington, Vermont, and has been identified with the lumber vocation all his life. While in Vermont he was largely engaged in the screen door business and some fifteen years ago came to Toronto, entering the sales department of Graves, Bigwood & Co., whose mills are at Byng Inlet. About that time the company started extensively in the manufacture of box shooks, and F. H. Bigwood has devoted special attention to the management of that department. He was elected a director of the Canadian General Lumber Co. at its formation five or six years ago and to-day has charge of the office sales of that organization.

"Fred" as he is generally known, is a man of versatile accomplishments. He won the fat man's race at the annual picnic of the Wholesale Lumber Dealers' Association held at the Lake Shore Country Club last summer, and two years previous at Grimsby he captured the trophy for being "the handsomest man on the grounds." Now he is president of the Kiwanis Club which position he will no doubt fill with credit to himself and satisfaction to the organization.

## Mr. Shirton Retires From Municipal Life

K. J. Shirton, of the William Shirton Co., Dunnville, Ont., who has been Mayor of that town for the last two years, has retired from municipal politics. He filled the office faithfully and well during his regime. As far as his own business was concerned, he showed every faith in the prosperity of the town, erecting a large new shed for storing dressed lumber and also an attractive new office building.

Mr. Shirton is a public-spirited citizen, not only taking interest in the affairs of Dunnville but also in the welfare and advancement of the Ontario Retail Lumber Dealers' Association of which he is vice-president. It is expected that at the forthcoming annual meeting, which will be held in Windsor on January 24th, 25th and 26th, he will succeed J. C. Scofield, of Windsor, as presiding officer of the organization.

## Madawaska Lumberman Wins Suit on Appeal

Judgment has been rendered by the Supreme Court of Canada in the appeal case of J. P. Moran, of Madawaska County, N.B., vs. the Hammond Lumber Company with a verdict awarding the plaintiff Moran \$10,900 and costs, with the costs of the courts below.

This judgment upsets the decision which was given by the Supreme Court of New Brunswick when the case was heard on appeal from the decision rendered by Mr. Justice Barry refusing the claim of the plaintiff, although the damages had been assessed by the jury at the trial as \$10,900, the amount which has been awarded by the final decision of the Supreme Court of Canada. The judgment upholding the decision of Mr. Justice Barry, which was rendered by the Supreme Court of New Brunswick, was not unanimous, Mr. Justice Crocket dissenting at the time.

This action arose out of contracts let by the Hammond Lumber Company for the cutting of some five million feet of logs, which were sub-contracted for amongst various operators. Among these was the plaintiff who had taken a contract to supply a million. This arrangement was later upset by the departure of the contractor who absconded without making the payments to the sub-contractors. A new verbal agreement was then made to bridge the

difficulty between the plaintiff and the defendant company which was later repudiated by the company on the grounds that no contract existed, no written agreement having been made.

The trial of the action was heard before Mr. Justice Barry with a jury, but the plaintiff's claim was disallowed by His Honor although the jury assessed damages amounting to \$10,900. The case was then appealed before the Supreme Court of New Brunswick where this decision was upheld although Mr. Justice Crocket dissented. Later in November of 1922 the case was argued before the Supreme Court of Canada.

## Western Lumber Retailers Going To Coast

Arrangements for the Lumber Dealers' special train from Winnipeg to Vancouver have been completed, leaving Winnipeg January 28. The delegates to the annual convention of the Western Retail Lumbermen's Association will go over one system, returning over the other. Regina, Calgary, Edmonton, Nelson, Prince Rupert and Vancouver boards of trade have extended invitations to banquets at various points. The purpose of the excursion is to discuss the trend of prices and trade conditions for supplying the prairies with lumber this year. Two days will be spent in conference with representatives of the Pacific and Mountain Mill men.

There will be an enormous increase in volume of lumber consumed on the prairies this season, estimates by prominent retailers and jobbers are as high as one hundred and fifty million feet, but the consumers still owe twenty-five million dollars of old accounts on the prairies, and arrangements must be made to carry these over until next October, as well as supply new credits.

## Mr. Dick Declines Aldermanic Honors

Alex. Dick, manager of the Alfred McDonald Lumber Co., Limited, Peterboro, Ont., on nomination day had his name placed on the list for both the Board of Education and for aldermanic honors in Peterboro although he was away at the time paying a visit to the bush operations of the company. He was urged by a large number of citizens to allow his candidature to stand but had to decline. Mr. Dick is a very busy man at present and outside of his business activities, is vice-president of the Kiwanis Club and chairman of the Entertainment Committee of the Grand Encampment, I.O.O.F., which will meet in Peterboro this summer. Mr. Dick believes that the year upon which the lumber industry is just entering will be one of the best in the history of his firm,—at least that is the way it looks locally. The company have one camp in and a large number of jobbers and are bringing out as much timber as they can.

## How Homes Have Increased in Toronto

The year 1922 showed an increase of over fifty per cent. over the amount of building in 1921 in Toronto. The figures as received by the city architect's department show that buildings to the value of \$35,213,000 have received permits this year. In contrast to this is the permits totalling \$23,877,000 issued last year.

In brick dwellings alone there has been an increase of over six million dollars. The number for 1921 was 2,931, while 1922 has 4,654. The brick dwellings erected are of much the same class as last year, the majority running from \$4,200 to \$4,300 in value.

While Toronto homes have been increasing at a very rapid rate, the increase in the number of stores is even more startling. Last year 269 stores were erected, and this year 539, an increase of just over one hundred per cent.

## Why Have Railway Ties Changed Colour?

In an age of rapid changes even the railway tie has become different. Why are the ties, piled beside the track ready for installation in the roadbed, black instead of the customary natural colour of the wood?

The black appearance results from treatment with creosote oil, the object of which is to prevent decay and thus lengthen the service life of the ties. Just why or how the creosote treatment does this is, however, not generally understood. It is explained by the Forest Products Laboratories of Canada, Forestry Branch, Department of the Interior, where extensive research on the preservative treatment of timber has been conducted, that the decay of wood is due entirely to the action of low forms of plant life known as wood-destroying fungi. These fungi utilize the wood substance as food, destroying it in the process. The creosote oil, which is forced deeply into the wood by powerful pumps, poisons the food supply of the fungal plants, making it impossible for them to destroy the timber. As properly creosoted ties in a well-made track will last twice as long as untreated ones, it is certain that they will soon be in general use on all Canadian railways.

### He Specializes in Posts, Ties and Poles

J. Murdock, of Durham, Ont., is a widely-known lumberman in that part of Grey County, who has devoted all his life to the business, specializing in poles, posts and railway ties. He recalls many stirring reminiscences of his career, and a chat with him is most interesting.

Mr. Murdock was born in the village of Dornoch, some ten miles north of Durham, in the township of Glenelg, a little over forty years ago, and worked on a farm there. He did considerable logging in the winter time, and took out railway ties, cut posts, etc., in the bush. He broadened his experience by getting a job in saw-

Mr. and Mrs. J. Murdock and family,  
Durham, Ont.

mills at different localities, and some thirteen years ago secured a position as inspector for the C.P.R. of ties, posts, poles, etc. He was with the railway five years and then launched out into business on his own behalf in Durham where he carries a general line of lumber and shingles, poles, posts, coal, etc. During the past year he shipped out over fifty carloads of material from different points, and states that he has unloaded another fifty. Mr. Murdock looks forward to the coming year with considerable optimism.

### Mr. Brown Asks Some Perplexing Questions

Fred Brown, of Fort Frances, Ont., in a recent timely letter to the press on the protection, or rather lack of it, in connection with the forest resources of Canada, asks some pertinent questions which should set all Canadians not only thinking but acting.

Mr. Brown says:—

Is it true, or is it not true, that Canada denudes about 35,000 acres a month for pulpwood exports alone?

Is it true that the denudation of forest land for pulpwood exports in eight months up to November 30, to be precise, has reached an aggregate of 332,000 acres?

It is true, or is it not true, that in 1922 one million and one half acres of timber and pulpwood were destroyed by fires? This stupendous acreage concerns only Ontario, Quebec, New Brunswick and Nova Scotia. British Columbia, Alberta and Saskatchewan have had their fires, too, and it is known, perhaps not to Mr. Hall Caine, that one single conflagration in the Western Mountains made out of one million acres of splendid forest one million acres of stumps, windfalls and insect-breeding places.

Is it true, or is it not true, that in the Provinces of Ontario, Quebec, New Brunswick alone over two hundred million cords, or, approximately, 75,000,000 acres of pulpwood are destroyed and useless for manufacture by the budworm alone?

Does anybody in Ontario know the acreage of forest destroyed by primary fires, as well as fires in second growth? Does anybody, and by anybody I mean the Department of Forestry as well as foresters and laymen, know the value of potential timber wealth destroyed during the year 1922?

In view of these questions, I would like to ask another questions. Is it not high time to have a survey made of our burned-over forest land, so that the Department of Forests can evolve a sane and practicable working plan for reforestation? Truly the time is not far distant when the whole of Canada will be a forest bankrupt. It is unquestionably up to the various Governments (Pro-

vincial and Dominion as well) to see to it that Canada shall not share the fate of the Mediterranean countries and also of England. The history of these countries seems to prove that the gap in the local timber supply is never filled by private enterprise, in spite of the stimulus afforded by the high prices of wood goods.

### Lumber Industry Reports Prosperous Year

The production of both hard and softwood lumber in the United States for the year 1922 is placed by the National Lumber Manufacturers Association at approximately 32,000,000,000 board feet, as compared with the estimated output of 25,026,000,000 for 1921 and 33,798,800,000 feet for 1920 according to official statistics. While 1922 did not come up to the 1920 level, which marks the high point of production in recent years, it is considered to have been a creditable and satisfactory achievement in view of the extraordinary depression of the industry in 1921.

"The industry as a whole," says Wilson Compton, of Washington, D.C., Secretary and Manager of the Association, "is in an exceedingly favorable economic condition. Since November 1921, outside of the customary mid-winter drop in lumber shipments, there was until August of this year a steady reduction of stocks on hand, although production was heavy, and shipments, although substantially greater than production, fell continuously behind the volume of new business. Throughout the year the rate of accumulation of unfilled orders varied from four per cent. to fifteen per cent. of the current production. Since July irregularity and shortage of transportation have resulted in current shipments constantly falling below production. The result for this period was an extraordinarily depletion of stocks at mills favored by transportation and a large accumulation at some unable to secure adequate transportation service; and production has been constantly in excess of shipments. Employment has been virtually on a full time basis at somewhat increased pay, and the returns to mill owners have been satisfactory though happily unaccompanied by runaway market of price inflation at the mills. There is no present indication that the lumber situation in 1923 will not be as good as in 1922; on the other hand, there are many signs that it will be as good or better; and so far as fundamental conditions of supply and demand go, good for a number of years to come."

### Old Bogey of Lumber Tariff Once More

Negotiations have been opened through proper channels between the United States and Canada, so says a recent report from Washington, to consider whether and countervailing tariff duties may be placed in the United States on imports of Canadian lumber. At the same time, it was added, that President Harding has no propositions before him involving immediate alterations of present tariffs on the products.

Provisions of the Fordney Tariff Bill now in effect, it was said at the Tariff Commission, provide that the United States may place a tariff on certain types of lumber which now come in free, when produced in a country which puts a duty on similar products exported to it from the United States.

Canada was said to have a 25 per cent duty in effect on imports of the United States types of lumber in question and thus to have raised the question as to whether United States schedules should legally be raised to an equal amount.

### New Line of Foot Valves Put On

A new line of Foot Valves, as manufactured by The Smart-Turner Machine Co., Ltd., Hamilton, Ont., is shown by the accompanying illustrations. Fig. O-115 shows the screwed valve, up to and including six inch. The body of the valve is made extra large, so as to give an ample passage for the water past the valve when it

O-112

O-115

rises off its seat, and with the large valve body a greater area is obtained for the strainer.

In sizes of eight inch and larger, the design is as shown by Fig O-112, there being two leather faced flap valves mounted on a brass hinge pin. The valve is very simple, and gives good service.

### Activities of English Lake Lumber Co.

As announced in a recent issue of the "Canada Lumberman," the English Lake Lumber Co., Limited, lately purchased timber limits of about 110 square miles in area from Murray & Gregory, Limited, of St. John, N. B.

On the property at Lake Frontier, Que., is an up-to-date sawmill. The English Lake Lumber Co. intend operating this plant, sawing lumber, shingles, ties and pulpwood, while dressing facilities will also be available. The English Lake Lumber Co. will also build a mill at English Lake, Maine, where pails, tubs and boxes for the United States market will be manufactured. The boundary line between Quebec and Maine is only a very short distance from Lake Frontier.

The directors of the new company hold all the capital stock and consist of Chas. Bienvenu, president; B. C. Howard, vice-president; J. W. Bienvenu, treasurer; Chas. B. Howard, secretary; P. Bienvenu, manager.

Mr. Charles Bienvenu, president of the organization, is a resi-

Chas. Bienvenu, President,  
English Lake Lumber Co.

B. C. Howard, Vice-President  
English Lake Lumber Co.

dent of D'Israeli, Que., and has been in the pail and tub business all his life, having made a great success of this line. His son, Philippe, who is the manager of the English Lake Lumber Co., has had several years' experience in the lumber arena, having operated a mill of his own on the Gatineau River.

J. W. Bienvenu, treasurer of the company, is another son of Charles Bienvenu, who has had considerable insight into the manufacture of pails and will be placed in charge of the new pail mill at English Lake.

B. C. Howard, vice-president, of the company, and his son, C. H. Howard, secretary, reside in Sherbrooke, and are the owners of the B. C. Howard Co., Limited, who have large timber limits, together with an up-to-date band sawmill and dressing plant at Lake Frontier. They were the first to start a mill at that point and all kinds of lumber and pulpwood are dealt in. They have succeeded in building up a big business, Mr. Howard being identified with the lumber line for nearly thirty years.

The Bienvenu and the Howard families have known one another for many years and have done considerable business for a long period on a sound, friendly basis. All the members of the English Lake Lumber Co. are progressive business men, and backed by the practical knowledge and sane judgment, possessed by the officers, there is every reason to believe a bright future awaits this concern which is taking out 8,000,000 feet of logs this winter.

### Judgment Given in Lumbermen's Case

Mr. Justice Morrison, of Vancouver, has handed down judgment in the case of the Pioneer Lumber Company of Seattle vs. the Alberta Lumber Company of Vancouver.

The case, which is of unusual interest to lumbermen, was tried in Vancouver and was strenuously contested, both concerns being large and well known lumber dealers. Commission evidence was taken at Chicago, Fond du Lac, Wisconsin and Prince Rupert.

According to the judge's finding the dispute is apparently occasioned through a strange error, which presumably occurred in the lumber yards of the Alberta Lumber Company. The plaintiff ordered No. 3 common with clears all in. The cars of lumber at

Chicago were shown on commission evidence to contain box and shop lumber and worse. The point at issue, therefore, was the identity of the lumber. The plaintiff was able to prove by freight bills and car record sheets of Cook Lumber Company at Chicago the continuous identity of the lumber from the defendant's yards to the lumber yards of Cook Lumber Company at Chicago, who refused the lumber as being off grade. Defendants accordingly were held liable, the plaintiff having shifted the burden of where and how this inferior lumber became loaded in the car invoiced to the plaintiff. The case was further complicated by the fact that there was a substituted bill of lading issued to replace the original bill of lading, the car having been sold in transit. The judgment is for \$1,058.39 and costs.

### Eastern Lath Not so Firm in Price

Prices in the United States market for lath have suffered considerable of a slump the past few days which, it is feared, may have some effect upon the volume of production in New Brunswick, says a recent report from the East.

Local lumber firms engaged in the lath trade said to-day that prices at Boston had slumped to \$7.50 per thousand, which meant that about the best which laths would now net local shippers was \$5. Recently \$6.75 and as high as \$7 were netted to shippers, but during the holiday season the market has been sagging and recently has come down with more or less of a thud.

It was explained that at this season prices for laths were expected to sag somewhat. Building operations naturally ease off considerably at this time, there is a tendency for all such markets to sag during the holiday period when stocks pile up and little work is going on; about the first of April, when building operations are expected to become brisk once more, it may be that the lath market will "come back" again.

### National Wholesalers Annual in Pittsburgh

Plans are progressing in connection with the Thirty-first Annual Meeting of the National Wholesale Lumber Dealers Association to be held at the William Penn Hotel, Pittsburgh, Pa., Wednesday and Thursday, March 21st and 22nd, 1923. The program for the Convention is in charge of a committee consisting of:

W. H. Schuette, president, Pittsburgh, Pa. C. A. Goodman, Sawyer-Goodman Co., Marinette, Wis. Dan. McLachlin, McLachlin Bros. Ltd., Arnprior, Ont. J. W. McClure, Bellgrade Lumber Co., Memphis, Tenn. F. R. Babcock, Babcock Lumber Co., Pittsburgh, Pa.

The Pittsburgh Wholesale Lumber Dealers Association will act as host during the convention, and a committee of that Association has been appointed to look after entertainment and other arrangements of a local color. This committee consists of: J. B. Montgomery, chairman, Alex. Wilson, R. B. Allen, C. V. McCreight, E. H. Stamm and J. G. Criste.

This will be the first meeting of the Association to be held in Pittsburgh for a number of years, and those who recall that city's reputation for entertaining lumbermen will know that no effort will be spared to make this coming convention one of the most successful in the history of the organization.

### Midwinter Calm in the Lumber Trade

The holiday week in the lumber industry was characteristic of the period in this industry in the low level of production, which fell to less than 116,000,000 feet for the mills reporting to the National Lumber Manufacturers Association, Washington, as compared with a peak production in October of 260,000,000 feet. But bottom was found somewhat sooner than in the corresponding week of 1921, when production was only 103,000,000. Although orders and shipments also sag sharply at this time, it is the custom of the trade to ease off production regardless of the market in deference to the vacation spirit of employees and the need for repairs and alterations in the mills. Thus, while production declined more than 58,000,000 feet as compared with the preceding week, itself a low week, shipments declined only 35,000,000 feet and orders 38,000,000.

Stated in percentages, shipments for all reporting mills were 150 per cent and orders 145 per cent of current production. For Southern Pine mills the percentages were 142 and 126, respectively; and for the West Coast mills 171 and 175. That the let-up for the holiday week this year was greater than usual—due doubtless to the high pressure under which the mills have been operating for a long period—is indicated by the reports from the 344 mills that have a normal production figure for the week; actual production for them being only 51 per cent of normal, shipments 77 and orders 76 per cent of normal production.

## The Effect of Growth Rate on the Strength of Softwood Timber

(Continued from page 34)

- (4) The optimum growth-rate may be quite different in different softwood species.
- (5) Softwoods, such as Douglas fir, larch, and certain hard pines, which have a high proportion of hard summerwood, have an optimum rate of growth which is more rapid than the optimum rate for such woods as spruce, balsam fir and white pine which have less conspicuous summerwood.
- (6) The falling-off in strength due to very slow growth is less than the reduction due to very rapid growth.

La Compagnie Frank Blais, Limited, Amos, Abitibi district, Quebec, is a new enterprise incorporated to manufacture and deal in lumber, pulpwood and ties.

Fig. 7 Transverse sections of spruce (magnified) slow, medium and fast growth

# What the Lumber Trade is Doing in Canada

Sir William Price has been elected a director of the Montreal Trust Company.

Colin C. Tyrer, of Halifax, N. S., was a recent visitor to Montreal.

George Asselin, Coteau Station, Que., is putting in the foundations for a new sash and door plant which will cost about \$5,000.

La Compagnie V. Lemay, Limited, St. Jean Deschaillons, Que., is a new firm with a provincial charter to manufacture boxes, baskets, handles and other wood products. Capital \$10,000.

Hugh H. Reid, of the sales staff of Laminated Materials, New Westminster, B. C., is on a business trip to Montreal, Toronto and other cities in the East.

W. W. Carter, president of the Fesserton Timber Co., Toronto, who has been confined to the house for some weeks owing to an attack of neuritis, is able to be around again.

Lois River Pulp & Lumber Co., Quebec, Que., was recently incorporated to manufacture and market lumber and pulpwood. Capital \$49,000. Two of the incorporators are E. P. Cleary of Sillery, Que., and E. W. Charlton of Outremont, Que.

J. A. Carriere & Co., Casselman, Ont., lumber dealers, have extended their operations and are now in a position to undertake building contracting in connection with their well established lumber business.

The ratepayers of Brampton, Ont., recently authorized a loan of \$20,000 and a fixed assessment of \$10,000 for ten years to the McIlroy Belting & Hose Co., of Hammond, Ind. The American firm are contemplating the erection of a \$20,000 plant in Brampton, to manufacture all kinds of machinery belting and rubber products.

The Soo Lumber Co., Sault St. Marie, Ont., have started the work of remodelling their office and are also making preparations for the erection of a two storey, 21 x 80, tile and brick warehouse. The two items will cost about \$8,000 and the northern lumber firm expect to have their premises, second to none in appearance when the job is completed.

A Toronto lumberman who visited several camps in Haliburton, Hastings and Frontenac districts, states that the quantity of lumber being taken out this season is considerably larger than last year. Many portable mills are operating and producers are very firm in getting the price they have placed upon their product. They are receiving many inquiries for stock.

Eastern representatives of British Columbia mills have received word that a new price list is taking effect at once. There is an advance from 50 cents to \$5.00 on all grades of western forest products, clears being up the most. Mill stocks in many cases are very low and the American market is reported to be exceptionally firm and insistent in demand.

Toronto lumber delegates to the Canadian Lumbermen's Association which will be held in Montreal on Wednesday and Thursday, January 24th and 25th, will leave Toronto by the Canadian National on the night of Tuesday, January 23rd. Arrangements for berths, transportation, etc., are in the hands of D. C. Johnston, Frank H. Harris and Roy Halliday with whom all intending visitors to the convention should communicate.

The Donnacona Paper Co., who operates a large newsprint mill at Donnacona, near Quebec, has an output of 100 tons a day and intends extending during the coming season. Production will be doubled by the addition of new machines and extra equipment in the groundwood department. It is expected that the new installa-

tions will be in shape and operating by this time in 1924. The new paper machine will, it is said, be the widest in the world, rivalling those which were installed some months ago at Iroquois Falls by the Abitibi Power & Paper Co.

Thomas A. Wark, who was recently elected a director of the St. Maurice Paper Co., was for six years superintendent of the Finch & Pruyn Paper Co., of Glens Falls, N.Y. He is a practical papermaker and operated the Tidewater Paper Mills at Brooklyn, N.Y. and also the newsprint and kraft plants of the St. Maurice Co. at Cap de la Madeleine, Que.

A timber berth offered for sale recently in New Westminster, B.C., proved too big a proposition to be handled at the present time, and remains unsold. It was put up at auction by Crown Timber Agent Ed. Walmsley, but no bids were received. The berth in question, No. 590, situated on the east side of Stave Lake, is 2,462 acres in extent, and the upset price was something over \$83,000. It is the biggest limit in point of value ever offered for sale in the railway belt.

With the granting by Order-in-Council of \$10,000 each to Mr. Justice Riddell and to Mr. Justice Latchford, the Ontario Government has finally closed the accounts of its Timber Inquiry Commission. The remuneration just allowed augments the sums of \$2,000 each which the judges in the probe had already received, and it swells the total of the cost of the adjudicators alone to the substantial figure of \$24,000. This payment, it is stated at the Parliament Buildings, Toronto, is the last one which will be made on account of the timber investigation.

Frederick Chase, field manager of the timber interests of the big contracting firm of Foley, Welsh & Stewart, was in Edmonton recently, having come down from the north and brought the information that his company would erect a pulp mill valued at \$3,000,000 in the Grand Prairie country, provided suitable freight rates could be obtained for the E.D. & B.C. Railway which would allow them to compete with other plants in the West. Mr. Chase states that if the timber lying south of the territory which they are seeking, is granted, Foley, Welsh & Stewart will erect mills capable of shipping out 5,000 cars of pulp annually while the enterprise will give employment to hundreds of men.

## Busy Week in Paper and Lumber Circles

The week of January 21-27 will be a very busy period in Montreal for the lumber, pulp and paper and allied industries. In addition to the Canadian Lumbermen's Convention, and the meetings of the Canadian Pulp & Paper Association, the Quebec Forest Protective Association will hold its annual meeting on January 23rd at the Mount Royal Hotel. Quite an extensive programme has been prepared, involving two sessions. Mr. S. L. de Carteret will preside.

The following is an outline of the programme:—Our Forests: Hon. Honore Mercier, Minister of Lands and Forests, Quebec. Why is forest protection necessary? (a) From the Forester's Point of View:—Dr. C. D. Howe, Dean, Faculty of Forestry, University of Toronto. (b) From the Operator's Point of View:—R. F. Kernan, Manager Donnacona Paper Co. (c) From the Public Point of View:—Prof. Stephen Leacock, McGill University.

Discussion: Co-operative Forest Protection:—E. T. Allen, Forester, Western Forestry and Conservation.

Discussion: Wireless Telephony:—Description and demonstration of apparatus as practicable and valuable for forest protection:—R. B. Adams, U. S. A. Forest Service.

### Says Paper Association Must Broaden Out

The annual meeting of the Canadian Pulp & Paper Association will be held at the Ritz Carleton Hotel, Montreal, on Friday, January 26th. George M. McKee is the retiring president and it is expected that he will be succeeded by H. F. E. Kent, of Toronto.

Edward Beck, manager of the Association, says that the forthcoming gathering will be an epoch-making one. The organization is facing a situation wherein it must either broaden out its general policy or decide to continue as it is. There is a strong move for the widening out of the Association and a series of meetings will decide whether this is to prove successful, or not.

During the past ten years, said Mr. Beck, the work of the Association had been principally devoted to matters strictly connected with the advancement of trade among its members. This would, of course, continue, but the new movement was toward enlarging this activity along the lines of industrial research.

### Port Arthur Operators Get Berths

Port Arthur operators were successful tenderers on two of the three timber berths disposed of by the Provincial Department of Lands and Forests in Toronto lately. They are the Newago Company, Ltd., and J. O. Stewart, who receive three and six mile allotments, respectively. Prices on all three timber berths are said by departmental officials to be very satisfactory.

The Newago Company, Port Arthur, secured three square miles of pine timber on portions of Concessions 5, 6 and 7, in Lyon township, Thunder Bay. Their bid was accompanied by a marked cheque for \$700. They tendered \$12 plus \$2.50 for pine, 20 cents plus 10 cents for ties, and Crown dues (25 cents) for fuel wood.

Six square miles of territory adjacent to the Grand Trunk Pacific, east of Horne, was secured by J. O. Stewart, Port Arthur, whose tender was accompanied by marked cheque for \$500. For pine he pays \$6 plus \$2.50; spruce, poplar or basswood, \$4 plus \$2; for timber \$2.50 plus \$1.50; spruce pulpwood 20 cents plus 80 cents; other pulp 60 cents plus 40 cents; ties 4 cents plus 10 cents; fuel wood 25 cents plus 25 cents.

The Border Lumber Company, Fort Frances, was the third successful tenderer, securing three miles north of the Indian Reservation, north of Douglas Island, in the Rainy River district.

### Mill Production Suffers From Low Water

George Oberton, of Canton, N. Y., in a recent letter to the "Canada Lumberman," says that approximately all the pulp and paper mills in Northern New York are running just at present below normal capacity on account of low water. Somewhere in the neighborhood of 80 mills have been affected by this condition. During the first week in January cutting and skidding of logs in the Adirondacks ceased as the majority of lumbermen were waiting for snow.

### Quebec Firms Have Faith in Future

Those who own pulpwood limits or deal in pulpwood will be interested in the latest developments of the newsprint industry. Canada is making a strong bid for this business in all parts of the world, and at the present rate of expansion will soon overtake the U. S. as a producer of newsprint. It remains to be seen whether the Dominion is not overdoing it, and whether the output of the new mills and of the extensions to existing plants will not result in a larger tonnage than can be absorbed. One idea is that owing to the growing scarcity of pulpwood, many U. S. newsprint mills will be forced to go into other lines of paper-making and that the trade of these converting mills will come to this country.

Two large Canadian companies—the Donnacona Paper Co., and Price Bros., Limited, announce programmes of enlarged production. The first-named has ordered a very wide paper machine, which will be made in England, while Price Bros., will increase their capacity from 300 tons per day to 900 tons per day, or 280,000 tons per annum,

the largest production in Canada. The increased output will be gradual and will not reach the peak until 1926. This is the corollary of the proposed development of the power resources of Lake St. John and the Saguenay River, which it is estimated will result in a saving to the company of a million dollars per annum, by the substitution of electricity for coal. The company's limits are estimated to contain about 20,000,000 cords of pulpwood.

There are projects for other mills, but the action of Price Bros., and other large companies may have a restraining influence on capitalists who are interested in promoting new mills. It is evident that Price Bros., and the Donnacona Co., and others who intend to extend their plants have great faith in the future of the Canadian pulp and paper industry.

### Fire Visits Plant of Spruce Falls Co.

Owing to spontaneous combustion in the chip bins at the digester building of the Spruce Falls Co., at Kapuskasing, Ont., on January 7th, two men lost their lives and considerable property damage was done. The citizens fought the flames for twelve hours in 46 below zero weather. The new sulphite pulp plant of the company, which had been erected at a cost of millions of dollars had only been in operation about a month.

The men who lost their lives were R. E. Doherty, of Ashland, Wis., superintendent of power, and William Shingo, of Oshkosh, Wis., expert acid maker. They had taken up their position on top of the chip bins and were fighting the flames when they were engulfed in a sea of flames and smoke. The remains showed that they had died of asphyxiation. It was only through the good water-works system and the heroic efforts of citizens that the adjacent buildings of the company were saved.

Operations will partially cease for some time until repairs are completed.

The output of the Spruce Falls Co., of which S. J. Sensenbrenner, of Neenah, Wis., is president, S. A. Mundy, vice-president and J.C. Kimberly, secretary, is 120 tons of sulphite pulp per day.

### Wayagamack Company Had Good Year

The Wayagamack Pulp & Paper Co., whose plant is at Three Rivers, Que., is now in a comfortable working position and during the past year good profits were shown, according to the annual report which was presented at a meeting held in Montreal recently. The report shows a net improvement of more than half a million dollars' profits over the preceding year. The profit for the period under review having been \$373,030 as compared with an operating loss of \$156,712 during the 1921 period. A striking feature of the statement is the transformation in the company's balance sheet brought about chiefly through giving effect to the \$1,374,500 bond issue of last spring, this resulting in betterment to the extent of over 150 per cent. in working capital position.

Provision for bond interest of \$260,854 bond discount of \$10,000, depreciation of \$160,000 and stumpage dues of \$50,068 leaves a deficit for the year of \$108,892, as compared with a deficit of \$807,640 in the previous year, during which, however, dividends amounting to \$150,000 were paid, and stumpage dues amounted to \$120,928. Last year's deficits brings the profit and loss balance down to \$901,922, nearly a million less than at the end of 1920.

The balance sheet portion of the exhibit shows the company to be in a much more comfortable working capital position than was the case the previous year. Loans secured by pulp wood and other securities disappear in the 1922 report as do also bills payable on limits to the amount of \$100,000 and another item of \$200,000 representing bills payable on limits secured by bonds. A loan of \$600,000, which was secured by \$1,000,000 of the company's bonds, has also been eliminated. On the other hand the company is a borrower at the banks to the extent of \$425,000; cash at \$69,733 compared with \$66,202. Accounts receivable are up from \$679,872 to \$856,901. An item of \$23,777 representing investments is wiped out, while inventories are down to \$1,528,515, as compared with \$2,797,906.

### As Going Concern

Saw and Planing Mill and stock of lumber in good town, stock of logs being taken out, and 5,000 acres of timber (more available). Turn-over \$100,000.00 per year. Strictest investigation will convince you this is a money maker. \$20,000.00 cash, balance arranged. Box No. 72, Canada Lumberman, Toronto. 1-4

### Logging Contractor

We have 600 Million ft. saw timber on west coast of Vancouver Island, and want a logging contractor who has sufficient logging outfit to furnish us with 100 thousand feet of logs per day. Address Churchill Cedar Co., P.O. Box 100, Vancouver, B.C. 2

### Attention! Lumber Exporters

The representative of an old established English House of lumber importers is shortly expected in Canada. Any house in the export lumber trade desiring to get into touch with this gentleman should communicate immediately with us under the heading "Box No. 89, Canada Lumberman, Toronto." 2

### 15,000 Acres Freehold

For sale at Riversdale, Colchester County, N.S., 20 million feet standing 30% hardwood, 70% mostly spruce, will cut 2 million annually in perpetuity. 45,000 cords pulp and pitwood estimated, 3 private and 2 graded sidings all property alongside railway and well opened up—2 portable mills, 4 camps camp utensils, logging outfits, 2 gasoline and 1 steam tractors, 12 trolleys, 5 horses, sleds and waggons, large stable and barn, 4 rented houses in Riversdale and ground rents.

All in price of \$120,000. Death of sole male partner necessitates sale. Write Primrose Bros., Pictou, N.S. 2

### For Sale Cheap

Circular Sawmill, Building and Machinery. Steam Feed, suitable for Ties and Lumber.

also

Small two-storey Brick Factory, well-located, with or without woodworking machinery. Apply to John Harrison & Sons Co., Limited, Owen Sound. 24 T.f.

A SPLENDID OPENING—OPPORTUNITY IS OFFERED to a thorough lumberman of executive ability with good active selling and buying connection, to join another lumberman who is well known and connected in the export trade, with a view of starting a wholesale and export business. Advertiser has \$25,000.00 available and would expect associate to be also financially interested. Negotiations strictly confidential. Address Box No. 94, Canada Lumberman, Toronto. 2-5

## Miscellaneous

## LOG HAULERS

### FOR SALE

3 large Lombard Steam Log Haulers.  
1 small Lombard Steam Log Hauler.  
30 pairs Log Hauler Sleds.  
1 large Log Hauler Snow Plow.  
All equipment in good condition.  
Apply to  
KELLOGG LUMBER COMPANY,  
24-3 Long Pond, Maine.

### TREES FOR PRAIRIE FARMERS

By a plan inaugurated in 1901, the Department of the Interior, through the Forestry Branch, has distributed over sixty million forest trees for planting shelter-belts on the farms of Manitoba, Saskatchewan and Alberta. The plan is a co-operative one, the Government supplying the seedling trees free, except in the case of evergreens, and giving instructions for their planting and care, while the farmer provides the labour, prepares the land in advance, and agrees to keep it permanently in trees.

# Review of Current Trade Conditions

## Montreal Sees Steady Business if Prices not Inflated

In Montreal, the lumber trade is keeping up in good style. Naturally one expects a falling off in orders about this period, but wholesalers state that in view of the time of the year, business is quite satisfactory. This applies to the purely local demand and also to that from across the border. Prices are on much the same level, with the outlook for a continuation of this condition for some time. Most wholesalers are of the opinion that we may look for a steady run of business for some months, but they deprecate any attempt to put up prices to such an extent as will curtail the demand.

A Quebec manufacturer states that his costs this season have risen to a considerable extent and that the cut will have to fetch better prices than last year if he is to see a profit. While the open weather admitted of active camp operations, the small snowfall in the Eastern townships is interfering with hauling in that district.

The hardwood market is looking up. Orders are good with quotations on the up-grade. Very little is doing in B. C. forest products. For the time being, the demand has dropped away.

The activity in building in Montreal during the past year is illustrated by the permit figures just issued. These do not tell the whole story, as they do not include the suburbs, where a very large amount of construction has been carried out; for instance in Outremont the value was \$2,750,000. and in Verdun \$1,378,285. The total for Montreal for the year was \$21,132,586., a decrease of \$726,332. Beginning with April the monthly records amounted to over two million dollars until October, in which month and also in November, the total was about one million and three quarters. In December the permits showed the large total of \$2,011,940. It is estimated by the head of the city building inspection department that about \$9,000,000. were spent in the construction of dwellings.

The fall in the value of pulpwood as compared with about a year ago is shown by the latest export figures. During November the exports totalled 64,652 cords, valued at \$650,974., compared with 49,476 cords valued at \$614,974. in November 1921. For the eight months of the fiscal year the exports were 664,067 cords, of a value of \$6,873,809., comparing with 518,067 cords and \$6,749,433. in the corresponding eight months.

## Ottawa Reports Prices Stiffening in Better Grades

A further advance ranging from one to ten dollars per M. marked the Ottawa lumber market during the first part of the year. Coupled with it was an increase in orders from American yards and also an increase in the number of inquiries received.

The new year to all appearances, with the exception of many embargoes at points in the U. S. started out right for the lumberman. The advance in prices affected nearly twenty staple manufacturers' grades of white pine. The heaviest advance was in good strips and good shorts which went up from five to ten dollars per thousand feet. The increased demand from American yards and the general lowness of stocks, it was stated, were the principal factors for the advance. No. 2 cuts 2 x 8 and up good sidings, also took a jump of \$10 per M. on manufacturers' quotations.

In all other grades the market remained absolutely firm and it was stated in several circles that further price advances might be looked for. Several firms reported that orders during the first part of the year were coming in freely from American yards and that there had been a great number of inquiries. Such a condition, the local trade believed, showed that the American yards were depleted of stocks and were seeking to replenish for the spring trade. The chief demand was for the better grade stock.

Regarding future prices, the correspondent of the "Canada Lumberman" was informed that it was generally known that prices were to be advanced by the manufacturers. Stocks in the hands of the manufacturers at present are fairly low and the majority of the stocks in the manufacturers' yards are controlled by wholesalers.

Another gratifying feature of the first two weeks of the year was the reports of several woodcamps showing that operations were well under way and the prospects of a large cut were good. The weather so far has been very favorable to lumbering operations, though in some districts a little more snow would help some.

The supply of woods' labor was reported to be adequate, but there was no overplus. There were, however, few reports of an existing shortage of labor in the camps.

In the transportation arena shippers raised loud complaint and in language not usually heard in Sunday School condemned embar-

goes on American entry points, which repeatedly held up shipments calling for immediate delivery.

On one date, every entry point into the eastern states by which a local firm wished to ship was tied up one hundred per cent with embargoes. The embargoes have now mitigated against the export of stocks from the Ottawa Valley to the U. S. for the last two months, and there is no means of telling when the present condition will be remedied. The placing of embargoes, it is generally believed, is due to the movement of shipments of grain and coal. Foreign cars were fairly plentiful.

Conditions with the woodworking factories remained unchanged some of them being down for repairs and others of them operating on a very limited scale, or manufacturing stock.

During the second week of the year the action of the Provincial Attorney General and the Golden Lake Lumber Co., which forms part of the O'Brien interests against Jno. R. Booth Ltd., commenced before Justice Middleton at the Court house. The action is to settle the principle as to what shall establish certain limit lines in the Nipissing district. W. N. Tilley, K. C. acted as Chief counsel for J. R. Booth Ltd., and Mr. I. F. Hellmuth, K. C., for the Golden Lake Lumber Co.

## St. John Interests Suffer Owing to Embargoes

The last two weeks have seen very little lumber moving to the American market from St. John and nearby sections, largely caused by the embargo set against New Brunswick firms by the New Haven Railroad, and until this condition changes, very little will be shipped. Certainly the Boston & Maine and New Haven Railways are in an awful shape and the American nation should awaken to its responsibilities and take some real practical active interest in these roads and force the hands of the executives to do something better towards putting the systems in shape to haul the traffic handed over to any of them. Many times does it seem as if these roads do everything in their power to operate as carelessly as possible. Embargoes on lumber are as certain as the rainy days and come oftener. The worst feature about this condition is that it affects the Eastern provinces more than any other railway embargoes could do as they feed New England and New York and the surrounding territory, which is crying out for lumber. No immediate relief is in sight and, in the meantime, lumber, which was sold long ago, is ready for shipment. As usual, when the American purchasers cannot get delivery, they cancel their purchases, having no compunction even though it is the fault of their own countrymen, so that to-day the Eastern provincial manufacturers realize just where they stand and have no intention of placing themselves in the same condition as in the past.

A good deal of the rotary stocks being sawn this winter is finding its way to the British and Irish markets through St. John and Halifax. Prices remain steady in these markets, especially for Irish deals and scantlings, and the feeling seems to be gaining that January will see improved buying of 1923 cuts, for as yet the British importers have not made any forward purchases for 1923, evidently preferring to await just what remains to be seen.

At the present time there is no reason for any operators to become panicky as the old stocks and also 1922 stocks are extremely low. The heavy snow, which has now fallen all over New Brunswick, will slow up the operations very much and must cut many millions from the aggregate for next year's sawing. All these things place the manufacturer of lumber in a better position than for many years past.

An impression seems to be abroad, both in the English and American markets, that the manufacturers of lumber are asking prices for their product for the coming season which will give them excessive profits. It is claimed that manufacturers are trying to recoup the losses made at one sweep. This is positively not so and unless the manufacturer is protected with a fair profit and helped back to independence, the buyer and the brokers will certainly be looking for goods with none to be found. All the risks have been taken by the manufacturer from log to sawn lumber, and at this date he cannot go ahead unless assured of a fair profit, and it is only a fair profit which he is asking. Logging costs have certainly been heavier than anticipated, wages have increased and the prices of supplies have also gone up, so that few operators will be able to produce logs at the price figured on.

All that can be said of the past year in its final analysis is that

View of Mills in Sarnia.

# BUY THE BEST

Retailers and woodworking establishments who like to get A1 NORWAY and WHITE PINE LUMBER always buy their stocks from us because we can ship them on quick notice. It pays to have the goods, but it pays better to "deliver" them.

We also make a specialty of heavy timbers cut to order any length up to 60 feet from Pine or B. C. Fir.

*"Rush Orders Rushed"*

## Cleveland-Sarnia Sawmills Co., Limited

SARNIA, ONTARIO

B. P. BOLE, Pres.   F. H. GOFF, Vice-Pres.   E. C. BARRE, Gen. Mgr.   W. A. SAURWEIN, Ass't. Mgr.

it has been a house-cleaning year, a year of paying debts, turning all the assets that were able to be liquidated into money which in turn was given to the banks to reduce loans. Many operators as yet are heavily in debt with large interest accounts to carry. Others have been able to pay up, so when all is said and done, operators are now happier but poorer financially and going forward with the hope of better times, and they are slowly coming.

Operating costs must be kept down, speculation must be eliminated and the lumber business will certainly go forward to better times. Other commodities may be reduced in price but with the timberlands of this country, both American and Canadian, held by government and corporations, no reduction in stumpage can be looked for; in fact the prices of stumpages will, no doubt, be steady and higher. Operating costs will not be reduced and stocks are low everywhere. If business is only fair, a normal demand will be created and profitable prices will be obtained.

Not as many logs have been put up as was anticipated, as a late start was made. Men also left the operations for Christmas and have stayed away longer than usual. The class of workmen is not as good as formerly, so taken all around, the reduction will be, at least, 10% below anticipation.

### Quebec Exporters Expect Big American Demand

In a general talk with the lumber trade interests the Quebec correspondent of the "Canada Lumberman" has come to the conclusion that, while there is a feeling of more optimism in the minds of the Quebec limit holders and exporters in regard to the demand in 1923 from the United Kingdom, they are not placing the dependence on such a demand, but on the business in prospect with the Canadian and United States markets.

There is no question but that the stocks are very light in Canada which accounts for increased operations this winter in the cutting of logs sufficient to meet all requirements in spruce and pine to supply the needs of Canada as well as the United States and the United Kingdom. Over fifty per cent. of the cut in logging, however, will go into the manufacture of pulp and paper.

The conservative-thinking lumbermen of Quebec and district of Quebec are disinclined to believe that lumber should further increase in price this coming year of 1923. They are of the opinion that should it go up, as is desired by a large section of the trade, it would have the effect of stopping building. Of course, it is admitted that wood cannot be sold for the same price obtained in 1920 and 1921, which netted no profit, but there is a feeling that if the quotations were to ascend much higher than they are at present, the investor in building would stop the operations he has at present in mind. This is a matter that will be fully and seriously discussed at the meeting of the lumbermen to be held at Montreal during the closing week of January.

The advices received by the Quebec export firms up to Christmas from their British agents, report that the business in the first week of December was quiet and uneventful in the timber trade, that the market was very sensitive and that buyers, finding it easy to procure what they wanted from the Scandinavian sellers, had become suspicious of prices and were making purchases on a small scale, and that the feeling of confidence noticeable in October, had ceased to prevail. Importers were not pushing the sale of their stocks and had become patient until a demand would warrant an advance in their quotations. The trade returns for November were not as good as had been hoped and go to show that expectations for the future must be considered in moderation.

It is the general belief of the British agents for Quebec firms that the prospects of a growing trade in the United Kingdom for 1923 are good, but everything will depend upon prices, and should there be any material increase in the value of wood, the prospects may be spoiled before they become realities. The London Building Guild has overcome its financial difficulties, which had greatly retarded progress in structural operations, and arrangements have been made to allow the Guild to continue functioning on delayed existing contracts, which will have a good effect. The United Kingdom railroads are getting ready to carry on vast repairs, likewise the docks at the various British ports, which will call for lumber and give employment to brighten the situation. In this regard the Canadian trade will have to consider the Finnish and Swedish competition, and later the Russian sale of its forest products, and unless the steamship companies come down in the ocean freight rates, Canadian lumber exporters will continue to be handicapped.

In regard to the steamship companies and their high freight rates on Canadian lumber, these concerns seem to remain obdurate in their determination to make no favorable concessions to the Canadian shipping trade interests, notwithstanding that the cost of operation and overhead charges on all ships have been considerably reduced. Discussing this question with W. Gerard Power, president of the Quebec firm of W. & J. Sharples, Limited, who recently

returned from England, he said while it was quite true that the companies, have refused to come down in their ocean rates on Canadian freight, he is of the opinion that they will be forced to make a reduction or operate their ships with very little Canadian cargo from Canadian ports to Great Britain ports. He said that he expected to see an automatic reduction in freight rates, the same as exists in passenger traffic.

With all these facts in mind the Canadian lumber trade is advised by the Quebec interests to place more dependence on the home and American markets. Every Quebec firm is fully booked with orders from the United States, which they are unable to fill owing to the embargo against Canadian freight on the American lines. The difficulty does not now rest with a shortage of cars. There is at present, and was during the entire month of December, an ample supply of railway freight cars to move all shipments of Canadian wood from the mills to the U.S. purchasers, and the same can be said of pulpwood ordered from the district of Quebec by American paper mills, which is held up by the embargo against Canadian freight movement. It is thought in Quebec that this embargo is due to the congestion of the American lines by the movement of coal and Canadian wheat which has the preference from the Canadian West and deviated to the American seaports for export shipment.

Quebec lumbermen with their limit holdings and mill interests, are extremely sanguine of a big business with the United States market this coming spring and summer. Besides the present order bookings, they have every encouragement from their American agents, which has caused them to feel independent of the United Kingdom situation for the year 1923 unless they receive prices for their wood that will yield them a profit. It is in keeping with these optimistic prospects in a demand for lumber and paper, which has inspired the large operations in progress in the woods this winter, the biggest logging cut within the past ten years, as well as to replenish the stocks in their yards which have become almost depleted.

### Production in Ontario Will be Very Large

General market conditions in the lumber line are still rather quiet as retailers have been busy taking inventories. The holiday season is now about over, with members of the staffs of different concerns holding conferences and canvassing the outlook for next year.

It is generally agreed that prospects are much brighter for a larger turnover in 1923 than they have been for some months. Prices are remaining firm, logging production is much larger, stocks are lower and badly broken in the better grades and wider widths, and the building boom is likely to continue in the larger centres. January generally is a seasonably peaceful period and not many sales are made. There is, however, a good undertone of feeling and a basic confidence which engenders the belief that 1923 should be a year that, in every respect, will be large in volume. It is felt that prices will strengthen in several woods until the new cut comes on the market. No one, however, wants to see runaway quotations or any decided shortage because the resultant reaction is more basic than one generally supposes.

So far as the demand for western stock is concerned, this is rather quiet at present and some of the mills are out of the market for a short time owing to stocks being very low, and other B.C. plants closing down for repairs. Shingles have increased slightly and will likely get stronger as spring approaches.

In the meantime, a large number of wholesalers and manufacturers are preparing to attend the annual convention of the Canadian Lumbermen's Association which will be held in Montreal on January 24th and 25th. Retailers will go to the Ontario Retail Lumber Dealers' gathering which will convene in Windsor, Ont., on the same dates. Some regret that they will not be able to be present at both assemblies owing to the conflicting dates and the intervening distance. However, it is expected that confidences will be freely exchanged and the trade prospects thoroughly gone into for the coming year.

Prices of spruce are strengthening all the while and it is reported that the cut in the East will be the largest ever known. There are more inquiries for stocks of various kinds of lumber just now than there have been for some weeks. This is regarded as an indication that trade will begin to move much earlier than usual, that the volume will be heavier and prices firm.

Automobile concerns are now buying considerable quantities of hardwoods for bodies. Just how great will be the furniture industry will not be known until after the exhibitions which are being held in Stratford, Kitchener and Toronto during the present month. The producers will be meeting dealers from all parts of Canada, and a better line up of this business can be obtained toward the end of January than at the time of writing. In the meantime, all quotations are holding their own although hardwood men say that the

## For Logging Small Timber Stands at a Profit

*The "Caterpillar's" \* field of usefulness is by no means limited to Logging. There is a "Caterpillar" \* of size and capacity for every power need. On farm or ranch, in the mining and oil industries, for building and maintaining roads, removing snow and doing other civic work — wherever tractive power and endurance are at a premium, the "Caterpillar" \* has no real competitor*

**CATERPILLAR**  
TRADE MARK

**HOLT**

The Northern "Caterpillar" \* Logger provides the equivalent of a logging railroad. It also gives access to the scattered outlying tracts of timber too small to justify the expense of putting in a railroad. It does its own swamping and hauls over snow roads with the same pronounced success as on ice roads. With "Caterpillars" \*, jobbers and loggers of small stands can profit by the same economies gained by the big lumber and pulpwood manufacturers using large fleets of these dependable, all-purpose tractors.

Extremely powerful, yet compact in build, the Northern "Caterpillar" \* Logger is easy to operate both on and off the road. It turns in its own length and will work continuously in the most

severe winter weather. After a big snowfall, it quickly plows through the drifts and gets logging traffic moving. The three-speed transmission of the "Caterpillar" \* enables it to climb steep grades and to travel at high speeds when hauling on level roads or making return trips.

Whether used for swamping out roads, skidding logs, spotting and fetching out sleighs, or hauling trains, no other method is so practical and so economical as the "Caterpillar" \* method. Our motion pictures, exhibited on request, show the Northern "Caterpillar" \* Logger at work in the woods. We maintain complete stocks of spare parts. Write today for descriptive catalog.

*\*There is but one "Caterpillar" —Holt builds it*

**CANADIAN HOLT COMPANY, Limited**

*Holt branches and service stations all over the world*

low ends of birch and maple are far too cheap and should be commanding more money.

One manufacturer stated this week that retailers have not been passing on the price to the public the same as they should and had been trying to beat down millmen so that there was no actual money in selling stock at the figure offered which did not cover operating expenses in some cases. He contended that in the lumber arena to-day the manufacturer of hardwoods was the fellow who was making the least profit and working the hardest for his returns.

On the whole, however, while complaints are heard here and there about certain features of the trade, the embargoes at various points are being removed and also the scarcity of cars. Shipments are now going forth to the other side in larger quantities than has been the case for several weeks. Some Ontario firms are also thinking seriously of looking into the export business but any decisive step in that direction will have to be determined after the result of the present European conference is known.

### Mr Bick Speaks of Overseas Markets

Mr. S. Bick, who was formerly with the Bennett Lumber Company, Limited, has returned to Canada after being in the Baltic States for about a year. He is now on a business trip to the United States.

In an interview with a representative of the "Canada Lumberman" Mr. Bick gave some interesting details as to the Baltic lumber trade and the competition of wood from those states with Canadian wood in the U. K. markets. He resided in Riga for several months, establishing a business of exporting Baltic woods to the European Continent. The chief market is England, but Belgium and France take large quantities. Prior to the war about 250,000 standards per annum were shipped from Riga. The chief woods are white wood

S. Bick, Montreal, P.Q.

and red wood, which correspond especially to Canadian spruce and pine. The lumber business from the Baltic is growing. Riga and the Latvian ports shipped last year about 40,000 standards and this year the output will be about 100,000 standards. Riga, Revel, Memel and Dantoig play a prominent part in the export of wood, the last named being the outlet for the Polish Check. Slovaki and Lithuanian lumber. The port of Dantoig last year shipped in the neighborhood of 100,000 standards and will undoubtedly continually increase this in 1923.

"While the white wood coming from the Baltic States is similar in texture and quality to Canadian spruce it has an advantage in the specifications for length and widths. It is very easy for Baltic shippers to make deals 16 and 17 feet average and these are practically no scantlings. Seven inches is the narrowest size in 3 in. thickness. The chief competition with Canadian lumber comes from the Baltic, both as to size and price. Baltic shippers can sell 3 x 7 and 3 x 8 at £15 10s. per standard c.i.f. English ports and make a good profit, which wood is being used for exactly the same purposes as Canadian spruce. In my opinion Canadian exporters cannot possibly sell at this price as it would mean that these sizes would net about 25 dollars free on board vessel or about twenty dollars f.o.b. mill. The same observation applies to 9 and 11 inches, which are about £3 higher than the 7 and 8 inches. Baltic shippers have also the ad-

vantage of lower ocean freight rates and are able to produce much cheaper than Canadian mills owing to the cheapness of labor and the low rate of exchange.

"Conditions in the U. K. are gradually improving and the market is absorbing all the stock the Baltic States can supply; in fact I could have sold ten times as much as I was able to secure. The result is a stiffening of prices in the Baltic States and if the Canadian ocean rates, (which are today £2 higher than from Baltic ports) could be reduced and the Canadian mills could see their way to sell on a lower basis, there would be a much better chance for Canadian spruce—during the present year, because of the larger demand and firmer market on the other side. This is especially true as to demand in the North of England and Irish ports, where Canadian spruce will fetch £1 a standard more than Baltic white wood.

"Russian wood is going into England very heavily, and the production is larger each year. I do not think Archangel will be in competition with Canadian spruce as it is used chiefly for joinery work, whereas Canadian spruce is used mainly for box making and building purposes. Archangel wood will be in competition with Canadian white pine, which is used for the same purposes as the Archangel wood.

"I have just come from England where business prospects are much better than for the past three years. The demand for lumber is satisfactory, and prices are firm. If only the European situation would clear up, I am confident that the lumber industry there, could look forward to a prosperous year."

### Better Spruce Prospects for Present Year

The much firmer tendency of the market for redwood, and the effect which this is having, and is expected to have, on whitewood, is raising the hopes of Canadian shippers who anticipate a stronger demand in Great Britain next season, says the Lumber Trade Journal, of London, England. Latterly the prices for good spruce have risen, especially from Quebec deals and for 3 x 7 in. and 3 x 8 in. Although Central European whitewood may be had much cheaper, good spruce is always preferred, and provided the difference is not too great, importers will have the latter article. Moreover, a certain quantity of good whitewood is needed, and if the Scandinavian shippers succeed, as they hope to do, in advancing their prices both of redwood and whitewood, the effect will soon be felt in the spruce market. This last season the consumption of spruce in Canada itself and the export to the States enabled the producers to do pretty well, but towards the end of the season more spruce came over to Great Britain, and the market has been rather stronger. The volume of spruce imports depends so much on a comparison between the prices for spruce and those for Swedish and Finnish white that the Canadian shippers are naturally watching the European markets very closely. The high Atlantic freights have been a handicap this year, the difference between these rates and those accepted from Sweden and Finland being above the normal.

### Quebec Expects Million From Timber Sales

The development of the North Shore and the exploitation of immense timber limits is expected to result from the sale by auction of permits to cut timber on an area of 2,000 square miles, which is to take place in Quebec on January 30th. The limits affected are located in the basin of the Manicouagan River and adjoin those of the Ontario Pulp and Paper Company and the English Bay Company. The sale is likely to bring to the Government over \$1,000,000. Among the conditions are some regarding the utilization of the powers of the Outarde River, which must provide 15,000 horse power within seven years. Conditions will also be contained in the deed by which a pulp and paper mill must be erected there. This sale which is one of the largest ever held in the Province means that a decisive attempt will be made by the Government to open up that region to forestry exploitation. This sale should also compensate for the decrease in the returns of the Department of Lands and Forests for the year ending June 30th, 1922, which have been greatly affected during the past year.

### Vancouver Timber Film Shown Abroad

Many phases of the timber industry are now represented on the cinema, and one of the most interesting series we have seen is produced and shown by the Gaumont Company, Ltd., of London and Liverpool, says the Timber Trades Journal, of London, England. This is a comprehensive picture depicting the daily life of the lumberjacks in the forests of Vancouver Island. It is shown that the romantic age of the axe is past, and that the huge trees are now felled with a saw. "Snaking them out" is the local term for hauling the huge logs out of the forest by machinery and transporting them down to the river or the storage ponds at the mills.

## EDGINGS

The Macamic Pulp & Lumber Co., of Quebec, Que., recently made an assignment.

A charter has been granted to the Millwood Lumber Co., of Sault Ste Marie, with a capital stock of \$40,000.

C. T. White Co., Sussex, N. B., is making preparations for the erection of a planing mill on Main St., Moncton, N.B.

The Westminster Paper Mills, of New Westminster, of which J. J. Herb, formerly of Merritton, Ont., is the head, have started operations.

Mr. Purdie, who recently bought the E. H. Mann sawmill at Peterboro, Ont., has a camp in on Jacques Lake near Apsley, Ont, this season.

W. C. Irvin, of the Irvin Lumber Co., Toronto, and wife intend leaving shortly for St. Petersburg, Florida, where they will spend several weeks.

The Laminated Materials plant at Sapperton, B. C., was re-opened recently and the Timberland Lumber Company's mill at South Westminster, B.C., has also resumed.

Whitby recently carried a by-law to grant certain concessions to Samuel Jeffrey & Son, wholesale harness manufacturers, of Port Perry, who will remove their plant from that town to Whitby.

The Kellys, of Bridgenorth, Ont., who have long been associated with the lumber business, recently bought out the Peterboro Fuel & Transfer Co., in Peterboro, and are very busy at the present time.

D. Aitcheson & Co. Limited, Hamilton, Ont., is a new firm recently incorporated with provincial charter to manufacture and deal in all kinds of wood products. Capital \$100,000.

E. C. Poisson, Ford, Ont., formerly Mayor of that town, was defeated in the recent contest for the civic chair by Eugene Reaume. Mr. Poisson has for some years been in the retail lumber business in Ford and has built up a large trade.

The Lakefield Lumber Co., of Lakefield, Ont., (with which the late John Duignan was associated), are operating through jobbers on their limits and expect to have a larger cut than usual during the coming season at their well-equipped mill.

While operating a rotary saw in Hicks & Company's mill at Dalhousie Junction, N. B., A. Beakingham died recently. He had served overseas for three years. Beakingham's death was caused by a piece of wood flying up from the saw and striking him.

Buildings permits of \$35,244,278 aggregate value were issued by the City Architect's Department for the year 1922 in Toronto, constituting a new record. This total is \$11,366,038 greater than in 1921 and \$7,842,517 in excess of the total for the previous record year of 1912.

Mrs. Blackburn, widow of the late Robert Blackburn of the Hawkesbury Lumber Co., who was a prominent financier and lumberman of Ottawa, died recently. The remains of Mrs. Blackburn were interred in Beechwood cemetery and the obsequies largely attended.

Some time ago on account of frozen booming grounds the Canadian Western Company's plant at Fraser Mills, B. C., was forced to close down for a few days. Work, however, was resumed lately and the employees were working overtime in order to catch up with production.

There was heard in the courts at Ottawa recently a long-standing dispute regarding the boundary of timber limits in the Nipissing district, some of which are owned by the Golden Lake Lumber Co., which forms part of the M. J. O'Brien interests, against John R. Booth, of Ottawa.

Substantial additions and alterations are being made to the plant of Thurston-Flavelle, Limited, at Port Moody, B. C. It is expected that production will be increased by about 25 per cent. The old roof has been torn off and a new one put on while the mill has been widened by 24 feet.

The Summerland Lumber Co., Mineola, B.C., are preparing plans for the erection of a \$4,000 box factory at Summerland, B.C. At present the company are operating at Mineola, but will move their small plant and equipment to Summerland when the new building is completed.

F. S. Pearce, of the Pearce Company, Marmora, Ont., was in Toronto recently on business and reports that the outlook in the hardwood market is greatly improving. More inquiries are being

received and it is believed that the demand will be very steady with prices tending to strengthen considerably.

It is believed that 1923 will be the biggest shipping year in the lumber industry in British Columbia and many charters have been fixed. The Norwegian steamer "Hallgyn," was recently at New Westminster taking on a record from that district of 3,500,000 feet of lumber. She is believed to be the largest vessel that was ever up the Fraser River.

L. L. Brown, B. C. Lumber Commissioner for Eastern Canada, who has been spending several months in the Pacific Coast province on business connected with his department, arrived in Toronto recently. He reports that the outlook for the lumber industry in the West is bright and that all the mills are looking forward to a steady, growing demand from the United States and the Orient.

Among the by-laws voted upon recently in Meaford was one granting exemption of taxes for five years to the Meaford Mfg. Co., and another to guarantee bonds for \$20,000. for the Knight Mfg. Co. The first measure was carried by 111 votes but was defeated by 51 on the two-third requirements. The latter was carried by 173 votes but was defeated on a two-third vote of the property-holders by 12.

A. D. F. Campbell, of A. F. Campbell & Son, retail lumber dealers, Arnprior, Ont., was re-elected as councillor for that progressive town at the recent elections. Out of seven candidates he received the highest vote at every poll with a total margin of 66 over his next competitor. This makes Mr. Campbell's third year as a civic father. His municipal record is one that has been marked by ability and faithfulness.

The many friends of H. J. Terry, president of Terry & Gordon, Limited, Toronto, and retiring chairman of the Wholesale Lumber Dealers' Association, Inc., will sympathize with him in the death of his mother, Mrs. Edward Terry, who passed away on January 3rd in her 83rd year. The remains were interred in Mount Pleasant Cemetery. Mrs. Terry was one of the oldest and most highly respected residents of Toronto.

Many friends among the retail lumbermen will regret to learn that John Ferguson, Mayor of North Bay, Ont., for a number of years, was defeated in the recent election. Mr. Ferguson will always be held in kindly regard by the members of the O.R.L.D.A., who in 1920 took a trip up north and were splendidly welcomed by the lumbermen of that district, Mayor Ferguson was most active in entertaining the visitors during their stay in the railway town.

Ald. S. L. Lambert, retail lumberman, who for some years has been a member of the city council of Welland, Ont., was a candidate for the Mayoralty in the recent election but was defeated. He will, no doubt, come up smiling again next year for there are few men in Welland who have done as much for the material prosperity of the city as "Sam." Lambert who built a fine new hotel, opera house and other public buildings and has erected hundreds of homes to improve the beauty and attractiveness of that industrial centre.

The many friends of Frank J. Carew, of the John Carew Lumber Co., Lindsay, Ont., will congratulate him on his elevation to the position of chief magistrate of that town. He won a signal victory at the polls and during his years of service in the council has done much to advance the welfare and prosperity of Lindsay. Mr. Carew is one of the most popular young lumbermen in the province but finds opportunity to devote considerable time and talent to the up-building of the community in which he has been a life-long resident. He is a son of John Carew, ex M. L. A., Lindsay.

The contractors who are building the extension of the T. & N. O. Railway northward from Cochrane, Ont., have caught up their schedule. The contract was let during the second week in February last, and the steel is now in place for a distance of 42 miles, the full distance specified for the current year. In addition to this, about sixteen miles of the ballasting has been done. The end of 1923 is expected to find the T. & N. O. extension completed to Tin Can Portage, the new work having then covered over half the distance separating Cochrane from tidewater on James Bay.

An important announcement is made in newsprint circles which means that Price Bros. & Co., of Quebec, will triple their present product. As a result of negotiations recently concluded between the Provincial Government of Quebec and a new company organized to develop the power resources of Lake St. John and the Saguenay River, which work is already in its initial stages, it was stated at the office of the Canadian Export Paper Co., Montreal, recently that Price Bros. & Co., Limited, for whom they act as export selling distributors, will enter upon a big problem of expansion which will extend over three years. The output of newsprint from the company's present and proposed new plant will be increased from 300 tons to 900 tons daily or 280,000 tons a year. The initial work of installation is already under way, and the program calls for the production of 200 tons a day, new output by January 1924, and 200 tons additional at the beginning of each of the two succeeding years until the maximum is reached.

## Safeguard Your Mill

The surest way to safeguard your mill against fires caused by flying sparks is to muzzle your smoke stack with a

### Thompson Spark Extinguisher

Mill owners throughout the country are realizing this more and more every day. The THOMPSON SPARK EXTINGUISHER is specially designed so that the draft is not checked. It is absolutely warranted to stop all dangerous sparks. Tell us the height and diameter of your smoke stack and we will quote you on a suitably sized "Thompson."

**GEO. W. REED & CO., LIMITED Montreal**

# A Good Belt Saves Money

THE money wasted in keeping a stretching belt taut amounts to a surprising figure. If you use "Goodhue" Belts in your mill or factory you can save most of this money because "Goodhue Belts" stretch less by 15 to 25 per cent. than any other belt. They are made from skillfully selected hides with the stretch taken out of each section before it is made up into the belt.

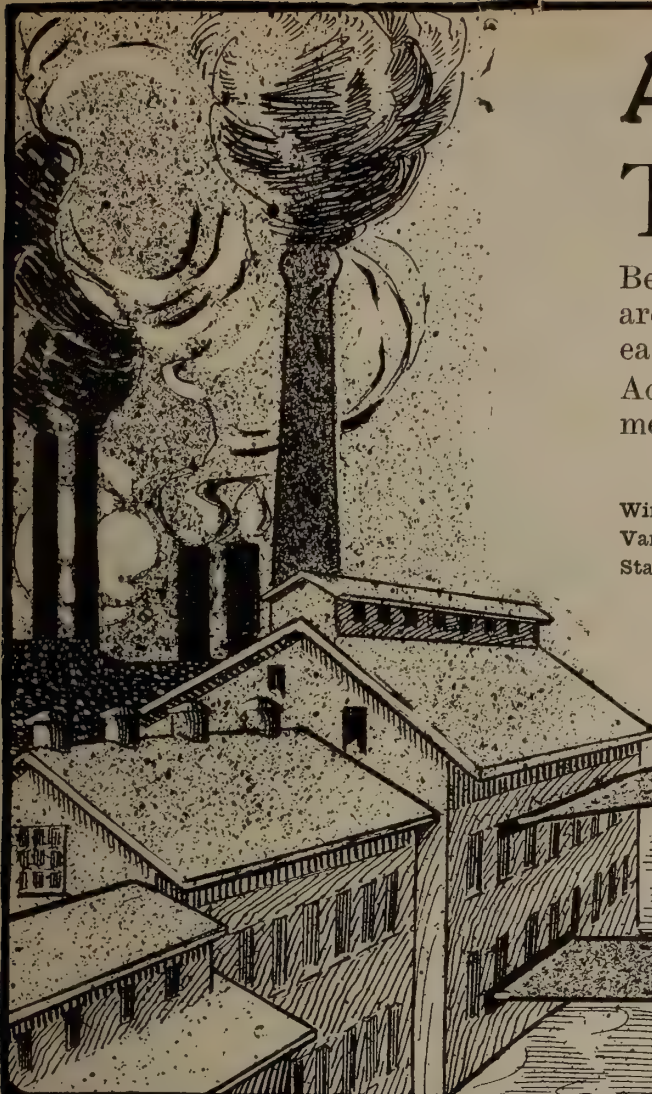

According to the conditions under which the belt is to run, we recommend "Extra," "Standard" or "Acme Waterproof" belts.

## \$1946 buys a modern new Boiler

To give you an idea of the moderate price we ask for our high grade modern Boilers, built to suit Interprovincial Codes, we advise you that a 66" x 16', 125 lb. Horizontal Return Tubular Boiler, giving 110 h.p., costs \$1946, complete with suspension harness, including columns. Size 72" x 18', 150 h.p., costs \$2423. Other sizes, larger or smaller, in proportion. The returns to you in increased steam power, in lower fuel bills, will prove that an Engineering & Machine Works boiler will be the most profitable investment you can make.

## GREENING'S WIRE ROPE

Wire Rope made in the country in which it is used is better adapted to local conditions than rope made in countries where the exact conditions of use are unknown and not understood.

Greening's Wire Rope has been made in Canada for sixty years. In this time Greening's close and exact knowledge of the Canadian field has saved users of wire rope inestimable time and expense.

This thorough knowledge and the unvarying quality of Greening products have made them the accepted Canadian standard.

## Gerlach Modern Machinery Produces Cheaper and Better

Tight and Slack Cooperage Stock for Barrels, Kegs and Tubs, ready to set up into non-leaking packages of 5 to 120 gallons liquid capacity, or for semi-liquid and dry materials up to 800 lbs. weight. We manufacture machinery for sawing, jointing, planing and crozing staves; for sawing, jointing, dowsing, planing and circling heading.

### MODERNIZE YOUR PLANT

Scrap Machinery invented before the Civil War and install a Gerlach Outfit that will make Tight Barrels that are tight, from any strong non-porous timber.

### BUILD

Barrels with perfect joints that will not leak; a product that is infinitely superior to the tin and iron near barrels now being experimented with. Wood is tasteless, stainless and rustless and being a poor conductor of heat or moisture, keeps its contents in their original condition.

## Let Him Be the Judge

*and Swift's Products will be his choice*

Old-timers in the lumber camps are keen critics of the food served and many a time have slipped away to another camp because the grub was better. Their preference for Swift's products is thus high tribute to the quality.

But the camp operator must consider other things. Supplies ordered must reach him promptly, in good condition, and without substitution. To ensure him this service, branches have been established from coast to coast, each carrying a very large stock ready for immediate shipment.

Why not take advantage of the perfect facilities offered you by the most up-to-date Packing House in Canada? One order will convince you of the superiority of Swift products and service.

# FIRE BRICK AND CLAY

We make several brands of fire brick by every known process of manufacture from a selection of various high grade Pennsylvania clays. This enables us to furnish the best for your boilers, dutch ovens, refuse burners, kilns, etc. We specialize in fire brick for power plants and if you will advise us whether your boilers are hand fired or stoker fired and kind of fuel used we can then give you the proper brick for your work.

We carry a large stock of our different brands in various sizes and shapes in our Hamilton warehouse which enables us to ship at once.

We manufacture the following well-known brands:

**"Elkco Special," "Elk Steel,"**

**"St. Marys," "Keystone" and "M.D. Elk"**

Write for copy of our catalogue,

## CLOTHING

The man in the bush needs the best clothing possible and that is the kind we strive to produce. G.H.G clothing is made by highly skilled workmen using the best quality materials only. Our **DURABIL MACKINAWs** are immensely popular with lumbermen who have worn them and we believe they set a new standard for this type of clothing.

Get our prices on Mitts, Gloves, Caps, Moccasins, Rubber Footwear, Snow shoes, Sweaters, Overalls, Bedding, etc-

## TENTS

Repeilent Brand duck tents are absolutely weather and mildew proof. They are strong, durable and comfortable—the ideal tent for those who work or play in the out-o'-doors.

Repellent Brand duck is also used in manufacturing horse covers, tarpaulins, wagon covers and wherever a durable canvas is required.

We also manufacture feather-weight silk tents and regular duck tents of double and twisted yarns.

## You need haul only 10% to 15% by weight of the milk you use in camp

ON THE haul from the railroad to camp you'll appreciate the fact that Canadian Milk Products Powdered Milk weighs only a fraction of its equivalent in liquid or prepared milk. In fact it weighs but 10% to 15% of fresh liquid milk—for it is fresh milk with all the water, which constitutes over 85% in weight, taken out.

You'll appreciate Canadian Milk Products Powdered Milk a lot more when you use it in camp. It won't freeze or sour, is easy to store and convenient to handle. And you drink it or cook with it exactly as you would fresh liquid milk.

*Samples and information gladly sent on request.*

**TRUMILK**

The Linn Logging Tractor Hauling 63½ cords of Pulpwood

# THE LINN LOGGING TRACTOR

The Canadian Logger has evidenced his appreciation of the value of the Linn Logging Tractor for log haulage.

This winter the Linn Logging Tractors will be found operating as far East as Newfoundland and as far West as the Port Arthur District, and as far North as Cobalt.

It is our hope that every Canadian Logger will this winter avail himself of the opportunity to see Linn Logging Tractors in operation during the haul.

As Linn Logging Tractors will be in operation this winter within easy reach of every locality in Ontario, Quebec and Newfoundland, any operator will be able to see a Linn Logging Tractor operation without loss of much time from his own operation.

We will gladly supply any interested operators with the name of his nearest neighbor who is using Linn Equipment.

—Logging Department—

# The Name "LONG" Is Your Guarantee on Sawmill Machinery

"Long" Sawmill Equipment has built up an enviable reputation for long and efficient service. The name has come to be synonymous in the lumber industry with all that is best in machinery. "Long" Band Mills are no exception for they combine all the latest features with exceptional strength and accessibility. The unusually heavy bed consists of one solid casting entirely surrounding the machine. All bearings are adjustable longitudinally, laterally and vertically. They are chain-oiling, water-cooled and are all the same size and interchangeable.

Quick installation is another desirable feature of the "Long" Band Mill. The columns, which are of very heavy hollow box section, and of unit construction, are mounted directly on the base casting. They are held in place by bolts and dowel pins and enclose the lifting screws and operating gears. The bottom is accurately planed. If you haven't our catalogue of mill equipment on file, you should write for it today. It will be gladly sent on request.

# SAW MILL MACHINERY

The mill superintendent who recommends WATEROUS equipment, to his chief, can always justify his choice. In its first day of service, or at the end of 20 years, the operating records of "WATEROUS" equipment will prove the soundness of his judgment.

Measured by board feet produced in years of working life the ability of this equipment to give better results at lower maintenance cost, is the final standard of mill equipment performance.

Only, in other WATEROUS machines will you find equal efficiency and economy, for WATEROUS efficiency is the product of test design

selected materials and expert manufacture, for WATEROUS methods of manufacture and design are based on over three-quarters of a century's manufacturing experience.

During this time WATEROUS engineers have made exhaustive studies of our machines under actual working conditions, and have incorporated in the designs of each machine, all changes that have been found necessary for greater efficiency and economy, so that in every piece of WATEROUS equipment you instal you are taking advantage of these years of study of the sawmill requirements of Canada.

## There's Real Economy in Arrow Head Saws

MADE  
IN  
CANADA

The use of Arrow Head Saws represents real economy because their quality and manufacture ensure perfect satisfaction at all times.

Arrow Head Saws are made of the highest grade Vanadium Steel, carefully treated to facilitate cutting and lengthen their life. We also make a full line of wood-cutting saws.

Prices and full information upon request.

### The Handiest Lumber Truck Ever Made

Just what you need for the lumber yard—a TUDHOPE-ANDERSON DETACHABLE LUMBER TRUCK. Note these features: The wide-tired steel wheels cannot come off whether going forward or back. Axles (13/4") are high quality square steel. Tires are 4 1/2" wide. If wheel spokes become bent or broken they can be replaced—an exclusive feature of Tudhope-Anderson trucks. Wood parts are best oak, air seasoned and kiln dried, well ironed and strongly braced.

### Quantity Production Lowers Manufacturing Costs

The demand for a medium priced—high-class motor boat has resulted in GIDLEYFORD sales far in excess of expectations. The Gidley organization is able to concentrate on quantity production on an unheard of scale, with the logical result—lower production costs.

This enables us to sell the GIDLEYFORD at a greatly reduced price, and we will maintain the quality that is represented by the combined names of Gidley and Ford.

GIDLEYFORDS will be allocated as orders are received and shipping dates arranged.

Price reduced to \$1250. F.O.B. rail or water, Penetang, Ontario. In Canada, Sales Tax extra.

**1923 Price—\$1250**

# "Hamilton" Steam Tension Band Mill

(Single or Double Cutting)

## SPECIAL FEATURES OF THIS BAND MILL

- 1—Tension on saws maintained by steam—quickest and most sensitive form of tension yet devised.
- 2—Top wheel supported both above and below mandrel.
- 3—Extra large mandrel bearings top and bottom.
- 4—Top wheel has 12-inch range of adjustment.
- 5—Unbreakable upper saw guide raised and lowered by steam—first used on our machine.
- 6—Both top and bottom wheels instantly aligned by screw adjustment.
- 7—Operating mechanism is rapid and power driven.
- 8—Takes saws 12 inches to 14 inches wide.
- 9—Extra heavy, rigid, strong and accurately built throughout.
- 10—Built by expert workmen in a plant that has been manufacturing high grade saw-mill machinery for over sixty years.

## The Peak of Perfection

Hocken White Pine  
is manufactured in modern mills by the most highly skilled workmen we can obtain. It is specially selected from the smaller logs which are free from black knots or other large defects. Before shipment, it is rigidly, and generously, graded. In fact, from the standing timber to the finished product everything in our power is done to ensure the highest degree of satisfaction on the part of the merchant. That is why you frequently hear Hocken White Pine spoken of as "the peak of perfection."

Prompt Shipment.  
Attractive Prices.

# Service Counts Too!

It's often easier for a merchant to obtain "quality" and "price" than it is for him to get "service." When he obtains all three, the transaction is perfect.

Fesserton has all the facilities for getting the goods to the merchant "when and how."

Try us for Pine, Hemlock, Spruce, Shingles, Lath and B.C. Forest Products, Straight or mixed carloads.

We also handle the well known

**"TEN-TEST" SOLID FIBRE BOARD****A Permanent Lumber  
Service**

**A**FTER several years of inactivity we are now cutting on our modern fully equipped mills at Manistique and Little Lake, Upper Michigan. The timber behind these mills was purchased many years ago by the Stack interests from the then "unlimited" supply. Its quality, particularly the maple and birch, is the envy of northern mill men among whom this tract is famous.

This timber will run the mills to full capacity for fifteen to twenty years. The 40,000,000 feet annual cut will run:

15,000,000 ft. maple annually  
6,000,000 ft. birch annually  
2,500,000 ft. beech annually  
2,500,000 ft. elm annually  
900,000 ft. basswood annually  
200,000 ft. ash annually  
6,000,000 ft. hemlock annually  
3,000,000 ft. white pine annually

the balance in Spruce and Tamarack.

Our exceptional service, grades, and manufacture will be maintained.

"Low freight rate shipments by water to Toronto, Montreal, Owen Sound, Port Arthur, and other Great Lakes and St. Lawrence River Ports. Conveniently located also for rail shipments to inland points by C.P.R. or Soo line."

We will be pleased to hear from old friends and from new ones who can understand and appreciate what permanent connection with such a source of supply would mean.

# BUY BRITISH COLUMBIA Red Cedar Shingles

The life of a British Columbia Red Cedar Shingle Roof can almost be gauged by the life of the nail with which the shingle is nailed in place. Judging from available data, the average life of the ordinary steel wire nail, which has been in such common use, is only from seven to twelve years. Some wire nails will last longer, depending upon the condition of exposure, climate and similar features, but considering our climate as a whole, at the end of from seven to twelve years a large percentage of wire nails will have rusted either completely through or so extensively that the first strong wind will complete the work. The shingles that have been held in position by such nails are then free to work down, permitting rains or melting snows to leak through and damage the interior of the structure. Examination will disclose that the fibre of the shingle itself is still in perfect condition, and a leaky roof, in the majority of occasions is due entirely to the use of faulty nails, but the average home owner, placed at such inconvenience, will not stop to reason this out and the poor wooden shingle comes in for more unjust abuse.

There are several kinds of nails which experience has proven will give lasting satisfaction, and the wise dealer will advise his customers of these satisfactory nails. A pure zinc shingle nail meets all the demands of durability required. Its principal drawback is its high cost and a slight tendency to bend under careless driving. Galvanized wire nails theoretically are rust proof, and if the galvanized coating is properly applied, and of sufficient thickness, such a nail will last as long as the shingle it holds in place. The life of this shingle roof, properly applied with these nails then is from 40 to 50 years. Pure iron nails, or the old cut or wrought nails are ideal but difficult to secure. Copper nails also constitute a perfect shingle nail.

Red Cedar Shingles**

In these days of keen competition, **QUALITY TELLS**, and so far as Lumber is concerned we believe we can safely say we can furnish **QUALITY** combined with the **BEST OF SERVICE**.

At the present time we have a considerable quantity of

# 1" No. 1 Common Cedar

This is particularly desirable stock, being a **SMALL-KNOTTED** type and will make excellent Boards and Shiplap, also a good cheap Siding or Ceiling. Try a car and we feel sure you will be surprised at its superiority.

We also manufacture **FIR** and **Spruce**. As **DIMENSION**, our **FIR** be can strongly recommended, and **GOLDEN SPRUCE** already has a string of steady users in Eastern Canada.

Our sawmill, with a daily 10-hour cutting capacity of 200,000 feet, is the largest in the interior of British Columbia. We run all orders through the planing mill at time of shipment so that our stock always reaches to you bright, clean and newly milled.

## Ask the Man Who Has Used It

The proof of the value of wood is in the service obtained therefrom.

Lumber dealers and their customers are getting to like BRITISH COLUMBIA WESTERN HEMLOCK better the more they deal in it or use it.

It is not a hardwood but is possessed of a grain that is externally beautiful. It takes a high polish, is free from pitch and "shakes" and possesses great strength.

Don't wait until all your competitors have established a reputation for handling BRITISH COLUMBIA WESTERN HEMLOCK.

We'll be glad to send you BRITISH COLUMBIA WESTERN HEMLOCK in mixed carloads along with our other BIG CHIEF Brand Specialties, British Columbia Red Cedar Shingles, and Cedar and Fir lumber in all sizes known to high-class manufacture.

SINGLE TABLE

The "Clark" Horizontal Resaw

This picture shows a rear view of the "Clark" single table Horizontal Resaw.

Some of the special features are—The method of returning stock through machine, eliminating expensive return system—The use of the lower part of saw blade, this means the resaw sets on mill floor where every part is accessible.

Entire table twenty-four feet long raises and lowers—Elimination of sawdust around wheels as all dust and bark passes through frame to conveyor below. Hand or Steam Setworks—Range of thicknesses from  $\frac{1}{2}$  in. to 14 in., made in two sizes 66 to 84 inches. Many other special features are described in our Resaw catalogue. Mailed on request. ## Annual Convention of Canadian Lumbermen Was the Greatest Ever Held

*Many Important Matters Considered in Open Session—Angus McLean Elected President for Coming Year and Buffalo Selected for Next Gathering—Membership Fees Increased and Many New Firms Join—Trade Outlook Reviewed and Bright Prospects Arouse Interest—Lumbermen Contend Freight Rates are Still Excessive and Call for Reduction—Montreal Members Provide Splendid Entertainment*

Representative in attendance, enthusiastic in character and fruitful in achievement was the fifteenth annual gathering of the Canadian Lumbermen's Association which was held at the magnificent Mount Royal Hotel, Montreal, on Wednesday and Thursday January 24th and 25th.

Buffalo, N.Y., was selected as the convention centre for 1924, a hearty invitation being received from representative commercial and lumber bodies to assemble there.

Angus McLean, of Bathurst, N.B., who last year was one of the vice-presidents of the C.L.A., will, during the coming twelve months, guide the destinies of this deliberative and outstanding federation of lumbermen. The number of delegates broke all precedents and the yearly conclave of the forest products men of the Dominion was from every standpoint, legislative, creative, financial and social, a distinct success and remarkable record in the history of this nationally named and internationally recognized organization.

The new officers and directors elected for the coming year are:—

Hon. President, J. R. Booth, Ottawa.  
President, Angus McLean (Bathurst Co., Ltd.) Bathurst, N. B.

First Vice-Pres., George W. Grier (G. A. Grier & Sons, Ltd.) Montreal, Que.

Angus McLean, Bathurst, N.B.  
Newly Elected President of C.L.A.

Second Vice-Pres., David Champoux (Chaleurs Bay Mills) Restigouche, Que.  
Hon. Treas., R. G. Cameron, Ottawa.  
Secretary, Frank Hawkins, Ottawa.  
Manager, Transportation, R. L. Sargent, Ottawa.

Newly-elected Directors to serve three years:—

From Ontario,—Walter M. Ross, (J. R. Booth, Ltd.); W. J. Bell (Spanish River Lumber Co., Ltd.) Sudbury; W. C. Laidlaw (R. Laidlaw Lumber Co., Ltd.) Toronto.

From Quebec,—Arthur H. Campbell, (Campbell, McLaurin Lumber Co., Ltd.) Montreal; J. S. Bock (Eagle Lumber Co., Ltd.) Montreal.

From New Brunswick,—W. B. Snowball (J.B. Snowball Co., Ltd.) Chatham.

From Nova Scotia,—Rufus E. Dickie, Stewiacke.

The full Board of Directors of the Canadian Lumbermen's Association now consists of A. E. Clark, Toronto; Gordon C. Edwards, Ottawa; W. E. Bigwood, Toronto; W. Gerard Power, Quebec; Angus McLean, Bathurst, N.B.; Spencer Kellogg, Utica, N.Y.; R. E. Stocking, New York; Dan. McLachlin, Arnprior, Ont.; R. E. Bremner, Ottawa; David Champoux, Restigouche; George W. Grier, Montreal; Brig. Gen. J. B. White, Montreal; J.

Fraser Gregory, St. John; E. C. Knight, Vancouver; W. J. Bell, Sudbury; Arthur H. Campbell, Montreal; W. B. Snowball; Chatham, N.B.; Rufus E. Dickie, Stewiacke, N.S.; R. G. Cameron, Ottawa; Walter C. Laidlaw, Toronto; Walter M. Ross, Ottawa; J. S. Bock, Montreal.

### Next Convention Meets in Buffalo

It was decided that the next annual gathering would be in Buffalo, N.Y. M. F. Preisch, of the Haines Lumber Co., North Tonawanda, N.Y., and former president of the National Wholesale Lumber Dealers' Association, presented a strong invitation, on behalf of the Buffalo Chamber of Commerce, the Buffalo Lumber Exchange and the White Pine Association, of North Tonawanda, N.Y., for the Canadian lumber parliament to assemble in the Bison City in January 1924. The greetings from these institutions were of the most cordial nature, and it was pointed out that the Canadian Lumbermen's Association was international in character, having a large membership on the other side of the line.

At the 1922 session in Toronto the C.L.A. in honor of its American friends and the support they had always given the Association, elected two directors from over the border in the persons of Spencer Kellogg, of Chas. C. Kellogg & Sons Co., Utica, N.Y., and R. E. Stocking, of Power, Moir

George W. Grier, Montreal,  
Newly Elected First Vice-President

David Champoux, Restigouche, Que.  
Newly Elected Second Vice-President

& Stocking, Inc., New York City. Both of these gentlemen and a large number of guests from Buffalo, Philadelphia, New York, Boston, Rochester, Detroit and other points were in attendance at the Montreal convention.

Among the visitors of note were Frank F. Fish, secy-treas. of the National Hard-

W. B. Snowball, Chatham, N.B.  
Re-elected Director

wood Lumber Association, Chicago, and Ben. C. Currie, of Philadelphia, vice-president of that organization, and W. W. Schupner, of New York, secretary of the National Wholesale Lumber Dealers Association and many others. The national lumber bodies of America have paid a compliment to Canada in the past in electing Canadian directors on their boards, and this courtesy has been reciprocated, as already stated, by the Canadian Lumbermen's Association. Now the latter body has, out of respect and appreciation to its many friends and members in the United States, unanimously decided to foregather in Buffalo, N.Y., a year from now. Mr. Preisch presented the invitation in a neat speech, and President Clark warmly thanked him for the kindly tone of the messages which he conveyed.

The hospitality of the Montreal lumbermen was unbounded and the entertainment provided was on a scale that won hearty approval on all sides. The Men's Luncheon in the La Salle Doree, of the

Mount Royal Hotel, on Wednesday at noon, was attended by about 400 lumbermen, while the grand ball in the banquet hall on the same evening attracted about 700 guests. There was ample provision made for the ladies from shopping tours to tobogganing, including sleigh drives and theatre parties. George W. Grier and Brig.-Gen. White were joint chairmen of the Entertainment Committee. They were ably assisted by members of the Wholesale Lumber Dealers' Association, of Montreal, and the Montreal Lumbermen's Association.

#### Membership and Fees Increase

Another important matter was that the membership of the C.L.A. has increased to over 200, several joining during the session. It was decided to raise the annual fee to \$80.00, which will include all services in each department. Heretofore the subscription fee has been \$50.00 with an additional levy of \$20.00, for the service of the transportation branch. A proposal to make the fee \$100.00 was not carried, and the recommendation of the directors that the figure be \$80.00 was adopted by a large majority.

Many important resolutions were carried on a number of practical topics, relating to the weal and progress of the industry. These will be found in another column of the "Canada Lumberman" and

Arthur H. Campbell, Montreal  
Re-elected Director

present in succinct shape the result of the two days' deliberations at the Mount Royal Hotel, which was crowded from the main foyer to the top storey; V. G. Cardy, manager of the hotel and his staff extending a cordial welcome to all.

This year's conclave of the Canadian Lumbermen's Association was attended by over 500 delegates, including ladies, and the proceedings passed off pleasantly and profitably under the able guidance of president A. E. Clark, of Toronto. The formal agenda in the shape of reports, statements, etc., was quickly disposed of and the afternoon session of the first day, Wednesday January 24th, and the whole of Thursday January 25th were given over to timely and terse discussions on trade conditions, market outlook, export situation, forest conservation, woods activities, freight rates, workmen's compensation act, extension of trade and other topics. At no time did the discussion lag and the talks were pithy and comprehensive.

The keynote of the whole convention

was one of optimism and encouragement. A warning signal was hoisted by all the speakers against a runaway market, such as characterized the lumber trade in the early part of 1920. It was emphasized that the aftermath was too drastic and prolonged to desire a repetition of such an experience. A good, fair profit and stabil-

Rufus E. Dickie, Stewiacke, N.B.  
Re-elected Director

ization of the market were the sentiments heard on all sides, together with a desire for greater economy in management and operation and higher efficiency in service and distribution.

All the speeches were of a broad, tolerant character and evidenced no thought of profiteering by reason of a shortage in any line of forest products. They demonstrated that, by co-operation of interest and unity of effort on the part of all branches of the industry, 1923 might show earnings that were honest and square. On all sides the call went out against the creation of speculative, inflated or an artificial state of affairs. Wholesalers and manufacturers believe that 1923 should be a year of normal demand and steady turnover.

There were other outstanding features of the convention, including greetings from Sir Keith Price, a widely known timber merchant of London, England, who, while admitting that the European situation was alarming, still said that trade conditions were getting better in the Old Country and merchants were more cheerful.

# Some Important Resolutions Adopted

## Freight Rates Still too High

Whereas the railroads in both the United States and Canada are still being managed in an expensive and costly manner with ~~practically no reduction being made in their operating costs~~, and whereas this condition makes it necessary for the railways to continue charging high freight rates to cover these excessive costs, and whereas practically all industries producing and manufacturing the goods being transported and paying these high freight rates have succeeded in greatly reducing their costs of production and are giving the consumer the benefit on these reductions, and whereas many of these industries are obliged because of competition to sell their products with little or no profit owing to the high cost of railway delivery.

Be it resolved, that we, Canadian Lumbermen, in convention, do instruct the officers of our Association to use due diligence and employ all lawful means to impress upon the proper authorities the necessity of having our railways reduce their operating costs so that freight rates in Canada can be restored to the basis in existence September 1920. And further, that we, as individuals trading through or with American firms and shipping to the United States, do our utmost through these connections to bring about the same changes on the American railways so that our international traffic can be handled more cheaply.

## Workmen's Compensation Has Many Defects

Whereas Workmen's Compensation for industrial accidents has become a prohibitive charge on industry and, as at present constituted, is fundamentally unsound, and whereas this is due mainly to four causes,—

Charging full amount of accident to the year in which accident occurred, when payments in permanent disability and death cases are payable in from one to twenty years:

Paying of all medical fees by the Board, advantage of which is taken by some unscrupulous doctors to encourage malingering by the workmen;

The absence of the fundamental principle of contribution by the beneficiaries;

The injection of class representation into the personnel of the administrative Boards.

Be it resolved, that the Canadian Lumbermen's Association, in annual meeting, place its opinion on record that amendments should be made to the Workmen's Compensation Acts in such provinces where its act is administered by administrative boards, correcting these defects so that the act may be made just and workable; and further; resolved that where inexcusable fault is proved on part of the employee, the employer be not held responsible providing the employer has used his due diligence in providing all the necessary safeguards to protect employees.

## Promoting Trade Within the Empire

Whereas the Canadian Lumbermen's Association is greatly interested in promoting trade within the Empire, believing that commerce is one of the great cementing bonds and interpreters of mutual necessities and interests, and whereas the forest products of Canada are a large factor in such trade and commerce, particularly within the United Kingdom, it is the sense of this Convention that all due consideration be given to the matter of publicity and information that will promote a full understanding by the timber trade and public generally within the United Kingdom of the local and governing conditions in Canada as affecting the timber trade; and whereas the impression seems to be justified that the various timber trade journals of the United Kingdom do not especially feature trade news, facts and commentaries in respect to traffic and interest in Canadian woods in the United Kingdom; and whereas the reports in the same journals of trade operations and conditions in Canada are on the whole meagre and uninforming.

Be it resolved that this Convention being desirous of accomplishing the largest possible measure of trade intercourse within the Empire, appeals to the timber trade papers

of the United Kingdom to give sympathetic intention to the collection in the United Kingdom of all trade news, of value; to especially give effect to a policy of actively featuring and emphasizing the use of Canadian woods and to promote a more comprehensive correspondence with interested parties in Canada that conditions here may be fully reported; also, that this Association through its officers will do everything in its power to supplement such efforts and to co-operate to the desired result; that the secretary be instructed to send a copy of this resolution to the "Timber Trade Journals" 8-11 Paternoster Row, London, E.C. "Timber," 133 Middlesex St. London, E.I., "Timber News" 84 Leadenhall St. London, E.C. 3, and to any other publications which in his judgment may be interested.

## Membership Fees are Increased

Whereas it is expedient, in order to give the members a satisfactory service that the income of the Association should be sufficient to pay the necessary operating costs, and whereas the financial statement for the year 1922 shows that the revenue was not sufficient to do this, and there is no good purpose served in regarding the Transportation Department as a separate entity from the Canadian Lumbermen's Association.

Be it resolved that instead of the subscription fee being \$50.00 only, plus an amount additional towards the maintenance of the Transportation Department, the annual subscription should be made \$80.00 which will include all services in each department except in the case of the checking of freight bills for which a further charge may be made based upon the nature of the service performed.

## Lumbermen Endorse Use of Oleomargarine

Whereas oleomargarine is a "Canada Approved" food and is healthful, nutritious and palatable, and whereas oleomargarine is manufactured daily and sold fresh is a sweet wholesome and economical food, and our experience proves that oleomargarine has excellent keeping qualities and is suitable for our purposes, and whereas the British Government recently made a thorough deietetic revision of the menu for the British Army and Navy and prescribed oleomargarine as the official spread for the bread.

Be it resolved that the Board of Directors of the Canadian Lumbermen's Association respectfully and earnestly urges the Right Honorable, the Prime Minister and members of the Dominion Government to enact permanent legislation pertaining to the manufacture and sale of oleomargarine in the Dominion of Canada so that the Canadian people will not be deprived of a healthful and nutritious food which is at present manufactured under the Inspection of the Dominion Government.

## The Investigation of Roof Coverings

Having heard the report of the Executive Committee in connection with the Special Committee, consisting of three Montreal professional men, of which Prof. H. M. MacKay is chairman, appointed by the Dominion Government for the purpose of conducting a series of tests on roof coverings of all kinds.

Be it resolved that the Canadian Lumbermen's Association urge upon the Dominion Government at the coming session of parliament to provide in the estimates a sum sufficient to enable the Special Committee appointed for the purpose of conducting a series of tests and investigating the subject of roof coverings. And be it further resolved that copies of this resolution be mailed to the Right Hon. W. L. Mackenzie King, Prime Minister.

Resolutions were also carried, thanking the members of the Montreal lumber trade for their hospitality; the manager and staff of the Mount Royal Hotel for the able manner in which the delegates were looked after and also to the Buffalo Chamber of Commerce and the Buffalo Lumber Exchange for their invitation to meet in that city in 1924; to the trade and daily newspaper press for full reports given the proceedings; to President Clark for the capable manner in which he presided, and to the Canadian Pacific and Canadian National Railways for the service given.

# President Clark Reviews Association Work

A. E. Clark, Toronto, Ont.  
Retiring President of C.L.A.

President A. E. Clark, of Toronto, in his annual address covered several points of interest and importance. His remarks which were well received were as follows: Members of the Canadian Lumbermen's Association and visiting lumbermen of Canada and United States,—it affords me great pleasure to welcome you in such numbers to our Annual Convention. It is, indeed, gratifying to see such a large registration and to see numbered among them so many of our friends from the U.S.A. We feel our Association is rapidly assuming an international character. Whether we can claim all credit to our Association for the large attendance or whether Montreal's many attractions have been an added charm, at any rate we welcome you and

hope that you will attend all of our sessions in goodly numbers and with profit to yourselves. It is a source of pleasure to your board that in the New Mount Royal Hotel you find the last word in modern hotel equipment, lending every facility to perfect entertainment and enjoyment. The programme of social entertainment offered us by the Montreal Lumber Trade should leave nothing to be desired either by the ladies or the gentlemen and I am sure that when you have partaken of all these social feasts you will all feel, as I already well know, that Montreal lumbermen are royal hosts. Our programme for the different sessions of this Convention differs materially from previous conventions and may almost be called unique. I sincerely hope you will join freely and heartily in full discussions at all these sessions and assure our Convention's success.

As your presiding officer for the past year, I simply wish to review very briefly, the work of the Association for this term. Two years ago your board decided upon opening up a Transportation Department. The preliminary work necessary to the establishment of this Department was completed and the bureau in May 1921, under the management of Mr. R. L. Sargent. The report to be presented today in no way sets forth all the accomplishments of this Department. Mr. Sargent has been a hard working, painstaking, efficient officer in his efforts in your behalf. During the past year and a half he has been constantly before the Railway Commission and the Government seeking reductions in the excessive rates charged on lumber movements and has had some measure of success.

## Making Political Issue of Freight Rates

I honestly believe that had the present Government not lifted these questions out of the hands of the Railway Commission and thrown them to some considerable extent into the political field, we lumbermen of Canada would long before this, have received our deserved reductions in freight rates. Mr. Sargent has been successful in assisting the Eastern lumbermen to adjust many of their difficulties with the Railway Companies. His efforts, in assisting all of us during the trying times of last few months in fighting embargoes and car shortages, are I am sure appreciated, and I know that the programme he is working on at the present time, when carried to its successful issue, will cause you to have still further praise for his work. To those of our members who cannot yet see the advantage of the Transportation Department, may I say there can be but one cause—you are not using it. Our Association now enjoys the confidence of the Railway officials and we can work together in ironing out many of our troubles. I believe we will soon be at the happy place where we will have no occasion to call in the Railway Commission in settling our differences except in some extreme matters.

## Suggests Graduated Membership Fees

During the trying times of the past two years, we have more than held our own in membership. The Association, however, is more or less restricted in its facilities for carrying on a complete work through its lack of finances. Our membership is not nearly what it should be. We have a great proportion of the large operators and wholesalers but there are vast numbers who do not belong. This Association is working for the general benefit of all lumbermen

and should have the support of all. I believe we should endeavor to secure every lumberman be his business large or small, as a member. The necessity may arise for the introduction of graduated membership fees which I know is a hard problem to work out. Nevertheless, the lumbermen of this country must stand united for their own self preservation. As it now stands we are attacked in our legitimate trade by the introduction of all kinds of foolish substitutes for our materials. Shingle camouflages, insurance attacks, Government attacks and still we stand apart. I make a plea for a larger Association with greater fields of usefulness and activities. Let us get the start to this end during this meeting.

During the war and ever since, nearly every business institution has been legislated to death. The committee in charge of legislation has been ably assisted by our hard working secretary, Mr. Frank Hawkins, and truly Associations are seldom blest with more efficient officers than we have on our staff. The report of this Committee will not be voluminous, although they have had a great deal of provincial and federal legislation to watch and endeavor to check. In my own district, the Province of Ontario, some of our men in Government seats have sought to achieve political fame by prosecutions and persecution of the lumbermen.

## Censures Course of Ontario Government

It is the duty of this Association to assist and protect every one of its members who conducts his business in an honest and upright manner. We, as lumbermen, have always prided ourselves on belonging to an industry which did in the early days much of the pioneer work of this fair Dominion and which is still one of the greatest labor distributing industries of the Dominion. We, therefore, feel that it ill becomes members of the Ontario Government to seek political gain through trying to defame men in this industry, injuring their credit with our financial institutions and slowing up one of Ontario's finest and largest industries. It were better far were they to work in conjunction with the men who are seeking to market our vast wealth, and continue to keep our Province in the foreground of the lumber industry. I am glad to say that in the other provinces the crown officers have worked with us to the mutual benefit of the government and the lumbermen of the different provinces.

Early in 1920 the lumber industry, along with nearly all other industries, suffered severe reverses. Not until late on in 1922 did we again begin to see fair weather ahead. During this two year period, we have suffered some business casualties but on the whole the lumber industry has stood up well under the terrible financial depression. The year 1923 looms up before us with the brightest prospects we have had to face for many a day. Of course, we have not a completely clear sky but I honestly believe the exercise of good business judgment should bring every lumberman through this next year with a nice margin on the right side of the ledger.

## No Boom Year But Good Business

I cannot see a boom year. Canada and the United States are both very much interested in agriculture and have just harvested a wonderful crop. The farmer is one of our biggest customers but, unfortunately, he is not receiving an adequate return for his products and, not having money, cannot proceed as rapidly as we could hope. We are also naturally large exporters of lumber. The European situations are not yet such that we can view these peoples as immediate large buyers of our goods. We have every reason to hope that the export trade to the United States will be large and any little fancied tariff differences can be easily straightened out by our statesmen.

Many people question us on matters which take us back to pre-war conditions. Those, who are interested in lumbering realize the futility of trying to put the business back on a pre-war basis. I do not know of any industry which has made greater effort through trimming sail, cleaning house, reducing inventories and overhead, to get his business down on a sane businesslike level. However, we have also uncontrollable charges. We cannot overcome the terrible burdens of sales taxes, exorbitant stamp taxes, receipt taxes and federal and local income taxes. Our profits are acquired from large volume turnovers and these taxes strike very heavily as a result. It has always been the desire of operating lumbermen to have their men well cared for.

## Workmen's Compensation Cost Too Great

The methods of administering our Workmen's Compensation Acts in most of the Provinces have gotten to the point where they are a serious burden to the lumbermen and should, where they are

handling such vast sums of money, have more attention from our different Provincial Governments, as lumbermen feel the cost is far greater under Government operation than were these matters left in our own hands. Rumor now speaks of a new tax in the form of Unemployment Insurance, which has already proven to be a most iniquitous tax in Great Britain. Our Association, gentlemen, having done its own housecleaning, should now, through its members, advise the Governments that the war is over and that we should like a little sane legislation, a little less reckless expenditure of money and that our business is groaning under its burden of taxation.

During the past fall season the cost of manufacturing has again mounted high owing to our labor shortages. Canada is now seriously in need of a good sane immigration policy which will secure for us an influx of good citizens. If we do not get a materially in-

creased population we cannot hope to hold our place in the exporting field.

It will be the duty of our Legislation Committee, during the coming year, to follow an important bill through the house—the Revision of the Banking Act. Lumbermen are large users of bank credit and it is to our interest to see that a sane measure of protection is given these banking institutions. Fool resolutions and suggestions are not wanted but sane business judgment should be exercised.

I sincerely hope that I have not taken up too much of your time in this summary of past and future activities of the Association. Our session following this morning's session will be given up entirely to discussions by the members and we will welcome discussion, criticisms and suggestions from all.

## Executive Committee Outlines Its Activities

Frank Hawkins, Ottawa,  
Secretary C.L.A.

This report was presented and in part was as follows:

As everybody will no doubt be fully aware, the United States Government, through Mr. Secretary Hoover, has made considerable progress in connection with this matter so far as the United States is concerned. It would seem to be proper to suggest that this question should receive very careful consideration and discussion during your deliberations today and to-morrow. It should be pointed out, however, that this standardization is not merely being applied in the United States to lumber but a number of other industries, namely, paving brick, beds, mattresses and springs, and metal lath have all been the subject of standardization either by Secretary Hoover's division of simplified practice, or otherwise.

Attention is drawn to the fact that the North Eastern Retail Lumbermen's Association has quoted a resolution urging that Canadian manufacturers get together and join in the general plan of establishing "Uniform grading rules and a thorough system of lumber inspection similar to that offered by the American Associations of Lumber Manufacturers." In order that a discussion may be heard upon this matter, it is suggested that some member offer a resolution and submit same to the Resolution Committee immediately so that the matter may be dealt with.

**OLEOMARGARINE.**—The efforts of your Executive have been devoted to keeping this product available for use in lumber camps. We have had considerable correspondence and interviews with the experts in the packing industry with a view to having legislation introduced whereby the manufacture, sale and importation of oleomargarine may be legally continued.

**WOOD SHINGLES.**—Our secretary was instructed to attend a meeting which was called October 27th, 1922, by Prof. H. W. Mackay, chairman of the Special Committee, appointed by the Dominion Government to investigate and report upon roof coverings of all kinds. The purpose of the meeting was to get the views as to the advisability of using the Chicago Board of Tests or otherwise going to the expense of erecting a test plant in Canada for this purpose. Our Secretary in conjunction with Mr. A. Edward Roberts, British Columbia Lumber Commissioner, 51 Yonge St., Toronto, vigorously opposed the former proposition, and we understood that the tests will all be made by the Special Committee in Canada. It will be some considerable length of time before the Report of this Committee can be made, but in the meantime it is urged upon you that all building codes should be very carefully scrutinized. We are led to suggest this as the State of California passed an Act, which is known by the short name of "State Housing Act," under the provisions of which, buried in an innocent clause, wooden shingles were absolutely prohibited from being used in that State. The shingle interests got after the matter and spent thousands of dollars in a campaign, and a vote was taken in November, 1922, when the objectionable Legislative Act was snowed under to the extent of five to one. The officers cannot watch legislation all over the Dominion, and we therefore appeal to you to pay particular attention to this matter and report at

once to our Secretary anything which you feel to be designed to curtail or prohibit the use of wooden shingles. We are indebted to Mr. A. J. Russel of the Sante Fe Lumber Co., San Francisco, Calif., for sending us full details in connection with the California Act. Mr. F. H. Lamar, Secretary-Manager of The Shingle Manufacturers' Association of British Columbia stated that possibly Mr. Loren L. Brown and Mr. A. Edward Roberts will be in attendance at this Convention.

**LABOR AND UNEMPLOYMENT CONFERENCE.**—After some reference to Labor and the Unemployment Conference at Ottawa in September last, it was pointed out that during the whole proceedings there was not one word said about any employer or representative of an employer. The report of the Executive set forth the fact that it would seem from this that the Dominion and Provincial Governments have only the extreme and insistent views of organized labor to consider. While the conference was called for the purpose of discussing unemployment in the Dominion, the presentations on behalf of organized labor went far beyond the advertised scope of the conference. The report stated that Tom. Moore, president of the Trades and Labor Congress of Canada, presented a statement that:—"It is not claimed that it is the duty of Governments to paternalistically provide every man and woman with the necessities of life, but every healthy man and woman should be provided with a full opportunity of employment at wages which would enable them to maintain a proper standard of living, and if private enterprise fails in this respect, then it does become the duty of our Governments to see that none are compelled to either starve or become paupers."

Another statement was also reproduced from Mr. Moore as follows.—"Unemployment insurance should be immediately instituted to take care of those unable to find employment or those who through the reduction of hours have not sufficient income to maintain a fair standard of living. Unemployment should be a first charge on industry and a State Unemployment Insurance Fund obtained by assessments on industry in a similar manner to that adopted with Provincial Compensation Funds. Unemployment insurance to be administered by the Federal Government."

and further,—"The release of our natural resources held out of use for speculation by private interests and their fullest development. In this respect scientific and industrial research to discover commercial uses for many articles today considered commercially valueless should be encouraged."

The Committee quoted from the 1911 census of Canada showing the great importance of the lumber industry and the capital invested in timber, lumber and re-manufacturers thereof, and concluded as follows:—

Timber and lumber and re-manufacturers thereof stand second in value in the list, being exceeded only by the value of food products.

With proper organization, therefore, there is no reason why the timber and lumber trades of the country should not be a determining factor in the future of this Dominion. It is for the members here assembled to decide what the course shall be."

**SALES TAX.**—There have been no changes to report during the year 1922, but November 21st we issued a circular letter asking for an expression of opinion with regard to the question as to whether the wholesaler pays the whole tax.

**STAMPS ON CHECKS.**—On the 6th of June our President addressed a letter to the Prime Minister, which was in part.

"After discussing the question of the attaching of tax stamps to cheques, which, under the recent legislation was introduced into the house, before this principle becomes law, we wish to place on record our distinct opposition to the proposed enactment."

## Export Outlook Looks Brighter

W. Gerard Power, Quebec,  
Former President of C.L.A.

During the second day of the Canadian Lumbermen's Association convention in Montreal the time was largely given up to a discussion of trade conditions at home and abroad "The Export of Timber" was the subject dealt with by W. Gerard Power, of Quebec, a former President of the C.L.A. He traced the development of the business from the days of the square sticks of pine, when, in order to reduce waste, waney pine came to the front, down to the production and shipment of deals from Quebec and other ports. Mr. Power, who stated that he had returned recently from a trip overseas, remarked that it was difficult to say what the future of the trade would be in the United Kingdom and Europe. As far as the United Kingdom was concerned

things were somewhat better but the political situation on the Continent was far from being reassuring. "The export trade" continued the speaker, "is not as large as in the old days. The American market is taking more and more of our material and I do not think our export business will ever be as big as it was. Conditions are changing and I figure in time that practically all lumber produced here will go to the United States. I noticed when abroad that the Swedish and Finnish lumber, which comes into England, is very carefully manufactured and graded. This is most important and we have been too careless in our production. All stock shipped from Canada to the U. K. has to be resawn over there and, if our lumber is too thin or too narrow, there is bound to be a loss. As all our material from the Dominion has to be resawn it is highly important that the manufacture and grading should be more carefully attended to. Russian competition will sooner or later come in but, if the things I have pointed out are observed, we should be able to hold our own and if we do, we can keep both English and American markets going." Mr. Power went on to speak of some peculiar situations abroad and added that large shipments from Canada was hopeless unless work was created over there to turn the stock into money, and keep things on the move. It was not good for the lumber industry in this country if we were going to have a runaway market. Producers should get more for their lumber than they had during the last few years but, if prices ran riot, and out of reason, there would be a set-back and Canadians would be left with a heavy stock on their hands. In closing, Mr. Power again counselled against anything like runaway values if the best interests of the timber trade were to be preserved.

### Lessened Production of Eastern Spruce

W. E. Golding, of St. John, N. B., said that conditions in Nova Scotia and New Brunswick were good today. The British Government stock of seven hundred million feet in the Maritime Provinces had been cleaned up, which had a most important effect in the trade. Operations in Nova Scotia over a period of years had averaged an annual cut of four hundred million feet and this year the cut would be about one hundred million feet. The average cut over a period of years in New Brunswick was seven hundred million feet and this season would be around four hundred million feet. Recent heavy snow storms had made it difficult for eastern men to operate and the damage through the ravages of the bud worm, had been far reaching in its effect. This pest had killed a vast amount of timber, and lumbermen were not going to get the quantities from Nova Scotia and New Brunswick that they had in former years. Spruce was not reproducing as rapidly today as it was being cut. The present ocean freight rates were also a handicap and should be reduced. The prospects in Ireland were for a fair market as there was a demand for timber in the Emerald Isle. Concluding, Mr. Golding said, "We are enjoying a better trade in Great Britain than we have had. We are on a higher level of prices than pre-war quotations but, in my opinion, we cannot figure on much higher values for our product than we are getting to-day as Sweden, Finland, Poland and Russia will always be factors in our future overseas trade."

Angus McLean, of Bathurst, N. B., said that he believed it was a good thing to keep in touch with both the American and English markets. If Canadians were to continue to send material to the

United Kingdom, they would have to pay more attention to the proper manufacture and curing of their lumber and more supervision should also be given in seeing that it was shipped in good condition. There would always be a demand for a portion of our Canadian spruce in the Old Country but it should be turned out in such a shape that when re-manufactured, there would be no trouble, loss or waste. There would necessarily be competition from European countries and the Canadian product had to be brought up to perfection if Canadians wished to retain their present connection with the overseas trade.

### An English Visitor on the Outlook

Sir Keith Price, of Price & Pierce, Limited, timber merchants, London, Eng., who was a visitor at the convention, was invited by President Clark to say something on the European situation. He remarked that there was grave concern regarding political affairs on the Continent; in Great Britain they were looking for a good trade. The shipbuilding business was looking up, building was fair and things generally were better. Sir Keith said their own sales had considerably increased during the last few months and were considerably ahead of a year ago. It was impossible to tell how political affairs in Europe with such chaos in Turkey and Russia and the French advance in the Ruhr would result. Another war might be on the cards which would send lumber quotations sky-rocketing. Prices were strengthening and exchange was going up. The whole timber business bristled with difficulties. The speaker said that, personally, he looked for a better consumption in England but operators there were not prepared to undertake large obligations until the political situation settled down. The Irish outlook was doubtful. Stocks there were low and were in need of replenishing. In the past Sir Keith said that his firm had been large buyers of Canadian spruce and hoped to be so again in the future. He warmly thanked the Canadian lumbermen for the opportunity of speaking a few words and addressing such a representative body. This closed the discussion on the export situation and problems.

During the afternoon the question of freight rates came up for consideration and a resolution was adopted calling for a reduction as soon as possible. The text of the presentation, will be found in another column under the heading of "Resolutions."

Angus McLean, in moving the motion, said that manufacturers had to dress their stock down to the smallest possible proportion in order to lessen the high cost of carriage. The excessive charges for transportation worked a hardship on the small producer who was not able to keep up an expensive equipment to re-saw and dress his lumber. When asked for a reduction in rates, the stock argument of the carriers was that expenses are so high they could not afford to make any decrease. As a lumberman, Mr. McLean said that he felt, unless they were continually working with this end in view, they would never get the rates down. They should keep up the agitation for a lower cost of transportation of their product and not rest until they had attained the desired ends.

## Making and Marketing White Pine

A. C. Manbert, of the Canadian General Lumber Co., Toronto, said that he had been invited to speak as "a wholesaler" on the white pine situation. He humorously remarked that the wholesaler seemed to be "the underdog today," which brought forth cries of "No" "No." After relating a number of amusing anecdotes, which put every one in good fettle, Mr. Manbert proceeded to a more serious consideration of the subject in hand. He asked if white pine enjoyed any peculiar advantage today over other woods? The present situation in the lumber market was somewhat paradoxical, in that no one could tell how long times were going to be good, and it would not be well to speculate too much on the outcome. Were we coming near the end of a period of development and demand or approaching a new and expanding era in the lumber arena? There were many conflicting phases and conditions, both on this side of the water and overseas,

A. C. Manbert, Toronto, Ont.

which affected the whole world outlook. There were two important factors to be considered, which might be termed the psychic and the physical, both of which were closely related. We had not yet reached a stable condition of mind where we were able to arrive at fixed, definite convictions and appraisals which we could act upon and apply in our daily undertakings. Rather, were we feeling our way, not yet knowing what really constituted a stabilized state of affairs. During 1923 the lumbermen should adopt a policy in their business of bringing things back to a normal, sane, conservative basis rather than in putting forth an effort to push up prices. Their energies should also be directed in effecting much-needed economies in management and methods. The welfare of the individual compelled us all to fight for what we get but it was well that, in the complexity of things, we did not get a wrong outlook and false perspective and thus lose the poise and balance of the whole situation. Mr. Manbert stressed the point that lumbermen should eliminate wasteful methods and practice economy and efficiency in operation and distribution, for as lumbermen, they had not yet struck the hundred per cent mark. All should realize the necessity along this line whether manufacturer, wholesaler or retailer. New conditions were at hand and the possibility of large profits did not exist. He en-

joined upon his hearers the urgency of co-operation, caution and discretion; the employment and exercise of the best brains and judgment to bring about a high standard of efficiency and service and the application of the best ideas and ideals. The lumbermen should not depend on luck or opportunity and the present offered every avenue for care, prudence, integrity and fidelity which were absolutely essential in meeting the adjustments and the new situation confronting us to-day.

W. R. King, of Barrie, Ont., said that the lumbermen should keep a level head in business as no one desired to see a runaway market so far as prices were concerned. Such a condition only tended to lower efficiency in operation and brought with it many other dangers. He was pleased that the Association had endorsed the production of oleomargarine. It was an article which the lumbermen used to economic advantage in the camps and gave satisfaction all around.

M. F. Preisch, of North Tonawanda, N. Y., advised that the cost of production be kept down in the interests of economy and efficiency of the industry. He endorsed the sentiments which had been put forth by the previous speakers.

## No Runaway Market Desired on Canadian Spruce

"Spruce" was the subject introduced by Anguh McLean, of Bathurst, N. B., in a general discussion on this leading specie of Eastern timber. Mr. McLean said that spruce was the dominant feature to-day over a large area of the forested lands of Canada, and particularly did this apply to Quebec and New Brunswick where this wood is preponderant, not only in quantity but also in value. Continuing, Mr. McLean said:—"Besides it is the tree that seems destined to hold its ground and continue to be the prevailing specie for all time to come. Of this wood there is about thirty varieties but the white and black spruce are the varieties that seem best adapted for our northern country. In many sections the tree grows spontaneously and rapidly and needs no artificial assistance but simply protection from the ravages of fire, and nature will do whatever else is required to restock our forests and give us a perpetual supply of this wood. A few years ago the spruce tree was considered of little value, largely because people did not understand properly how to use it.

"Besides new uses for the wood have come into being that were not thought of a short time ago. The lumber from this tree is now used very extensively in the building trade for studding, joisting and boarding as well as being a favorite wood for making concrete forms. It is also largely used in manufacturing wooden boxes and is especially well adapted for this trade on account of its lightness, strength and good nailing qualities.

"But it is no doubt more valuable for pulp and paper production than for any other purpose and it excels all other woods in respect of this industry. The finest grades of writing paper and newsprints are being made from its fibre and no other wood known can produce such kraft pulp and paper as can and is being made from the spruce tree. In fact there does not appear to be any other softwood tree that can be used for such a variety of purposes and it is quite possible that we have not yet discovered all the useful purposes it can be turned to. The production of artificial silk is one article now being made from this wood and this industry is yet only in its infancy why even the budworm is now joining in the parade and taking its toll, as we have found to our cost. However, this phase of the question I am not going to deal with here.

"As to the quality of this wood growing in our forests, there seem to be a great difference of opinion. When we consider the large area under production and the ease with which it can be produced, as well as the rapid growth it makes, opinions are bound to be at variance, and every judge, of course, considers the problem from conditions that prevail in his own locality and conditions as to rapidity of growth and productivity vary greatly in the different sections of our country. So far as the Maritime Provinces are concerned, they should be able, rightly managed, to produce this tree in perpetuity.

"I would recommend for your discussion the following problems so that we may get as much light as possible while we have so many members and visitors present from all over our land, men who are vitally interested in the questions of our forests and our future supply of timber.

"At present rate of consumption how long is our spruce timber going to last?

"What can be done to conserve and increase reproduction?

"What other specie, if any, have we that can be utilized as a substitute?"

### Mr. Dickie Against Runaway Market

Rufus E. Dickie, of Stewiacke, N.S., said that the lumbermen of his province had been suffering from deflation in prices the same as operators in other provinces, and during the past year only a small cut had been taken out, in comparison with previous productions. This season they had hoped in his province to get a cut of two hundred million feet but owing to heavy snow storms and labor difficulties, the output would not be more than half this amount. Nova Scotia tried to get out as many English sizes as possible. Canadian products hardly met the particular British market and the main export would be to the United States. For overseas trade the sticks should be made square and the manufacturing done much better than it was. In Nova Scotia, they were cutting a lot of small stock, the narrower sizes of which went to the American side and the seven inch and wider to English importers. Mr. Dickie added that he did not want to see runaway quotations and the lumbermen in the east would be content with a fair return on their labor and investment. A steady basis of prices was what was desired. The pulp and paper companies were buying up spruce lands and two large Nova Scotia properties had been recently acquired by American interests and were being held for future operation. The timber cut in the province was getting smaller. The bud-worm had done wide-spread damage to standing trees in New Brunswick but not to such a great extent in Nova Scotia. If we get the lumber industry on a proper selling basis we are very hopeful of the future" concluded Mr. Dickie.

### Canadians Should get More for Spruce

Spencer Kellogg, of Utica, N.Y., said that his firm was an old established one having been in business since 1827. They were wholesalers, manufacturers and retailers. Every lumber man was entitled to a good, fair, honest profit and did not want an exorbitant price for his goods. Canadian spruce had been sold in the United States market during 1922 at a ruinous figure. It had been disposed of in central New York state for a dollar less than hemlock which had been brought in from Pennsylvania and spruce was worth considerably more than hemlock. This was not a sound state of affairs since spruce was more valuable. Canadian producers were entitled to a higher price for their product and he would like to see them get it as far as their spruce was concerned. He urged conservative practices on the part of the lumbermen and advised strongly against speculative values.

David Champoux of Restigouche, Que., spoke in the interest of forest conservation and protecting the sources of future supply which was constantly getting smaller. Conservation was a most important question. He thought the C.L.A. was not going far enough in assisting subsidiary organizations in safeguarding our natural heritage. The provincial governments should stop giving away valuable forest tracts to alleged settlers who exploited the wood at big profits and then abandoned the land which could be sold at a good figure and the revenue used to help new settlers in suitable agricultural districts.

### Mr. Snowball Says Keep the Fires Out

W. B. Snowball of Chatham, N. B., in referring to the query of

Mr. McLean relating to how long spruce was going to last at the present rate of consumption, said that so far as New Brunswick was concerned, he thought, with proper conservation and with the fires kept out, it would continue to reproduce itself. In Nova Scotia, where in 1882 he had taken a job as a boy, the amount cut was about seventy million feet annually. It was then predicted that the supply would be exhausted in a few years and the cut could not be kept up. Today the province was cutting one hundred million feet a year and by conservation and eliminating conflagrations, he believed there was ample supply for the future with the natural reproduction of the specie. He thought the settler should be located near churches and schools and not so far back from civilization. The settler should be kept out of the virgin forest.

Concluding Mr. Snowball said, "We have immense growths of hardwoods in New Brunswick which have not yet been exploited but, with the aid of the tractor, improved roads and modern hauling

and logging appliances, these woods can be brought out for manufacturing purposes. I entertain a hopeful outlook for the future but we want a sane, far seeing government, who will make it a business to maintain and preserve our forest growth rather than encourage the settler to come in who merely spits on his hands and shoves back the timber."

#### Too Many Christmas Trees Exported

J. Fraser Gregory, of St. John, N. B., said that export of Christmas trees from the eastern provinces by hundreds of thousands was becoming alarming. They would become more valuable if left to grow and a greater revenue would eventually be derived from them by the people instead of cutting and sending the young trees out of the country. All liked Christmas trees but substitutes could be found and it would be more profitable all around if the immature spruce timber was not cut and taken away for Yule-tide decorations. Personally, he felt very keenly on this point.

## How Hardwood Lumbermen Size up Production

Frank Kent, Toronto, Ont.

The discussion on the various kinds of lumber, their production, market demand and trend of prices was concluded at the Canadian Lumbermen's Association convention in Montreal by a consideration of the whole hardwood situation. The conference on the question was opened by Frank Kent, of the Seaman, Kent Co., Limited, of Toronto, manufacturers of hardwood flooring, who spoke of the fluctuations in hardwood prices as compared with those which prevailed for softwoods. The former was a more seasonable product and subject to more varying conditions, and demand. In the manufacture of hardwoods there was too much carelessness witnessed today, especially on the part of the small operator. He believed that there

would be a larger output of hardwoods than anticipated and particularly from the farmers who were taking out considerable quantities this season. Much has been said respecting the English market but he thought that it was coming back. The question of inspection was a very important one to which too much attention could not be given. Mr. Kent favored a stabilized market and consistent prices and the question was, could we maintain it?

James Keenan, of Owen Sound, Ont., said the spread in prices between No. 1 common and the low ends was altogether too great and yet the latter had to bear its proportion of the cost of production. In softwoods, the manufacturer could sell 99% of his product and knew where he was at, in setting the market price. Conditions were much more stable in softwoods and the demand steadier. Softwoods also yielded a better average figure. In hardwoods, it was impossible to get anything like a fair quotation for the low grades and a market had to be developed for the product. Mr. Keenan thought that we were not going to have in the future any cheap lumber in the better grades. The expenses of the manufacturer were constantly advancing. Overhead costs, selling, wages, operation, Workmen's Compensation Act, etc., were all ascending and the producer was not getting the profit today that he should in view of rising costs and the amount of money invested in the industry.

#### Mr. Clark Reviews Some Conditinos

President A. E. Clark, of Toronto, referred to several phases of the hardwood situation which were frequently overlooked. All the cut that could be turned out in Canada was comparatively small and had very little effect on prices. As for any Northern hardwoods, these could be substituted by Southern hardwoods of which great quantities were produced. The average yield per acre in Canada was about 1,500 feet of hardwoods while, in the South, from 3,000 to 4,000 feet were secured from each acre. Operations could be conducted for only a few months every year in the Dominion while in the South logging was practically an all the year round industry. In the Western and other states, transportation facilities are also better by reason of the large number of branch railway lines. If the

supply was short in Canada, in six weeks the South could produce enough to meet the deficiency. They were much greater producers than we were and largely regulated the price situation. In view of these circumstances it was a mistake to advance unduly the price of hardwoods or take advantage of any existing shortage which could soon be overcome owing to the reasons already outlined.

There were certain manufacturing features in connection with hardwoods which should be carefully considered, especially by the small producers who supplied in the Dominion about 90% of the entire cut. Greater attention to manufacture should be given by the small mill-men but, judging by the nature of the product he did not know whether to call them lumbermen or not. They should remember that they could not turn out hardwood with the same equipment as the softwood man as the process of cutting was slower and more solid installations were required in the mills. Practically all Northern hardwoods were turned out in 10, 12, 14 and 16 foot lengths, the latter two of which were the most saleable. The market called for more 14 and 16 foot lengths than it did for 10 and 12 foot lengths and yet some manufacturers did not recognize this state of affairs and complained that they could not get a proper price for their product. The bulk of hardwood lumber from these small mills was sold as No. 2 common, with the mills culls out or No. 3 with the dead culls out. More discrimination should be exercised in segregating the lumber if the producers wished to obtain the highest price and to get the best out of their logs. Conditions in the trade were such today that most any figure could be secured on some lines as certain grades and thicknesses were scarce. Mr. Clark said the market was steadily improving but if prices were boosted unreasonably, it would prove a serious mistake and tend only to encourage the substitution of Southern hardwoods and so kill the market. In conclusion, Mr. Clark strongly advised that greater attention be given by the small mill-men to more scientific cutting and grading of their products. He thought that the discussion on the various problems which had been considered, would result in much benefit to the lumber industry in Canada as a whole.

## Banquet Was Brilliant Function

The fifteenth annual congress of the Canadian Lumbermen's Association was brought to a close on the evening of the second day by a brilliant banquet which was largely attended, many ladies gracing the social gathering. The tables were beautifully decorated and during the evening songs were sung in which all heartily joined. Mrs. J. Angus McKenzie, of Ottawa, rendered several solos which were much appreciated. The "Master of Ceremonies" was D. C. Johnston, of the Union Lumber Co., Toronto, who kept everyone in a merry mood by his numerous and surprising stunts. Very few of the notables present escaped attention. The dignified guests at the head table were requested to rise and, after doing so, were gravely called upon to sing that popular ballad "We won't go home till morning." The Toronto visitors were next singled out for a conspicuous part in the proceedings and commanded to sing a rollicking selection from the song sheet. The ladies also enjoyed their innings and W. Gerard Power, of Quebec, had to demonstrate that he possessed vocal talent by leading off in "Alouette." W. A. Filion, of Montreal, was invited to do his part in vocalization but made such

a pathetic plea of inability to offer anything suitable in that direction that he was finally excused.

A. E. Clark, President of the Association, ably presided and at the head table were the former Presidents of the Association, the Directors, the newly elected President, Angus McLean, and the Vice-Presidents as well as Hon. Beniah Bowman, Minister of Lands and Forest for Ontario and the speakers of the evening, Professor Gordon Laing, M.A., Ph.D., Dean of the Faculty of Arts, McGill University, Montreal who gave a stirring and humorous oration on "Canada" and Hon. Walter G. Mitchell, K.C., M.P., of Montreal, who eloquently replied to the toast of "Our Friends."

Alderman Seybold, of Montreal, who represented the Mayor, bade the convention welcome, with the hope that the lumbermen would return in the not far distant future to enjoy once more the hospitalities of the city. A warm salutation was extended to the new President, Mr. McLean, who thanked the lumbermen for the honor conferred upon him.

Mr. Clark also made a short valedictory address expressing appreciation of the support accorded him during the year. He was particularly pleased with the large attendance of what had been one of the most successful and satisfactory conventions ever held in the history of the C.L.A.

Dr. Gordon Laing, in responding to the toast of "Canada" was given a hearty reception and his remarks were replete with wit, wisdom and instruction. Every sentence was a gem and his pertinent observations on various features of national life, pursuit and development were rousing and cheered. He pointed out the impossibility of attempting to deal with such an important subject as "Canada" in

one after-dinner speech, which, he delivered with a series of whimsical notations and anecdotes and kept the gathering bubbling with laughter. A happy touch was given when he remarked that he should start modern history with a sketch of the early explorers reaching the Rapids here, under the impression they were going to China, and continue it "to the day that landed the Mackenzie King Liberals in power at Ottawa, with probably even less idea of where they were going." (Laughter).

But to deal with all this, he remarked, would take so long a time that before he had finished the Liberal party in Quebec might be out of power, Sir Henry Thornton have stopped making speeches, or even Toronto present arguments as to the magnificent advantages of Montreal as headquarters for the Canadian National Railways.

Interspersing his humor with more serious matter, Dr. Laing paid warm tribute to the Canadian lumbering industry as the force which had cleared the land to make farms, advanced industry throughout the country, developed water powers, created settlements and thriving towns, and contributed in very large measure to the progress of Canada.

"Our Friends" was replied to by Hon. Walter Mitchell, who adopted a similar humorous strain to that of Dr. Laing. He also spoke in praise of the lumber industry, with various references to the advantageous and sensible manner in which it had always been treated by the Liberal Government at Quebec. He explained that he was not doing this to help the Government in the present campaign, but simply to show the representatives of the lumber industry that the Quebec Government had always been alive to the necessity of giving them fair treatment, as some of their members had already pointed out.

## Some Notes and Jottings on the Montreal Meet

An interesting and instructive address was given by J. A. Wilson, of Ottawa, secretary of the Air Board of Canada. He spoke on the growing use and importance of aircraft in relation to forestry work and surveys. Moving pictures were shown of the hydroplanes in operation, the cruises they had made and certain tracts of timber surveyed. A full report of Mr. Wilson's remarks will appear in an early edition of the "Canada Lumberman."

At the opening of the convention the delegates were welcomed to Montreal by Mayor Martin who for ten years has been chief magistrate of the metropolis. His Worship extended greetings both in French and English and was introduced to the large gathering by his life-long friend E. H. Lemay, the veteran wholesaler and president of the Montreal Wholesale Lumber Dealers' Association. Mr. Lemay was present at several of the sessions and took much interest in the proceedings.

R. G. Cameron of Ottawa, Honorary Treasurer of the Association, presented his annual financial report and congratulated the C.L.A. on its fifteenth Anniversary. President Clark said it was important, in view of the statement presented, that the C.L.A. should have a larger revenue and more members. He added that the 190 members were carrying on a great work. The lumbermen, all of whom were sharing directly or indirectly in the benefits derived from the organization, were not sufficiently represented. If additional members were secured much more could be done for the advancement and welfare of the industry. He thought perhaps the subject of a graded fee might be considered so that the small man could come in and not have to pay as much as the large operator. It was important that the membership should comprise all lumbermen who conducted business either on a big or little scale. He also announced that ballots would be distributed for the election of seven new directors who would serve for the next three years. Three would be elected from Ontario, two from Quebec, one from Nova Scotia and one from New Brunswick. Only one representative from each firm would be permitted to vote, according to the constitution. G. M. Strong, of Montreal, S. B. Bond, of Bathurst, N.B., and W. Norman Fox, of Toronto, were appointed scrutineers and distributed the ballots.

The subject of "Insurance" was dealt with during the convention and a lucid and edifying exposition of the operation of the different companies, how managed, the premiums, cost of securing business and losses as applied to sawmills and lumber yards was given by G. D. Finlayson, of Ottawa, Superintendent of Insurance.

The topic was further discussed by W. E. Bigwood, of Toronto; W. B. Snowball, of Chatham, N.B.; J. Fraser Gregory, of St. John; Frank Kent, of Toronto, and others. A full outline of the many points brought out is held over until a later issue.

Frank Hawkins, Secretary of the Association, presented a short, verbal report. He said most of the work done during the year had been embodied in the reports which had been printed and sent out. He was glad to see so many friends present at the gathering, not only from Canada but from the other side of the line and referred to the presence of several officers from American lumber associations. Mr. Hawkins feelingly referred to the number of deaths that had taken place since the last annual meeting in Toronto and, in this connection, mentioned the passing of Alexander MacLaurin, of the Campbell-MacLaurin Lumber Co., Montreal; George B. Campbell of the Fraser-Bryson Lumber Co., Ottawa; Ward C. Hughson of Gilmour and Hughson, Hull, Que., and P. D. Gordon of Mason, Gordon and Co., Montreal; all of whom were honorable and upright members of the great lumber industry. Miss Hopewell, who had been a faithful member of the C.L.A. staff at Ottawa, had also passed away during the year.

Another matter, which Secretary Hawkins touched upon, was an address delivered recently by the Postmaster of Ottawa, before the Rotary Club in that city, in connection with the early mailing of letters. He suggested that every person should have in his office a list of the various hours when the different mails closed and get as many letters into the post as possible in order to avoid congestion. If business firms would observe this procedure and mail their letters earlier, delivery would be more prompt. "This is a most important matter," said Mr. Hawkins, "and we have tried it out in our own office and find that it saves a lot of time and delay."

During the proceedings it was decided by the Canadian Lumbermen's Association to send a message of greeting to the Ontario Retail Lumber Dealers' Association who were assembled at the same time in Windsor, Ont. President A. E. Clark, on behalf of the C.L.A., wired the following:—"The C.L.A. in annual meeting assembled, send heartiest greetings to their sister, the Ontario Retail Lumber Dealers' Association, now sitting in annual convention at Windsor, Ont., and expresses the hope that their deliberations may result in practical benefit to the lumber trade of Canada in all its branches."

Later came a reply from J. C. Scofield, president of the Ontario Retail Lumber Dealers' Association, which said:—"The O.R.L. D.A., assembled in annual convention at Windsor, have received a

W. E. Golding, St. John, N.B.  
Who took part in discussion on  
"Export"

W. J. Bell, Sudbury, Ont.  
Who was re-elected director  
of C.L.A.

J. Fraser Gregory, St. John, N.B.  
Who protested against cutting of  
Christmas trees

Spencer Kellogg, Utica, N.Y.  
Member of Board of Directors  
of C.L.A.

message of greeting from the C.L.A., and desires to reciprocate the friendly spirit of co-operation which it evidences and also express our wishes for continued success in your important work."

There were about 700 guests in the evening at the ball given by the lumbermen of Montreal and district to the delegates of the 15th Convention of the Canadian Lumbermen's Association, their wives and friends, at the Mount Royal Hotel. The dance was held in the banquet hall on the ninth floor, while the supper was held in the Oak Dining Room on the ground floor. There were guests present from Montreal, Quebec, Sherbrooke, Toronto, New York, Boston, and many other centres, and a thoroughly enjoyable evening was spent by both hosts and guests. The guests were received by Mrs. J. B. White, Mrs. A. E. Clark, Mrs. Arthur H. Campbell, Mrs. D. H. McLennan and Mrs. Albert J. Smith.

A hearty vote of thanks was moved during the convention to Wm. Kynoch, superintendent of the Forest Products Laboratories, Montreal, extending the gratitude of the C.L.A. for the many courtesies and co-operation of that institution in the past, and expressing appreciation of the splendid work which it was doing.

The noon-day luncheon tendered the men by the lumbermen of Montreal in the LaSalle Doree, on the main floor of the Mount Royal hotel on Wednesday, January 24th was a well-managed function. There was hearty singing and a lively programme of entertainment, speeches being practically eliminated, except a few timely words of welcome from the Chairman, George W. Grier, on behalf of the lumbermen of the Montreal district, and a short address from Hon. Senator Beaubien. "Jimmie" Rice had charge of the after proceedings and kept everything moving. During the relaxation which followed the appetizing meal, "Miss America," winner of the beauty competition at Atlantic City last year, was introduced, along with "Miss Mount Royal," of Montreal. The latter is taking part in a contest for the most attractive young lady in Canada's commercial metropolis. A unique feature was the introduction of a quartette of four, typical French-Canadian lumberjacks who were attired in the quaint and picturesque costume of the habitant and sang several old time, shanty songs in French which aroused enthusiasm. "The boys" showed that they possessed good clear voices and put spirit and action into their melodies. One lumberjack, 85 years old, executed some step dancing on a table and proved that, in agility and skill, he would not need to take a back seat with anyone of half his age. The rendering of the French-Canadian chansons was a decidedly effective feature of the mid-day function.

### Montreal Wholesalers Discuss the Sales Tax

The subjects of the sales tax, uniform terms of sale, credit and unjust claims were discussed at a meeting of the Montreal Wholesale Lumber Dealers' Association, held on January 18th, at Freeman's Hotel. Mr. J. S. Bock, the chairman, being out of town, Mr. Claud Villiers, vice-chairman presided, and Mr. Alex. Fenton acted

as secretary in the absence of the secretary, Mr. F. H. Devenish, who was kept away by sickness.

The question of the sales tax of 3% was brought up by O. Page, who expressed the belief that the wholesalers were entitled to relief. General discussion followed, Mr. Villiers explaining the steps which had resulted in the present position. Eventually it was unanimously resolved "that every effort be made by this Association to induce the Government to change the existing law to read so that the tax be borne entirely by the manufacturers."

After discussing the formation of a credit bureau from many angles, the meeting decided that a credit bureau is essential if the Association is to give the members the assistance which such a body should render. Steps to form a bureau are to be taken at once and a committee consisting of Messrs. W. B. Blair, O. Page and Alex. Fenton, were appointed to obtain data from existing bureaus in Toronto and New York and to report as soon as possible.

Uniform terms of sale was another subject which was debated. It was agreed that "Terms to the trade should be on the following basis: not longer than 2%-30 days from date of shipment or not longer than net 60 days from date of shipment." These terms will become effective at a date to be named later. The Montreal Retail Lumber Association has been notified of the passing of this resolution.

In connection with the establishment of a credit bureau, it is intended later to go fully into the subject of unjust claims. It was decided that in future the luncheons will be held at the Mount Royal Hotel every Wednesday at 12.30.

### Mr. MacFadden Changes Name of Firm

By a charter which was recently obtained, the firm name of McFadden & Malloy, of Spragge, Ont., has been changed to J. J. McFadden, Limited. The capital stock of the organization is \$5,000,000, and the officers are,—President, J. J. McFadden; Vice-President, J. P. Gillies; Managing-Director, R. F. Grimes; Secretary, P. T. Seymour. All those associated with Mr. McFadden have been in his service for years, and by co-operation and aggressiveness a splendid organization, has been built up. The company are among the largest operators in Northern Ontario, having mills at Spragge and Blind River, and during the coming season J. J. McFadden, Limited, will cut about 40,000,000 feet, principally pine. Some nine camps are being conducted and the log output will be larger than usual. Mr. McFadden reports that conditions in the bush have been favorable to logging and the prospects for the coming year are bright. It is understood that J. J. McFadden, Limited, have sold their entire cut for 1923 at a satisfactory figure.

It is also reported that a number of the other big operators in Northern Ontario have disposed of their production for the coming year to American interests at a considerable advance in prices for No. 2 shop and better; box and better; No. 1 and No. 2 culls.

Labor conditions are favorable in Ontario but it is learned that the disbursements for logging will be higher than last season owing to the advance in wages and other contributing causes. However, all the lumbermen on the north shore are quite optimistic regarding the results of the coming year.

# Ontario Retailers Discuss Many Questions

*Annual Gathering Held at Windsor Marked by Large Attendance, Much Enthusiasm, Aggressive Work and Splendid Results—Survey of Conditions for Coming Year is Encouraging*

J. C. Scofield, Windsor, Ont.  
Retiring President of O.R.L.D.A.

"The best ever!" was the universal verdict of those who attended the sixth annual convention of the Ontario Retail Lumber Dealers' Association, held at the Prince Edward Hotel, Windsor, on January 24th, 25th, and 26th. The attendance was large, the discussions were lively, the members optimistic and a feeling of confidence animated the proceedings.

Every district in the province was represented, and from the moment the convention started, the talks on the different subjects were entered upon by the retailers in a way that made everybody present feel they would return home having heard something worth while.

As announced by the secretary that the 1923 convention would incorporate some innovations,

these were distinctly a success, and long speeches were checked by the use of electric light bulbs on the chairman's desk. After a delegate had talked nine minutes, a red light was flashed which warned him to wind up his address as gracefully as possible. This was a great economizer of time, and the whole programme was conducted according to schedule, with very few exceptions.

President J. C. Scofield in his address of welcome to the retailers upon their visit to Windsor, told them in his sincere way how glad the members of the South Western section were of the chance to try and entertain them. He said that the retailers in and around Windsor, had, since the inception of the Association, wanted to have the annual gathering come to that city but hotel accommodation had always been against them, and so they had to build one large and grand enough to entertain the retailers.

Before launching the discussion of trade topics, the chairman introduced C. L. Bowes, of Chicago, Plan Service Manager, who explained the service to the retailers and emphasized the promptitude with which the company despatched to the patrons any information regarding the plans and worked them up to suit local conditions.

The first topic of discussion was that of trade ethics. The chairman for this period was F. B. VanDusen, of Brockville. Mr. VanDusen's opinion was that retailers alone could not elevate the business they were engaged in unless manufacturers and wholesalers were asked to join them in inaugurating fair, common business practices. In the matter of standard grades and sizes, he said the whole industry would have to come to an understanding soon or the Government would do it for them.

## Safety, Insurance and Loans

An interesting paper on insurance and compensation by W. C. Laidlaw, of Toronto, was read by secretary Boulthbee, which touched on many important points. Recently a 5% tax on foreign fire insurance policies was imposed but these companies had paid the tax and as a result had not encumbered Canadian foreign policy holders. Compensation was another subject dealt with fully. According to figures, the handling of material was the biggest hazard, while blood poisoning from splinters caused 19% of the accidents.

S. Herath, of Ojibway, was the chairman of a lively discussion on financing home building. Figures were disclosed, showing how difficult it was for prospective home owners in Canada to secure the necessary credit with only a small cash investment. In the U.S.A., the chairman pointed out, there were 8,600 Building and Loan Associations doing a business of \$1,400,000,000 each year. A great deal of enthusiasm was evidenced in this subject, and it was explained by the chairman why Building and Loan Associations were not existent in Canada. The Loan and Trusts Corporation Act stipulates that a corporation of this kind in Ontario would have to show a capital of \$300,000, with \$100,000 paid up. In the United States a Building and Loan Association is protected by the Government with only a \$5,000 capital.

A. J. Hager, of Lansing, president of the Michigan Retail Lumber Dealers' Association, was asked to say a few words on this sub-

ject, and told the retailers that if it were not for Building and Loan Associations in Michigan, 75% of their business would be cut off. E. M. Barrett, of Ottawa, made a motion that a resolution be sent to the Provincial Government, asking for permission to operate Building and Loan Associations and to co-operate with any other organization which looked at the matter from the same point of view as the O.R.L.D.A.

## Stopping Leaks in Lumber Business

Perhaps the most lively discussion of the whole convention was the topic introduced by M. R. Bogart, of Chatham, the subject being "The Big Leak in the Retail Lumber Business." Mr. Bogart pointed out the fallacy of confusing cost accounting with price adjusting. Costs represented all the items of expense that formed the cost of operating, and any margin of profit could be added after that. He stated further that no two men could quote exact prices on bills of lumber as they did on materials in other businesses because of the lack of comparison in the different qualities of the lumber products. He added that the coming of standard sizes and grades would make it possible to include the methods of arriving at a uniform cost.

Several members present were skeptical about the practicability of getting retail lumber dealers to agree on a uniform cost system, but it was the general opinion that fundamental rules of cost estimating should be brought to the attention of those, who were conducting their business in a haphazard manner to the detriment of the whole industry.

Accordingly, a committee, composing E. M. Barrett, Ottawa, George S. Zimmerman, Tavistock, and M. R. Bogart, Chatham, was appointed to study the best system of costs for retail lumber dealers.

This committee was asked as one of their duties to consult F. B. VanDusen, of Brockville, and W. M. Tupling, of J. R. Eaton & Sons, Orillia, who are now operating systematic cost systems.

Another subject that has been attracting the attention of retail lumber dealers, especially those operating planing mills and sash and door factories, is the apprentice problem. Robert Bennie, of Leamington, was the chairman for this important topic and compared the conditions of days gone by and the present in obtaining intelligent boys to learn the woodworking trade. He said that, in his establishment, the men engaged there ranged in age from 50 to 83, and found it difficult to obtain youths to learn the business. A pertinent suggestion was made by J. B. Mackenzie, of Georgetown, on the question. He told the members that during the last fall fair in his district he offered a prize of \$10.00 for the best piece of cabinet work. The result of this inducement, said Mr. Mackenzie, was that the boy who received second prize from the fair was entering his establishment to learn the trade.

A Shippers' Rating Bureau was another discussion conducted by K. J. Shirton, of Dunnville, which was given much attention. Mr. Shirton said that if such a bureau was in force, much of the troubles with shippers would be eliminated.

Standardization of grades and sizes was introduced by W. M. Tupling, of Orillia. He gave personal experiences where architects

K. J. Shirton, Dunnville, Ont.  
New President of O.R.L.D.A.

W. M. Tupling, Orillia, Ont.  
New Vice-President of O.R.L.D.A.

specified certain sizes of material that were not economically correct. Discussion then developed, emphasizing the point that it was difficult to limit the architect in his work, as originality was the keynote of an architect's profession. However, it was pointed out by several members that where originality was not included, that a great saving could be obtained through uniformity in sizes. As to grading, it was decided to keep in touch with the Central Committee in the United States, now working on the subject, and study the work being done along that line.

The relation between wholesalers, retailers and contractors was introduced by A. R. Sanders, of St. Thomas. This discussion was a profitable one and touched on the point of how wholesalers should, in the interest of the whole industry, be careful that they are doing business with strictly legitimate retail lumber dealers.

Accident prevention was dealt with by George H. Arnott, superintendent of the Windsor Lumber Company's factory. He explained the profitable use of first aid cabinets and also drew the attention of the members to the bad effects produced by dull knives and saws which often caused the material to buck and injure the operator.

One address given that was of much interest to the retail lumbermen was on fire protection, by Clarence DeFields, chief of the Fire Department, Windsor. The chief gave several examples of where inefficient fire equipment in and around large lumber yards and factories was the causes of thousands of dollars' loss to men in this line of business. He told the retailers just what fire-fighting

equipment should be used for certain size businesses and how the proper care of it in the building had much to do in facilitating the firemen making a thorough job of extinguishing a blaze. He told one or two stories of how clogged-up aisles in the mills, after working hours, were the cause of loss in hindering the fire department from getting around into the corners.

There seemed to be a general opinion among the retailers that a re-distribution of territory in regard to branch meetings would be desirable, and it was left in the hands of the new Executive to make the necessary changes.

#### Officers Who Will Be at Helm

The election of officers for 1923 resulted as follows:—

President,—K. J. Shirton, Dunnville.

Vice-President,—W. M. Tupling, Orillia.

Directors for Eastern District,—Grant P. Davidson, Ottawa; F. B. VanDusen, Brockville.

Directors for Central District,—J. H. Rodgers, Barrie; W. E. S. Savage, Mimico.

Directors for Niagara District,—T. Patterson, Hamilton; J. T. Grantham, Brantford.

Directors for Southern District,—A. R. Sanders, St. Thomas; M. R. Bogart, Chatham.

Directors for Northern Section,—F. E. Hollingsworth, Sault Ste. Marie; M. J. McDonald, Port Arthur.

## Resolutions Adopted at the Windsor Convention

### Adopt System of Apprenticeships

Moved by H. F. VanDusen and R. S. Gilchrist, of Toronto, that in the opinion of this convention the members of the Ontario Retail Lumber Dealers' Association be urged to adopt a system of apprenticeship to relieve the dearth of competent workmen in the planing mill and factory branches of the business; that such system extend over a period of three years and that adequate remuneration be given such apprentices so as to ensure their completion of the course and thus relieve the present situation, and that a copy of this resolution be sent to the lumber trade journals.

### Building and Loan Associations

Moved by K. J. Shirton, of Dunnville, and J. J. Cluff, of Seaforth, that we recognize the importance and value of the work that the Building and Loan Associations are doing in other places, and believe that it would be a desirable thing for our Association. Be it resolved, therefore, that the secretary and directors be requested to take this matter up with the Ontario Government, looking to their permission to form such organizations and to co-operate with any other organizations which are looking at the matter from our point of view.

### Standard Sizes and Grades

Moved by W. M. Tupling, of Orillia, and W. J. Aitchison, of Hamilton, that a standing committee be appointed by the president to keep in touch with the work of the General Committee in the United States on standard sizes and grades and to study this question and take action, if necessary.

### Legitimate Retail Lumber Dealer

Moved by J. T. Wallace, of London, and E. M. Barrett, of Ottawa, that the following constitute a legitimate retail lumber dealer:—Any person, firm or corporation carrying an assorted stock of lumber, lath, shingles, and interior trim reasonably commensurate with the needs of the community in which they do business. This Association puts itself on record as considering the following legitimate customers for retail lumber dealers only,—contractors, consumers and manufacturers using one or two carloads per year. Be it further resolved that our secretary be instructed to send a copy of this resolution to all wholesalers and manufacturers.

### Co-operating on Transportation

Moved by J. T. Wallace, of London, and by B. F. Clarke, of Glencoe, that our Association be prepared to co-operate with the Canadian Manufacturers' Association in connection with matters of transportation and that J. R. Eaton & Sons

of Orillia and A. G. Rose, of Ottawa, be authorized to appear on behalf of the Association at the forthcoming conference on classification of joinery work.

### Prevention of Accidents

Moved by Thomas Patterson, of Hamilton, and John C. Gilchrist of Toronto, that we recommend to the members of the Association that they take every step possible for the prevention of accidents and that they co-operate as fully as possible with the representatives of the Accident Prevention Association.

### Shippers' Rating Bureau

Moved by W. J. Aitchison, of Hamilton, and W. E. Savage, of Mimico, that we recommend that the members notify the secretary whenever unsatisfactory conditions arise between them and shippers, rather than that the Association establish a Shippers' Rating Bureau, and that the secretary issue to the members at an early date a blank form upon which they are requested to submit complaints of this nature.

### Cost Accounting System

Moved by W. M. Tupling, of Orillia, and L. H. Richards, of Sarnia, that, recognizing the importance of accurate cost accounting to our members, be it resolved that a standing committee be appointed for the year 1923 to enquire into the feasibility of working out and submitting to our members the main factors in connection with cost accounting; the committee to consist of Messrs. Zimmerman, Barrett, Bogart, VanDusen and Tupling.

### Other Resolutions Passed

Another resolution passed during the convention was one thanking the South Western Ontario Retail Lumber Dealers Association for their hospitality and entertainment during the convention. Votes of thanks were also tendered to the speakers who led in the discussion on the various topics that came up for consideration; to L. H. Richards, of Sarnia, for his splendid work as chairman of the midsummer outing last year; to Fire Chief DeFields, of Windsor; G. H. Arnott, of the Windsor Lumber Co., Windsor; Douglas Malloch, of Chicago, and Jack Miner, of Kingsville; the trade and daily press for their full reports of the gathering.

It was decided that the selection of the place and date of the next annual meeting should be left in the hands of the president and secretary, who were also empowered to make full arrangements for the annual midsummer outing which will probably be a boat trip down the St. Lawrence and through the Thousand Islands.

# Secretary Summarizes Work of the Past Year

H. Boulton, Toronto, Ont.  
Secretary O.R.L.D.A.

The annual report of Secretary Boulton, which was distributed among the members, contained a comprehensive review of the activities of the Association during the year. In the introductory remarks, it was pointed out that the Ontario Lumber Dealers' Association had made good progress and that its activities had been different considerably from those of former years. From 1918 to 1921 the O.R.L.D.A. had a large number of cases of complaint by members against shippers and others who were not giving the retailer a fair or business-like treatment and also dealt with other matters varying from the holding of local meetings to the interpretation of the sales tax. All these matters have been dealt with each year in the secretary's annual report. Continuing,

the Secretary dealt specifically with many subjects of much interest to the members of the retail trade.

Complaints by members against shippers have been comparatively few. It would be interesting to enquire into the reasons for this if we had the necessary information upon which to reach a conclusion. It is worth while bearing in mind, however, the fact that the past year has been a good one, with firm prices, and that such complaints, according to past experience, are more likely to develop under these conditions than during a falling market. The most natural conclusion that your Secretary can arrive at is that the co-operation of the dealers during the past five years has had a good educational effect both upon themselves and upon those shippers who formerly gave the retailer a raw deal whenever he had an opportunity. Apparently we have ourselves very largely to thank for this important betterment in trade ethics.

The wide scope of our co-operation and the interesting results secured by it are clearly indicated by the following reports upon some of those matters that came under the attention of the Secretary during the year 1922.

## Building and Loan Association

One of the subjects that occupied the attention of the Association to a considerable extent during the year was that of Building and Loan Associations. Our President has always been keen on developing some way in which Retail Lumber Dealers can simplify the problem of loans for the erection of houses. Under present conditions a prospective builder of a home can obtain a first mortgage only up to about 50% of the value of the proposed building. If he finds that he needs more money to build the house, he must borrow on a second mortgage and pay an almost prohibitive discount for this loan. Undoubtedly this situation prevents many mechanics and workmen, who are in receipt of fair-sized wages, from ever being able to own a home of their own. In the United States there are a large number of Building and Loan Associations operating on a plan under which small payments may be made at regular and frequent intervals by those who desire to save their money for the purpose of building a home, and when these payments amount to a comparatively small proportion of the total cost of the building they are entitled to a loan which will enable them to proceed with their building operations. Subsequently they continue their payments until the whole amount of the loan is wiped out. Those Building and Loan Associations also sell shares outright to other parties who desire to invest their money in this manner. The record of these Associations is an enviable one, as they have promoted home-owning and very seldom have come to grief. The plan upon which they are working is quite sound.

Unfortunately, in Ontario, we are not able to operate in this manner. Some years ago in Ontario two of the large Loan and Savings Companies came to grief. These were companies issuing what were known as "Terminating" shares, on which small payments were made at regular intervals by the parties taking out the shares. As a result of these two companies failing, the Ontario Legislature

amended its Loan and Trust Corporations Act by requiring that all stocks and shares in such corporations hereafter incorporated shall be fixed, terminated, and non-withdrawable. This did away entirely with the "Terminating" share in Ontario.

It is further provided by the Loan and Trust Corporations Act of Ontario, as it now exists, that any person, corporation, partnership, association, etc., undertaking a contract of the "Terminating" share description shall be guilty of an offence and liable to an order for restitution of the money and a term of imprisonment not exceeding twelve months.

It appears, therefore, that the ordinary Loan and Building Society or Association can no longer be incorporated in Ontario. The only alternative under the Act is the incorporation of a regular Loan and Trust Company. For this purpose an application must be submitted stating that at least \$300,000 of stock has been subscribed by at least twenty-five responsible subscribers in the case of Trust Corporations, and at least \$100,000 in other cases, and that at least \$50,000 of the subscribed stock has been paid in cash by the subscribers into an Ontario branch of a chartered bank of Canada in trust for the proposed corporation. Similar requirements prevail in connection with incorporation under a Dominion Charter.

In view of this situation, our President submitted the whole matter to Mr. S. Herath, of Ojibway and asked him to make an investigation and report at our present Annual Convention. Mr. Herath has gone very fully into the matter, has taken legal advice, and is to give an address upon the subject during the Convention.

## Mechanics' Lien Act Discussed

The Secretary then detailed the steps to secure the proposed new Mechanics' Lien Law, which has been published in the "Canada Lumberman." After detailing all that had taken place before the special committee and the Ontario Legislature, the report says:

When the situation had reached this stage, your Secretary, on the instruction of the President, managed to bring about a conference between officially appointed representatives of the Association of Canadian Building and Construction Industries, the Toronto Builders' Exchange and the Canadian Manufacturers' Association. At this conference it was informally agreed that in so far as possible the interests represented should co-operate in connection with their efforts to improve the Ontario Mechanics' Lien Act, and three points were agreed upon and submitted to the Commissioners on "Uniformity of Legislation." These points were as follows.—

1. In the event of default by the contractor or cancellation of contract, the owner shall not have the right to set off his subsequent claims on percentage retained, as against material men.

2. In the event of default by the contractor or failure of the owner, seven days more than the thirty days now allowed should be afforded for registering liens.

It was also agreed to recommend strongly the unification, so far as possible, of the various lien laws of the Provinces of Canada.

Your Secretary discontinued the services of the Association legal counsel in connection with the Lien Act early in the year, when it appeared that we had reached the end of our tether for the time being. He would now suggest that the incoming Directors should watch the situation closely and be prepared to co-operate with others, or act individually if necessary, in case the Ontario Legislature decides to change the existing law, but that at present it would not be advisable to continue our former efforts in the direction of securing a new Mechanics' Lien Act.

## Some Matters for Arbitration

In the matter of arbitration, the report said—One matter of arbitration came before us during the year and was submitted to our Arbitration Committee. This was a dispute between a Toronto retailer and a wholesale dealer in Victoria, B. C., relating to an allowance on account of certain material not being as wide as the retailer believed he had ordered. The correspondence in this case was submitted to our Arbitration Committee and they advised us that in their opinion the proper method of settlement would be that the retailer should pay the amount of the invoice less an allowance for one-half of the difference in width of the material, because, in their opinion, both parties to the contract were to blame. We subsequently had a letter from the wholesaler in Victoria, expressing readiness to abide by this decision and stating that he was taking the matter up

with the retailer. We believe that it was subsequently concluded satisfactorily.

In another case a manufacturer asked us in regard to a carload shipped to a Toronto dealer, part of which had been rejected because it was too thin. The mill in Vancouver took the position that because the car had been received and unloaded, it had been accepted, in accordance with the "Bill of Sales Act." They asked us our opinion on the matter. Before replying we consulted several wholesalers in Toronto, who had had extensive experience with shipments from British Columbia, and we then advised that the mill was mistaken. Unloading of the car could not be considered as acceptance, otherwise the retailer would be buying in the dark, as he could not know what the car contained until it was unloaded. We also advised that we believed the retailer in this particular case had a definite claim in connection with stock that was below thickness. This view was the result of interviews with several wholesalers and retailers in Toronto. As we heard no more from the mill, and nothing from the retailer in question, we presume that the matter was settled amicably along the lines we suggested.

#### The Standardization of Lumber Grades

The standardization of sizes and grades of lumber has always been an interesting matter to our members. Unfortunately, up to date, it has not been found possible to adopt any course that will lead to improvement of the existing situation. A development that has occurred in the United States during the past year may have important bearing on this matter, and your Secretary believes that it should be considered by the Association at the present Annual Convention. Mr. W. M. Tupling has undertaken to submit an outline of the situation and a discussion of it, after which open discussion from the members will be in order.

Briefly, the situation is that Mr. Herbert Hoover, Secretary of Commerce for the United States, suggested to the manufacturers, retailers and consumers of lumber in the United States, early in 1922, that they should get together and establish standard sizes and standard grades for softwoods and hardwoods, and that they should devise a means for securing inspection and giving a guarantee to the consumer as to the sizes and grades he was buying. The National Lumber Manufacturers Association of the United States, the National Wholesale Lumber Dealers Association of the United States, the National Retail Lumber Dealers Association of the United States, the Hardwood Manufacturers Association of the United States, and a large number of the regional associations, both manufacturing and retailing, have taken up this matter. At a joint Lumber Congress held in Chicago, a Central Committee of seven was appointed representing each of the branches of the industry as well as the consumers of lumber. This committee has opened an office at Washington, and is in touch with the various lumber Associations through the country. It is endeavoring to work out grading rules and an inspection service that will be acceptable to all. It is believed that if this movement in the United States is successful, it cannot help but influence the situation in Canada, and your Secretary has, therefore, thought it well to submit the matter for discussion.

#### Association Membership Still Growing

In view of the advisability of joint action among retailers in Canada upon this important subject, we wrote in August to the Western Retail Lumbermen's Association at Winnipeg, and we had from them an assurance that they will be glad to co-operate with us if the occasion arises.

The report referred to the new Toronto Branch of the O.R.L.D.A. and also the membership of the O.R.L.D.A., which now stands at 201, an increase of 15 over last year. In 1918 the membership was 131, so that each year has shown a considerable growth. The Secretary then dealt extensively with the midsummer outing up the lakes, lower freight rates and plan book service. Other matters touched upon were the time limit on stop-over, demurrage rates, the sales tax and cost accounting.

#### Stop-over and Demurrage Rates

The question of increasing the time limit at stop-over points on lumber and forest products for milling and sorting has been a subject that we have had under consideration with the railway companies for considerable time. The Canadian Lumbermen's Association and the Canadian Manufacturers' Association, who were also interested, were co-operating. The result of this operation eventually was an increase in the time from 30 days to six months, this change having gone into effect September 25, 1922.

Prior to our last Annual Convention the Board of Railway Commissioners had issued an order on the application of the Canadian Manufacturers' Association, the Canadian Lumbermen's Association, and ourselves, for reductions in rates of demurrage from \$2.00 per day in the second day to \$1.00, but increased it for the third and fourth days to \$5.00 from \$3.00 and \$4.00 respectively. We protested to the Board against this action, claiming that no evidence had been submitted which would warrant any increase and that our applica-

tion requested reduction, therefore the question should be reopened or adjusted. However, owing to considerable difficulty in securing necessary evidence in support of our complaint from individual firms, which is the only basis which would be satisfactory, we were compelled eventually to let the matter drop for the time being and the question is therefore in that position to-day.

#### Operation of the Sales Tax

Early in April newspaper reports appeared to the effect that the Canadian Manufacturers' Association and others were considering a suggestion that they should urge the Minister of Finance to alter the Sales Tax so that it would be paid by the retailer. This matter was submitted to our President and Directors and as a result our members were asked to write to the Minister of Finance opposing any such proposal and urging that the tax should remain upon the manufacturers, who should not be required or permitted to show it upon his invoice as an additional item. While the new Sales Tax did not relieve the manufacturer of lumber of the duty of showing the amount of the tax upon his invoice, the wholesaler and the retailer have not been required to pass on the tax. There is "no further tax upon re-sale" in connection with lumber. Our views as presented to the Minister in this connection probably assisted him considerably in reaching a conclusion.

In March, 1922, the Canadian Manufacturers' Association sent out a circular regarding the sales tax along the lines mentioned above. We drew their attention to the fact that their proposal would meet with very serious objection by retailers and we were subsequently advised by them that they had withdrawn the proposal entirely.

At the request of one of the members of the Association, and on the instruction of our President, the Secretary sent out on July 13th an enquiry to all the members in regard to carpenter contractors who make their own sash, frames, etc., in connection with their jobs, and do not pay any sales tax upon the product. We asked our members whether they found cases of this in their districts, and whether they thought that we should take the matter up with the Department of Customs. We received a large number of replies, and many of these expressed an opinion strongly adverse to the Association taking the matter up with the Department. Accordingly the matter was not proceeded with any further.

#### Advantages of Cost Accounting

At the Convention of the National Retail Lumber Dealers Association at Cleveland in October, much attention was given to the subject of "Cost Accounting." This has been discussed frequently by our Directors and at our Annual Meetings. The situation as it has developed in some of the Northern States is interesting. In Ohio and in New York and Massachusetts special committees have been at work on this subject for a couple of years past and two systems of cost accounting have been worked out—one for Ohio and one for the members of the Northwestern Association. These systems are already in use and are highly praised by the dealers in these States. As we understand them, they are not systems which cost a great deal of money to install or require serious changes in the methods that dealers already use. They are designed chiefly to make use of the existing systems and to arrange some of their details so that it becomes possible to make comparisons as to costs between operations in the different yards which follow the same plan. The actual cost of changing over to these systems is very small, not more than about twenty-five dollars, and consists chiefly in the cost of a few special lines of stationery.

The Northeastern system and the Ohio system, according to reports presented at Cleveland, are very similar. The National Association discussed the advisability of working these two systems into a single system for use throughout the United States. Both the Northeastern Association and the Ohio Association expressed their readiness to scrap their own systems if necessary in order that a standard system might be adopted by the National Association.

Apparently, if such a standard is adopted, by a Special Committee which was appointed for this purpose, it will resemble in nearly all its details either one of the two systems now existing. Believing that the results already secured in these States must have considerable value to our members, we have secured from the Northeastern Association a copy of their system. On the instructions of our President, this system, together with some correspondence on the subject was submitted to a Special Committee in November. The committee consists of dealers in Toronto, who can meet conveniently in order to study the subject. They held one meeting for organization and appointed Mr. W. Warren, of the Myers Lumber Company, as Chairman. Then they arranged that each member of the committee should individually make a study of the system in use by the Northeastern Association, and they adjourned until each member could have the material for personal study. The proposal was then that they should hold a meeting and be prepared to report at our Annual Convention. Your Secretary expects that Mr. Warren will have a report to present when the subject of Cost Accounting is up for discussion.

# Wholesale Lumbermen Elect New Directors

*Encouraging Reports Presented on Work of Past Year—Plans Outlined for Increasing Interest and Activities of Organization—Live Board Chosen*

Alex. C. Gordon, Toronto  
Newly-Elected Chairman

Alex. C. Gordon, who was vice-chairman of the Wholesale Lumber Dealers' Association last year, was elected chairman for 1923 at the annual meeting held at the Albany Club, Toronto, on January 12th. There was a large attendance and much interest developed in the elections. K. M. Brown and C. W. Wilkinson were also nominated for the position of presiding officer, but withdrew. In taking the chair, Mr. Gordon who for many years has been associated with the firm of Mickle, Dymont & Son, thanked the members for the honor conferred upon him, and hoped that the meetings during 1923 would be full of interest and profit to all. He said that the success of the organization depended, not on the president alone, but upon the co-

operation of the Board of Directors and the enthusiasm and interest of the members.

For the directors five entirely new men were chosen, ten being nominated. The new Board will consist of H. G. McDermid (Union Lumber Co.); Alfred E. Read (Read Bros.); F. H. Bigwood, (Canadian General Lumber Co.); L. D. Barclay, (Canadian Western Lumber Co.) and R. G. Chesbro. After the election, the newly-elected officers were called upon for short speeches and all declared that prospects looked bright during the coming twelve months, not only for the Association but for the lumber trade in general. H. Boulthée was re-elected secretary-treasurer of the Association.

During the early part of the evening H. J. Terry, president, presided, and briefly reviewed the events of the past year. He expressed his pleasure that R. G. Chesbro had recovered from his rather protracted illness and was now able to be present and he also welcomed back to the fold C. W. Wilkinson who had been absent for a long period. The chairman reviewed the nature of the meetings during the past year and the special features which characterized them. He thought the interest, particularly during the

latter months, had been well sustained. Mr. Terry suggested perhaps it might be advisable to increase the fees for membership. This was a subject which he liked to see discussed. The Association meant a great deal to the lumbermen from many standpoints and its Credit Bureau was an institution of great service and benefit. In conclusion Mr. Terry said,—"We have done our best, and if the year has been satisfactory to you, it has been satisfactory to the Board."

Secretary H. Boulthée presented his statement, showing a substantial balance on the right side of the ledger. Reports were then received from the various committees, A. C. Gordon reporting on behalf of the Membership Committee; K. M. Brown the Attendance Committee; A. E. Gordon the Audit and Finance Committee; H. G. Chesbro the Arbitration Committee; H. G. McDermid, the Bureau of Information; W. C. Laidlaw, the Fire and Marine Committee; W. E. Bigwood, the Inspection Committee; A. C. Manbert the Legislation Committee; A. E. Clark, the Transportation Committee; Alfred E. Read, the Trade and Relations Committee; H. A. Rose, Terms of Sales and L. D. Barclay, Entertainment Committee.

Most of the chairman reported everything had gone smoothly and harmoniously during the past year and that there had been very little for some of the committees to undertake. K. M. Brown, for the Attendance Committee, said that about 60% of the local membership had been represented at each monthly gathering and so far as the general membership was concerned, the attendance during the spring had been about 53% but during the fall months it had increased to about 75%. He spoke of the benefit of Association work and the members getting together for an expression of ideas, the interchange of confidences, the righting of wrongs and the removing of prejudice, etc. Mr. Brown declared that everyone should put his shoulder to the wheel, and asserted that each member got out of the Association and its work just exactly what he put in.

Mr. McDermid, reporting for the Bureau of Information, said the average monthly returns from the firms had been about 70% and the highest 98% of membership. He said this is one of the most important features of the Association and he thought that all should co-operate heartily in sending in their statements by the 15th of each month.

A. C. Manbert, for the Legislation Committee, made some facetious reference to the sales tax and declared lumbermen now regarded the payment of this, not as a tax at all but as a very distinct pleasure.

Mr. Clark, for the Transportation Committee, said he was also chairman of the Transportation Committee of the Canadian Lumber-

L. D. Barclay, Toronto  
Newly-Elected Director

men's Association and had managed to largely merge the work and load it on to Mr. Sargent, Transportation Manager, at Ottawa. The Department of the C.L.A. had done effective work during the past year. He thought all complaints as to overcharges, claims, etc., should be made known to the Department. In checking of freight bills too much care should not be exercised. He believed that the Transportation Department was now working in closer harmony and co-operation with the railway interests than ever before and when changes in regulations, etc., were being made, advance copies of the amendments were now sent to the Traffic Department of the C.L.A. to have them looked over. Mr. Clark said that with the lumbermen and railways working together in a friendly spirit greater progress could be made. Railway finances had of late been improving and he hoped they would remain in this condition so that some time in the not far distant future—another application might be made by the forest products men to be relieved further from the burden of freight rates. In closing, Mr. Clark referred again to the importance of the Transportation Bureau.

In reference to the terms of sales, Mr. Rose reported that these were apparently satisfactory and there was not much use in trying to change them.

L. D. Barclay, chairman of the Entertainment Committee, spoke of the success of the picnic last summer at the Lake Shore Country Club and of the recent Yuletide meeting when an entertainment was put on.

Several other matters were brought up regarding the work and worth of trade Associations and how the interest of members and firms might be increased and a greater push made for new members. The recent organizations of the wholesalers in Montreal was referred to appreciatively as an evidence of the way the Association spirit was developing, and it was declared that the Montreal body was off to a fine start. Among those who recently addressed the gathering in the commercial metropolis were A. E. Clark, Frank Kent and others. Valuable suggestions for increasing the attractiveness and usefulness of the meetings were made by A. E. Eckardt, A. C. Manbert, K. M. Brown, J. L. Campbell and others.

## Montreal Retail Lumbermen Call for Grading Rules

The grading of lumber was the main subject of discussion at the meeting of the Montreal Retail Lumber Association, held at Freeman's Hotel on January 10th. The question of the relations between wholesalers and retailers was also on the agenda, but this was postponed until the next meeting.

J. F. Dupuis who presided, referred to the large attendance and to the increasing interest in the association. He recapitulated what had been done, pointing out that the original idea of making the association a section of the Chambre de Commerce had been abandoned in favor of an organization independent of any existing institution.

It was decided to appoint Capt. G. A. Thompson secretary of the Association. Mr. Dupuis stated that Capt. Thompson had served four years at the front in the Aviation Corps and had brought down the Germans.

It was agreed that the temporary committee be authorized to carry on the association until the permanent officers are elected.

G. Tyler, Montreal manager of the Seaman, Kent Co. Limited, attended and gave the answer of his company to certain suggestions of the Association relative to the selling policy of the company. He stated that while the company could not see their way to accede to the suggestions, the company were willing to make certain concessions to the retailers in the matter of discounts. The chairman thanked Mr. Tyler for his attendance.

A discussion on the grading of lumber followed, in which Messrs. Thomson, Therrien, Stewart, Rutherford, Halliday and Pare took part. It was initiated by a suggestion of W. H. Thomson that some steps should be taken to obviate delays in the shipment of cars of spruce. These delays were, he said, often due to a difference of opinion between the wholesaler and retailer as to the grade, and he suggested the appointment of an arbitrator who would decide between the wholesaler and retailer.

The chairman agreed that something on these lines was desirable, and he pointed to the good work done by the National Hardwood Lumber Association.

Stewart Rutherford declared that he wished the word "merchantable" could be eliminated from the dictionary. Different mills supplied different qualities of lumber under this general description. It was difficult to define what 5th quality was. In pine the position was more difficult than in spruce. If some means could be devised by which grades could be positively defined, the retailer would be in a position to know exactly what he was buying, and if the lumber shipped did not come up to grade, then the cars could be sent back. He suggested that a recommendation be sent to the Canadian Lumbermen's Association that the manufacturers should get together and establish definite grades and appoint inspectors to see that the grades were delivered.

The chairman mentioned an instance where a month's delay was caused owing to some difference of opinion as to the grade of certain lumber—a delay which could have been avoided had there been a system of inspection.

Mr. Pare pointed out that certain manufacturers had definite grades to which it was replied that the idea was to get all manufacturers on the same basis.

Mr. Halliday suggested that it might be well to take up the question with the wholesalers who are equally interested.

The following were appointed to draft a letter to the Canadian Lumbermen's Association on the subject of grading and the appointment of inspectors,—Messrs. Dupuis, S. Rutherford, Fortin and Thomson.

On the motion of the chairman, Leon Gagne was cordially thanked for his work in organizing the association and acting as temporary secretary. Mr. Gagne briefly replied.

### Boom and Improvement Companies Meet

The annual meetings of the various Boom & Improvement Companies, operating on the Georgian Bay and the waterways which flow into this great inland body, held their annual business meetings at the Queen's Hotel, Toronto, on January 17th and 18th. There was a good attendance of lumbermen interested. Most encouraging reports were presented on the operations of 1922, no logs being held back in the streams. Conditions generally were favorable in regard to clean-ups, sorting, driving, towing, etc., during the past season.

The French River Boom Co., Limited, which handles all the logs of the various owners coming down the French River to the Georgian Bay, elected,—President, W. J. Sheppard, Waubaushene; Secy. Treas., W. F. Beck, Penetanguishene. The directors for the coming year are,—F. N. Waldie, Victoria Harbor; W. J. Bell, Sudbury, and W. E. Bigwood, Byng Inlet.

The Mississauga River Improvement Co., Limited, which handles the logs on the stream bearing that name, and looks after all improvements, will have its affairs supervised in 1923 by:—President, J. J. McFadden, Blind River; Manager, Arch. Carrier, Blind River; Secy.-Treas., N. K. McCrimmon, Blind River; Directors:—F. N. Waldie, Victoria Harbor; C. N. Carney, Thessalon; Ed. McFadden, Blind River, and W. E. Bigwood, Byng Inlet.

The Spanish River Improvement Co., Limited, elected-President, W. E. Bigwood, Byng Inlet; Secy.-Treas., Chas. McCrea, M.L.A., Sudbury; Manager, W. J. Bell, Sudbury.

The Sable & Spanish River Boom Co., of Algoma, which handles the logs on the Spanish River, appointed the old officers who are,—President, W. E. Bigwood, Byng Inlet; Secy.-Treas., Chas. McCrea, M.L.A., Sudbury; Manager, W. J. Bell, Sudbury; Directors, J. J. McFadden, Blind River; W. E. Bigwood, Byng Inlet, and F. N. Waldie, Victoria Harbor.

The Log Picking Association, which operates on Georgian Bay in the recovery of logs lost in towing, rafting, etc., named the following committee to look after its affairs for 1923:—W. J. Sheppard, Waubaushene, (chairman); Ed. Letherby, Midland, (Secy.-Treas.); F. N. Waldie, Victoria Harbor; W. J. Bell, Sudbury, C. N. Carney, Thessalon; J. J. McFadden, Blind River; W. E. Bigwood, Byng Inlet, and W. F. Beck, Penetanguishene.

### Annual of Lumbermen's Credit Bureau

The annual meeting of the Lumbermen's Credit Bureau was held recently in the Board of Trade rooms, Toronto. The Bureau was organized in 1915 and has operated smoothly and efficiently since its inception. satisfactory reports were presented covering the past year's operations, and the finances were shown to be in good shape. O. M. Moore presided and delivered a short address on the work of the Bureau, its growing importance, service and usefulness. He stated that its affairs were now on a solid basis and the worth of the institution was generally recognized. The election for the coming year resulted in the former officers being returned. They are,—Chairman,—O. H. Moore; Board of Directors,—F. R. McFarren, A. U. Cote, F. Ryan, S. McCord, T. A. Paterson, A. McCabe, Secretary-Treasurer, H. Boulton.

## Mr. Brown Joins A. E. Gordon Co.

Kenneth M. Brown, Toronto

Kenneth M. Brown, who for the past three years has been in charge of the Eastern Canada office of the Vancouver Lumber Co., Limited, Vancouver, with headquarters in the Excelsior Life Building, Toronto, has joined the A. E. Gordon Lumber Co., Toronto, which was recently formed, and this month assumed his new duties as manager of sales for that progressive organization. Mr. Brown is one of the most energetic and wide-awake lumber salesmen coming out of the West and has established a wide connection. For the past year he has been one of the directors and chairman of the Attendance Committee of the Wholesale Lumber Dealers' Association, in which he has taken a lively interest. Mr. Brown, whose native city is Minneapolis,

took his first position with the Atlas Lumber Co., being a member of the head office staff. This was in 1912, and two years later he became identified with the International Lumber Co. and was engaged in warehousing, clerking, scaling and logging operations at their divisional headquarters at Ray, Minn. Returning to Minneapolis, he again joined the Atlas Lumber Co. He was afterwards associated with the Adams Lumber Co., and for the past four or five years has been engaged with the Vancouver Lumber Co., rising from the post of shipping clerk to that of manager of their eastern sales office.

His successor in the Vancouver Lumber Co. will be R. S. Plant, who has been associated with the firm in its eastern work for a considerable time past. Mr. Brown's many friends will wish him every success in his new sphere of operation with the A. E. Gordon Lumber Co. of Toronto.

## News of Industry in Short Shape

F. N. McCrea, M.P., of Sherbrooke, Que., president of the Lotbiniere Lumber Co. and of the Brompton Pulp & Paper Co., who has been ill for some time, was, according to last reports, making good progress toward recovery.

Wm. W. Winter, of Selby, Ont., died recently at the lumber camp of Gunter & Dennison at Judson, Ont. He was only twenty years of age, and heart failure was the cause of his death. He had many friends in Lennox and Addington County.

The employees' club of the Myers-Warren Lumber Co., Toronto, held their first annual banquet recently which was a signal success. There were about seventy-five present and many interesting contributions to the proceedings were supplied by local talent.

C. W. Palmer, of Wroxeter, Ont., will shortly start operating his new sawmill. During the past few days he has been busily engaged in making the final installation of equipment. Mr. Palmer is widely known in Huron County and will soon be in a position to cater to the increased demand for lumber.

Hon. J. A. Robb, Minister of Trade and Commerce for Canada, visited Indian coast cities on his return from Australia, and he describes India as a great and growing market for Canadian timber, railway ties, automobiles, iron and steel products, paper, carbide, electrical equipment and musical instruments.

One hundred thousand hard wood ties for the Canadian National Railways are to be creosoted at Sydney by the Dominion Tar & Chemical Company. Shipments of ties to Sydney will commence soon, and the work of creosoting will start about the first of June and occupy two months.

What is considered to be a record-breaking wood-cutting bee took place at James Murray's farm in Esquesing Township recently near Milton, Ont., when a circular saw driven by tractor power with six gallons of coal oil cut eighty single cords of hardwood in four and one-half hours. The saw has been in use on Mr. Murray's farm for over half a century.

Allan McPherson, of McPherson & Clarke, retail lumber dealers, Glencoe, Ont., was recently returned by acclamation as reeve of that village at the municipal election. This makes the fourth time that Mr. McPherson has been selected for the office, which speaks well for his record and service in the interest of the residents of Glencoe.

A recent despatch from Port Arthur says: Tie camps are springing up like mushrooms in the best timbered country on both sides of the Twin Cities. On the Canadian National East, several have been located recently. The demand for ties will be heavy next Summer on account of the proposed cut off of the Canadian National into Long Lac and other railroad construction work.

W. L. Carr, of Woodstock, N.B., passed away recently from an attack of peritonitis in New York City where he was on a visit. He was 59 years of age and carried on large lumber operations at Carr Siding and Sherwin, N.B. He also held valuable timberlands in Carleton County. Mr. Carr was one of the best known and most influential residents of Woodstock and is survived by his wife.

A charter has been granted to the Frontenac Pulp & Lumber Co., with a capital stock of \$49,000 and head office in St. Evariste Station, Beauce County, Que. Among the incorporators are Sylvio Gendron, St. Evariste, and Jean Fournier, St. Ephrem, Que. The company have taken over the business of Messrs. Gendron & Fournier and are empowered to buy, sell and deal in all kinds of lumber, pulp, etc.

That \$2,000,000 had been spent last year in fire-fighting in his area, was the statement of E. T. Allen, Forest Economist of the Western Forestry and Conservation Committee, in a paper read by him recently at the conference of the Quebec Forest Protective Association held in Montreal. He asserted that if but two per cent of this amount had been allowed him for advertising, the benefits would have been incalculable.

J. W. Brankley, of the Miramichi Lumber Co., Chatham, N.B., who was ill for the last month, was sufficiently recovered to attend the annual convention of the C.L.A. in Montreal. Mr. and Mrs. Brankley have gone to Florida where they will spend the next few weeks. He is president of the New Brunswick Lumbermen's Association and hopes to return in time for the annual meeting which will be held toward the latter part of March.

H. E. Howe, lumberman, of Shawinigan Falls, Que., states that in that district operators, both big and small, are cutting a large quantity of logs and the outlook is regarded as bright. The small mills will make a big cut as they are busy in the bush. The recent rise in prices has encouraged them considerably. Some of the pulp and paper companies will not operate their sawmills this season owing to the activity in pulp and newsprint, for which there is a decidedly strong demand.

Canadian Western Lumber Co., Ltd., of Fraser Mills, B. C., in its report of November operation, shows a considerable improvement in both production and sales in comparison with November, 1921. Lumber manufactured, at 8,314,040 feet, compares with 5,947,241; lumber sold, 7,993,326 feet, as against 5,142,006, and price realized at \$220,148, compared with \$129,279. Aggregate lumber manufactured from January 1 to November 30 totalled 108,850,689, compared with 81,083,568 feet, and aggregate price realized at \$2,625,018, compared with \$2,119,881, an increase of \$505,137.

The Carew interests of Lindsay have bought the Malloy & Bryans mill at Haliburton, Ont. The new company has secured a charter and will be known as the Haliburton Lumber Co. with head office in Lindsay. F. J. Carew, of Lindsay, is president, John Carew, vice-president, and A. W. Carew, sec.-treas. The new company not only acquired the sawmill of Malloy & Bryans but also the stave mill and horses, waggon, harness, equipment, steamboats, limits and logs on hand. There are now some 40 men in camp at Haliburton, Ont., and a busy season is predicted.

The discussion of forest supervision measures to be adopted next year, with a view to reducing to a minimum the possibility of a recurrence of last year's Northern Ontario holocaust, was the purpose which summoned the forest engineers of the province into consultation with Crown officials recently at the Parliament Buildings, Toronto. The methods which the Government intends to adopt involve the extension of the aircraft patrol system, which was so successful last year in the Georgian Bay district, and the more general use of lookout towers and telephone connections. Measures of reforestation were also discussed at the conference.

The Department of Lands and Forests of the Ontario Government has accepted the tender of Charles Mellor of Port Arthur for timber or township seven and part of six lying east of the Canadian Pacific Railway main line, near James Station, on the Grand Trunk. The tract is said to contain an area of 36 square miles, and its location is approximately 70 miles west of this city. Under the terms of the tender, Mr. Mellor is to pay the following price for the timber cut: Pine, \$9.50 per thousand feet board measure; \$6 per thousand for spruce and poplar; \$4.50 per thousand for other timber. Ties are rated at 22 cents each; spruce and pulpwood, \$2.67 per cord, and other pulp, \$1.47. Fuel wood is rated at 30 cents per cord.

## Mr. Maus Starts New Organization

Charles O. Maus, Sound Bend, Ind.

Charles O. Maus, of South Bend, Ind., recently dissolved his partnership with R. B. Maxson in the Charles O. Maus Lumber Co., and has started a wholesale hardwood lumber business under the name and style of Charles O. Maus. His offices are in rooms 444 and 446 Farmers Trust Building, South Bend, and he will specialize in northern and southern hardwoods, his specialty being Canadian birch. Mr. Maus was recently in Toronto and appointed Mr. Walter S. McBean, 200 St. Clarens Ave., Toronto, as his Canadian representative. Mr. McBean has had considerable experience in the hardwood line, being for some time associated with McBean & Verrall, and latterly with the Seaman, Kent Co., Toronto. He is a son of John McBean, lumberman of Toronto.

Mr. Maus is well-known to the Canadian trade and has a wide connection. He is a brother of Harry H. Maus, who was recently elected president of the South Bend Hardwood Club and has paid frequent visits to Canada. Mr. Maus is a member of the National Hardwood Lumbermen's Association; the Indiana Hardwood Lumbermen's Association; South Bend Hardwood Club and various other bodies. The slogan of the new firm is "We have it and 'How about that next car?'"

Mr. Maus has had twenty-three years' experience in the lumber arena in the manufacturing, buying and selling ends and was for several years with the Hyde Lumber Co., of South Bend, calling upon the buying trade in Ontario, Ohio, Michigan, Pennsylvania and New York States.

## Spanish River Company in Strong Position

At the seventh annual banquet of the Spanish River Pulp & Paper Co., held on January 20th at Sault Ste. Marie, Ont., the recent timber probe in Ontario was touched upon by a number of officials, who all expressed satisfaction that the company had emerged from the investigation in a considerably stronger position than when it was drawn into it. A splendid address was made by President George Mead, of Dayton, Ohio, dealing with the past operations of the concern, its bright future and the very satisfactory conditions existing between the company and its employees. Addresses were also delivered by Colonel Thomas Gibson, Toronto, Vice-President; Colonel C. H. L. Jones, General Manager; George R. Gray, Manager of wood operations; Hon. Dr. R. J. Manion, M.P. for Fort William, and P. B. Wilson, Vice-President and former President of the Canadian Pulp and Paper Association.

## Mr. Nichols is Once More Returned

W. A. Nichols, who is a widely-known lumberman of Carleton Place, Ont., was re-elected Reeve of that town by acclamation in the recent returns. He has also been elected warden of Lanark County.

Mr. Nichols is a public-spirited citizen and some years ago was Mayor of Carleton Place. He was first made Reeve in 1915 and his municipal experience well qualifies him for looking after the interests and welfare of the citizens among whom he is highly regarded. He has lived in Carleton Place all his life and runs a sawmill with a cutting capacity of 12,000 feet a day and a woodworking plant which specializes in mouldings, fancy inside finish, etc.

## Keenan Allied Industries at Owen Sound

A Toronto paper recently published an illustrated edition of Owen Sound, in its reconstruction and educational review of the fast-growing cities and towns of Ontario. Special reference was made to the activities of Keenan Bros., the Keenan Towing Co., the Keenan Woodenware Mfg. Co. and the Eureka Refrigerator Co., all of which are controlled by Keenan Bros.

Illustrations were presented of the different plants, and in reference to the sawmill activities of Keenan Bros., it is stated that their mill on Georgian Bay saws logs, ties and lumber from the surrounding country as well as from other points on the Georgian Bay and from points on the North shore as far north as Lake Superior. The

mill contains one 12-inch double cutting band saw and one 10-inch horizontal resaw with a daily capacity of 50,000 feet of hardwood, or 75,000 feet of pine. The average season is from the 1st of April till the end of October. It is announced that the firm specializes in wood products from the stump to the finished articles in the hands of the consumer.

The Keenan Towing Co., Limited, have a tug known at the "Keenan," and two barges. Large loads of hardwood logs are brought down by this means which has proved economical and efficient. Owen Sound is thus put on the map as a milling centre for hardwood lumber long after adjacent territory has been stripped, many logs being brought down from Manitoulin Island on the North shore.

## Company Has Been Paying Up Timber Dues

At the Department of Lands and Forests in Quebec the Riordon Company is now reported to be in an excellent financial situation as compared with a year ago. Less than 12 months ago the firm owed dues to the department which was said to reach \$127,000, which was guaranteed by notes. These notes were renewed a few times, and now it is learned authoritatively that they only amount to a total of \$50,000, due to partial payments. The company has been paying new dues in cash. The activity reigning in the lumber business since a few months is credited for that improvement in the financial condition of the company.

## Breezy Jottings of Trade Interest

Preliminary plans are being drawn for a \$7,000,000 power development at Rivieres Des Prairies, Que., by the Back River Power Co., 35 Common St., Montreal.

John Fenderson & Co., Inc. Sayabec, Que., are installing a complete A-7 hardwood flooring outfit. The high quality finish and fine uniformity make the products of the A-7 patented hardwood flooring machine most desirable. The Fenderson Co. are also installing a twin vertical resaw. The equipment was purchased from the P. B. Yates Machine Co., Ltd., Hamilton, Ont.

The eighth annual meeting of the Southern Pine Association will be held at the Hotel Grunewald, New Orleans, La., on March 20th and 21st. The annual convention of the National Lumber Manufacturers Association will also be held in New Orleans on March 22nd and 23rd. Another convention of interest to Canadians will be the twenty-sixth annual session of the National Hardwood Lumber Association which will convene at the Hotel Congress, Chicago, on June 14th and 15th.

John Ford, aged 83, veteran paper maker, died recently at Owl's Head, N.Y. from an attack of pneumonia. He came to Canada from England in 1859 and entered the employ of the Riordon Paper Co., of St. Catharines and was afterwards their first foreman. Later he managed the mills of J. C. Wilson, Limited, at Lachute, Que. and in Holyoke, Mass., and in New Hampshire. For 13 years he superintended the pulp mill operated by the Malone Paper Co. at Chasm Falls, N.Y., retiring at the age of 76.

Pulp board in rolls for use in the manufacture of wallboard will henceforth, by virtue of an order-in-council be subject to the following reduced duty, namely: British preferential tariff, free; intermediate and general tariff, five per cent. ad valorem. At present pulp board does not appear in the customs tariff as a specific item but, is classified under pulp of wood or straw, is liable to import duties of 15 per cent. preferential and twenty-five per cent. intermediate and general.

Construction has been completed on the new big mill of the Provincial Paper Mills Co. at Port Arthur, Ont., and the work was completed in record time. The installation of equipment is now going on in all departments. The new mill will be particularly well equipped and construction was carried out under the direction of W. J. Trimble, of Toronto, who was the general contractor. H. S. Taylor Limited, of Montreal, had charge of the engineering designs and supervision of construction. A. G. Ponsford is general-manager of the mill.

The Spruce Falls Company's sulphite pulp plant at Kapuskasing, Ont., which was recently visited by fire, has resumed operations on a reduced basis. F. J. Sensenbrenner, president of the company, says the property loss did not prove to be as serious nor the interruption to operation as long as was feared from the first reports. The company will be obliged to continue to run on a reduced basis until the roof of the digester building is restored. So far as camp operations are concerned, winter conditions are quite favorable for pulpwood production equal to the expectations of the company who are securing all their supplies through jobbers.

## Enjoyable Evening With the Linn Tractor

Mussens, Limited, of Montreal, who handle the widely known Linn tractor in Canada, entertained a group of lumber operators and pulp and paper producers at a delightful dinner at the Mount Royal Hotel, on January 24th, during the progress of the C.L.A. convention. There were a large number present and the proceedings passed off pleasantly, the function being attractive and enjoyable in every respect. W. H. C. Mussen, the genial president of the organization, presided and was ably assisted by his right-hand man, J. S. Innes, who is in charge of the logging department. H. H. Linn, vice-president of the company, was prevented from being present owing to the death of his mother, and during the evening a telegram of condolence was sent. Others who gathered around the festive board were,—G. R. Hanks, of Morris, N. Y., president of the Linn Tractor company; George Whitman, of Morris, N. Y.; R. G. Thatch, of New York, secretary; W. C. Hull, president of the Oval Wood Dish Co.; W. S. Weldon, Collector of Customs, Montreal, and many representative lumber and pulp and paper exponents.

During the evening rollicking songs and sketches were given by Fred Brown, who is favorably regarded in Montreal engineering circles, "Joe" Beauchamp, W. S. Weldon and others. Splendid moving pictures were presented showing the Linn logging tractor in operation under various trying conditions and demonstrating its dependability and great hauling power. It was seen drawing immense compressor castings weighing 65,000 lbs. each for the Hope Natural Gas Co., of Clarksburg, W. Va., where a compressor station was being erected. The distance was 19 miles and the roads were apparently impassable owing to the depth of snow and slush, while the grades were very steep and the curves exceedingly sharp.

Other pictorial revelations showing how effective the Linn tractor is on snow and ice and exemplifying the flexibility of the traction, working overground without use of mud-hooks, etc. were witnessed in connection with hardwood for the Oval Wood Dish Co. at Tupper Lake, N. Y., and the Gould Paper Co. in its activities at North Lake, N. Y. The latter company has twelve Linn machines engaged in its pulpwood operations. Several loads of hardwood logs were pulled by the Linn tractor at Tupper Lake, each containing 9,000 ft, Doyle rule. Several of the moving pictures were taken without knowledge of the Linn Mfg. Co., so that no stunts had been "prepared" or "staged."

At the close of the entertainment Mr. Mussen expressed his pleasure at the large number who had accepted the invitation to be present at the dinner. He spoke enthusiastically of the work and worth of the Linn tractor and enlarged upon its economic, reliable, flexible and other well balanced features in connection with winter logging, proving that tractor logging makes the long haul profitable and also makes it possible to drive only the main rivers and streams. A number of Linn tractors are now in operation in various parts of Ontario, Quebec and New Brunswick, and anyone interested was cordially invited to witness a demonstration of what the machine can do.

A hearty vote of thanks was tendered Mr. Mussen, and Mr. Innes for their hospitality, the mover being Cyril T. Young, manager of the Eastern Lands Department of the Canadian National Railways, who voiced the sentiments of all present in a few appropriate remarks. The gathering broke up with hearty cheers for Mussens, Limited.

## Montreal Dealers Discuss Trade Relations

The relations between wholesalers and retailers was the main subject for discussion at the meeting of the Montreal Retail Lumber Association held on January 23rd at Freeman's Hotel. The speeches were characterized by a desire to get into touch with the wholesalers and to arrange with them questions which were of mutual interest. It was asserted that there were some matters which, from the retailers' point, should be adjusted as soon as possible, particularly the one relating to wholesalers encroaching on the retailers' trade. Such matters could be settled in a spirit of goodwill.

The discussion was taken part in by Messrs. S. Rutherford, G. Lebel, J. E. Pare, Z. Sylvain, W. H. Thomson and the chairman, Mr. J. P. Dupuis. It opened with a reading of a section of the by-laws of the Ontario Retailers' Association relating to sales by wholesalers to consumers. Mr. S. Rutherford then made the suggestion that the retailers should work in co-operation with the Montreal Wholesale Lumber Dealers' Association, in order to arrive at some working plan on the lines of those adopted in Ontario. He referred to the sales tax, which in some instances was passed on to the retailer by the manufacturer. This was illegal. Perhaps a meeting of the wholesalers and retailers would result in the drawing up of a list of customers such as the railways and other large industrial concerns, to whom the wholesalers could sell.

A considerable amount of discussion followed as to what constituted a wholesaler and a retailer, and as to the eligibility of firms

doing both classes of trade to become members of the Association. Where was the line to be drawn? To some wholesalers the doing of a retail trade was not attractive, as they did not want to take the risks.

The chairman was in favor of appointing a committee to meet the wholesalers in order to get a definite declaration as to what constitutes a wholesaler. There was no doubt, he added, that some wholesalers were selling retail.

After some further discussion, in which emphasis was laid on the importance of cordial relations between both sections of the trade, it was proposed by Mr. Lebel, seconded by Mr. Sylvain, that J. P. Dupuis, S. Rutherford, W. H. Thomson, J. A. Bonneau and J. Laurence be appointed to meet the Montreal Wholesale Lumber Dealers' Association, with a view to defining what constitutes a wholesaler, and also to discuss other matters of interest.

The next meeting of the association will be held on February 7, when a president, vice-president, and five directors will be elected.

## The Old Timber Boundary Holds Good

In 1840, when country between the Petawawa and the Bonnechere rivers was parcelled into limits for pioneer lumbermen, the back areas were not much considered. Wood along the rivers was cut and the rest left. With the increase in the value of lumber the exact boundaries have become important.

In 1914, J. R. Booth, of Ottawa, cut over what he thought to be part of his back area. Four and a half square miles of the area cut was claimed by the Golden Lake Lumber Co. to lie within its boundaries. Two million feet were cut by the Booth employees, and the Golden Lake Company sued to recover at the rate of \$20 a thousand feet, endorsing its claim for \$40,000. Testimony at the trial was to the effect that it was worth \$80 per thousand, which would bring the value up to \$160,000.

J. R. Booth relied on a line run by a surveyor named Robertson in 1844. The other company relied on a line placed on a township survey map subsequently.

Mr. Justice Middleton holds that the Golden Lake Company is out of court because when the timber was cut in 1914, by an oversight no license had been issued to it for its limits. The claim of the Attorney General of Ontario, who was joined with the Golden Lake Company as a plaintiff, is also dismissed on the ground that the Robertson line was run by a Department surveyor as the boundary line of the limits. By reason of renewal of the license from year to year this line must be taken to have remained the boundary, even though the license are but for one year and each license is a new transaction.

## New Lumber Company Opens Offices

J. H. Poulin, who recently resigned his position as general-manager of the Rimouski Lumber Co., of Rimouski, Que., has completed the organization of the J. H. Poulin Lumber Co., Limited, with headquarters in Montreal. The company is obtaining a federal charter. Mr. Poulin, who has been in the lumber line all his life, states that the new company will begin operations this month on the old hunting grounds of Quebec, New Brunswick and the New England States, and already has several choice cuts of spruce lumber.

Offices have been opened at Room 85, 205 St. James St., in the Bank of Montreal Bldg., Montreal. Associated with Mr. Poulin will be J. P. Fitzpatrick, president of the National Securities, Montreal.

## Want Fire Rangers for the Year Around

The chief fire rangers in the North should be all-the-year-round men, and they should have power to hire assistants as early in the season as they deem necessary, and retain them as long as is considered advisable, according to views expressed at the quarterly meeting of the Associated Boards of Trade, in South Porcupine, Ont.

A resolution to this effect is being forwarded to the department, it being felt that these decisions should not be left to "some swivel-chair-man in Toronto," as one delegate phrased it. The contention was made that the costs of fire-ranging amounted to one cent per square mile only, and that of \$630,000 voted for this work less than a quarter of a million was actually devoted to field work, the balance being used largely for overhead and Toronto salaries.

The Devon Lumber Co., Limited, lumber manufacturers, whose head office is at Sherbrooke, Que., is in process of winding up its affairs having disposed of its mill some time ago. The company is cleaning up the balance of the lumber on hand, which it expects to accomplish in the near future. The mill of the company is located at Pine, Ont. F. N. McCrea, M.P., of Sherbrooke, is the president of the Devon Lumber Co., G. F. Hodgins, of Ottawa, vice-president, and Frank C. Baker, of Sherbrooke, sec.-treas.

## Mr. Plant Becomes Eastern Manager

Ralph S. Plant, Toronto

Ralph S. Plant has been appointed manager of the Eastern sales office of the Vancouver Lumber Co., of Vancouver, succeeding K. M. Brown, who resigned recently to become sales manager for the A. E. Gordon Lumber Co. Mr. Plant has been associated with the Toronto office for the last two and a half years, covering Western Ontario, and has made many friends in the trade. He is a son of the late Eugene Plant, Inspector of Bakeries, Vancouver, where he attended school and secured his first job as office boy for the Vancouver Lumber Co. in 1917. He was next promoted to invoice clerk. And later joined the Royal Air Force qualifying as a flight-lieutenant.

After the signing of the Armistice, he resumed his connection with the lumber industry and gained further experience in the planing mill, tally and office departments until he came to Toronto in 1920 to assist Mr. Brown. He is a brother of Charles Plant, of Vancouver, sales manager of the company, and is alert and aggressive in the interests of his firm.

P. C. Thomas, who has been in Toronto for a year, being a member of the sales force of the Vancouver Lumber Co., has been transferred to the Winnipeg office where he has been appointed manager. He has been seven years in the employ of the organization of which his father, L. C. Thomas, is secretary. He is succeeded in Toronto by Harry C. Hodgson who for a long period was in the Winnipeg branch. Messrs. Plant and Hodgson will now have charge of Eastern sales for the company.

## Must Pay Higher Rates for Timber

New regulations passed by order-in-council in respect to timber have reached the Dominion land office at Edmonton. These refer to small fringes of timber which lie outside the surveyed berths, and which it has not been the custom to survey. Formerly these were sold to the adjoining berth holders at fifty per cent more than the regular dues on the timber held by them, provided the amount of timber were not over 300,000 feet board measure.

Under the new ruling this fringe timber will be disposed of to the berth holders at the ordinary rate, while the maximum cut is set down at 500,000 feet.

## Says Prices Have Advanced Considerably

The name of the R. A. R. Allen Lumber Co., of Millbridge, Ont., has been changed to the Allen Lumber Co., and the members of the firm are R. A. R. Allen, T. A. Yong and E. R. Allen. The company, who conduct operations in Hastings County, say they are receiving many inquiries for this time of the year, but are making all their sales by bringing their lists to the buyers. They have been disposing of cars of mixed sizes which would have been impossible to sell three months ago and at values which are quite satisfactory. Prices 25% in advance of last July are being offered cheerfully and short terms are being promptly honored.

The Allen Lumber Co. say that operating conditions are by no means ideal, there being no water in the swamps but more snow than usual. They are of the opinion that there will be an increase in production over last year of 35 to 40% and so far as their own operations are concerned, they are taking out half a million feet, mostly hardwood, and in addition will control another mixed million and a half scattered throughout Hastings County at seven or eight mills.

## Lumberman Who Possesses Public Spirit

G. H. Nicholson, of Burlington, Ont., who is widely-known in the lumber industry, was returned as Deputy Reeve of that town by acclamation at the recent election. This makes his second venture in municipal life after an interval of only a few years. He served two years in the Council and one as Reeve a short time ago. Previous to taking up his residence in Burlington, Mr. Nicholson spent six years as a township father in East Flamboro, the last two of which he filled the chair as Reeve.

From his boyhood days Mr. Nicholson, who possesses public spirit and is a good citizen, has been engaged in the lumber business and for twenty-five years has operated sawmills in Wentworth and

Halton Counties. At present he has a mill cutting hemlock and hardwood at Deer Lake in the Parry Sound District. He also operates another mill near Guelph Junction, in Halton County, which is sawing pine and hardwood.

Since 1913 Mr. Nicholson has been engaged in the export trade in association with the Bradley Company, of Hamilton. They have been exporting chiefly oak, elm and hard maple, both hewn in the round and sawn, to Great Britain and Ireland, and before the war to other points in Europe. In buying for this trade, Mr. Nicholson has travelled through and examined a large part of the standing timber in old Ontario.

## Mr. Long Re-elected as Commissioner

Guy H. Long, of the Long Lumber Co., Hamilton, wholesale lumber dealers, and the Consumer's Lumber Co., retail lumber dealers, was recently re-elected as Hydro Commissioner for that city. It was in 1921 that Mr. Long was first chosen for the position, and in the late contest which was a triangular one, he polled a larger vote than the total number of ballots cast for his two opponents. This demonstrates that Mr. Long's services has been highly acceptable to the citizens and that he has discharged his duties faithfully and fearlessly.

Mr. Long is well-known in the lumber industry with which he has been associated many years. He is one of the charter members of the Wholesale Lumber Dealers' Association, Inc., and is a former director of that body. He has held a number of public positions and to whatever he turns his hand, he brings optimism and encouragement. An ardent hunter and fisherman he takes much interest in athletics, motoring, and other pastimes.

## Mr. Maxson Buys Out Partner Interest

Ray B. Maxson, of South Bend, Ind., has purchased the interests of the Charles O. Maus Lumber Co., and has taken over the assets and assumed the liabilities of the firm. Mr. Maxson was in Toronto recently on business and reports the prospects for trade during the coming season as exceptionally bright. His firm is specializing in oak, gum, birch and other hardwoods.

Mr. Maxson was for several years lumber buyer for the Studebaker Corporation of South Bend, and has had an extensive business acquaintance which has given him a wide connection in the lumber arena.

## Penetang Company is Kept on the Move

The P. Payette Co., Penetanguishene, Ont., of which J. T. Payette is the proprietor, say that since the war they have not been as busy as at the present time and they are running to 100% capacity. Mr. Payette adds,—"We have a great deal of marine work and also sawmill work; in fact we might state that the sawmill machinery business looks extra bright for 1923. We are selling quite a number of lath mills and bolters and sawmill carriages and have the factory almost filled up with sawmill repairs. We certainly have to thank the "Canada Lumberman" for keeping us before the sawmill owners of the country."

## Mr. Mann is Buying up Lumber Stocks

E. H. Mann, of Peterboro, who sold out his sawmill interests some time ago to S. L. Purdy, of Coe Hill, spent a few days in Toronto recently on business. Mr. Mann is now devoting his time largely to buying hardwood stocks for Toronto wholesale concerns and will also do some taking out of timber on his own account. The Mann mill at Peterboro will be operated during the coming summer by Walter Purdy, son of S. L. Purdy, and it is expected that the cut will be over a million feet, of which a large proportion will be hardwood.

Mr. Mann reports that the lumber cut in Peterboro County will be considerably larger than it was last season and that twenty-five or thirty mills, stationary and rotary, will be in operation within a radius of a few miles.

## Toronto Firm Shipping Out Pulpwood

The Thompson & Heyland Lumber Co., Toronto, held its annual meeting recently and re-elected James Thompson, president and A. E. Breckenridge secretary-treasurer. A. J. Bailey, who was formerly secretary-treasurer, was made vice-president, succeeding the late E. R. Heyland.

The company deals in not only lumber but pulpwood and will handle between 40,000 and 50,000 cords during the coming season. Already between 15,000 and 20,000 cords of pulpwood have been shipped out from Northern Ontario points to the Thorold district, Minnesota, New York, Pennsylvania and other states on 1923 contracts. The company report quite a lively call for polpar.

## Ottawa Valley Lumberman Expires

The late W. C. Hughson, Ottawa

An outstanding figure in the ranks of the lumbermen in the Ottawa and Gatineau Valley district joined the silent majority lately in the person of Ward Campbell Hughson, president of Gilmour & Hughson, Limited, Hull, Que. Mr. Hughson, who was in his 66th year, had been ailing for some time, and passed away at his home, 71 Bronson Ave., Ottawa. He was held in high regard by a large circle of friends and business acquaintances and is survived by his widow, two daughters and two sons. In addition to his active interests in the firm of Gilmour & Hughson, he was a director of the Ottawa River Forest Protective Association of which he was president for four years. He was also a member of the directorate of the Lower Ottawa Boom Co. for twenty-seven years, and was head of that organization for nineteen years, as well as president of W. C. Hughson & Sons, Limited. Mr. Hughson was born in Albany, N.Y., and was the son of a well-known lumberman, who was head of the firm of Hughson & Co., of Albany.

The late Mr. Hughson received his business training under his father and came to Canada in the eighties and was engaged for a time in the lumber line in Peterboro. He was later manager of the Muskoka Mills and Lumber Company, near Penetanguishene, Ont., was associated in business with Mr. A. S. Campbell, of Toronto, and later took up residence in Ottawa as the representative of Hughson & Co., of Albany. The firm of Gilmour & Hughson Company, Limited, was formed in 1891, with the late John Gilmour as president. On the death of Mr. Gilmour in 1912, Mr. Hughson succeeded to the presidency of the firm, henceforth known as Gilmour and Hughson, Limited, of Hull, and retained this office ever since. Three years ago, the firm entered into and made agreement of sale with the Riordon Corporation. Mr. Hughson had resided continuously in Ottawa since 1890, and although born in Albany, was a naturalized British subject.

## Mr. Ainslie Passes Away at Owen Sound

One of the pioneer lumbermen of Northern Ontario in the person of John George Ainslie, passed away lately in Owen Sound in his 65th year. He was raised at Leith, a few miles out of the city and spent his whole life in the district. Mr. Ainslie had been ailing for some time and had been confined to the house for the past two months with pernicious anaemia. He was the last surviving member of Rixon, Ainslie & Stoddart, which succeeded Maitland & Rixon, and for several decades looked after their bush operations. The mill of Rixon, Ainslie & Stoddart was in operation for about twenty years and sawed from 8,000,000 to 10,000,000 feet of white and red pine a season. It has been closed about five years and was sold several months ago to Keenan Bros. of Owen Sound, Rixon, Ainslie & Stoddart retaining certain limits.

Mr. Ainslie was never married and leaves four nieces and two nephews to mourn his loss. He was an ardent athlete in his younger days, playing with the cricket team of Owen Sound and winning the local championship in sculling contests.

The funeral of Mr. Ainslie was largely attended, H. Mawson and S. R. Anderson, of the firm of Anderson, Shreiner & Mawson, Toronto, were among the many who assembled to pay their last tribute of respect to a pioneer lumberman and a loyal, faithful citizen of Owen Sound.

## Another Veteran Lumberman Called Home

George Benjamin Campbell, ex M.P.P., passed away recently at Bruce Mines, District of Algoma, Ont. He was the manager of the Fraser-Bryson Lumber Company's interests and was born in Eardley, Que., some seventy years ago. Mr. Campbell who was a former member of the Quebec Legislature for Pontiac County was a staunch Conservative, and in the last general election was a contestant for the Federal parliament in the same constituency, but was defeated. In addition to his widow, Mr. Campbell is survived by three sons, Percy A., of Campbell's Bay, George Kenneth and Reginald Fraser of Eardley.

Mr. Campbell was known as one of the most expert lumbermen in the Ottawa Valley. He also took an active interest in Masonry,

being a 32nd degree Mason. In business, political and fraternal circles he was highly esteemed, and many lumbermen took occasion to pay their last respects to him on the occasion of his funeral interment being in Quyon cemetery. The last sad rites were largely attended, the funeral being the most widely attended of any in the history of Pontiac County.

## Mr. P. D. Gordon Crosses the Bourne

The death of Phillip Doddridge Gordon, of Mason, Gordon and Company, Limited, Montreal, on January 16, is a distinct loss to the Western and Eastern lumber trade of Canada. He was ill for three weeks. Mr. Gordon was removed to the Royal Victoria Hospital on Christmas Day and was immediately operated on; a second operation was performed on January 6, and from that day he gradually sank, the doctors stating that there was no chance of a recovery.

Born in Manila, Ont., 63 years ago, Mr. Gordon learned the lumber trade in Ontario. He went to Montreal in 1895 where he represented the British Columbia Mills Timber and Trading Company, of Vancouver, B. C. He was in fact one of the pioneers of Western forest products in Eastern Canada. He declared that it was very uphill work for a long time, many prejudices having to be overcome, but the fact that B. C. could supply the largest sized timber at very low figures proved strong inducements to try the products, and to see whether the qualities were as claimed.

In 1900 Mr. Gordon entered into partnership with Mr. William T. Mason, under the name of Mason, Gordon and Company. They specialized in B. C. wood products, yellow pine and hardwoods. The company continued to represent the British Columbia Mills Timber & Trading Company for fir finish in the province of Quebec and the Maritime provinces, a relation which has lasted until the present day. The trade in Western woods developed in a striking way, with Mr. Gordon and Mr. Mason playing a conspicuous part in that expansion. In 1905 offices were opened in Vancouver, which are now under the management of Mr. Hubert C. Gordon, the late Mr. Gordon's oldest son.

Mr. Gordon was a likeable man. He held some decided opinions on trade and other matters, but he was able to adduce some strong reasons for the faith that was in him. He frowned upon anything which savoured of the unfair in business methods, and to use the words of an acquaintance was a "clean man." A believer in the trade association idea, he took a full share in the work of the Canadian Lumbermen's Association and in the Montreal Lumber Association. He was vice-president of the latter body in 1914, 1915, 1916, and 1917, and president in 1918 and 1919; for two years he was president of the committee of management of the Transportation Bureau of the Montreal Board of Trade, and president in 1921.

Apart from business, his chief activity was in connection with Freemasonry, being member of a number of lodges in Canada and the United States and holding high offices in the order. He took a particular interest in the work of the Shriners, and was chairman of the Laws Committee of the Imperial Council of the Mystic Shrine; he also held other positions in the Order.

Mr. Gordon is survived by a widow and two sons and four daughters. Messages of regret from all over Canada have been received by the family. At the weekly luncheon of the Montreal Wholesale Lumber Dealers' Association on January 17, on the motion of Mr. Filion, seconded by Mr. Fenton, it was unanimously decided to send a message of sympathy with Mrs. Gordon and the family, and to lay a wreath on the grave.

## Sudden Death of Charles Carew

Charles Carew, son of John Carew, ex-M.P.P., and brother of Mayor Frank J. Carew and Arthur Carew, of Lindsay, Ont., all of whom are widely-known in the lumber industry, died recently in that town at the age of 26 years, after two days' illness from leakage of the heart. Charles was a noted hockey player, a member of several fraternal organizations, as well as the Rotary Club, and popular with a vast circle. For some years he had been associated with the John Carew Lumber Co. The late Charles Carew was a young man who will be greatly missed by a wide circle of friends.

The late P. D. Gordon, Montreal

## Lumber Wanted

We are always in the market to buy Pulpwood and odd lots of lumber. P. O. Box 643, Montreal. 23-8

### Offers Wanted

for 2" and 3" Prime Hardrock Maple for English importers. State price and delivery. Box 104, Canada Lumberman, Toronto. 3-8

### Wanted to Buy

Cord wood, hard slabs, soft slabs, dry. State prices, quality, quantity, to Thomas Dunn Company, 406 Aylwin St., Montreal, Que. 3

### Wanted

Several carloads strictly first class round Birch Logs, 15" and up. Also, strictly first class Basswood Logs, 12" and up. Box 110, Canada Lumberman, Toronto. 3

### Lumber Wanted

A block of Mill Cull or Mill Run Jack Pine or Spruce. Also Jack Pine or Spruce, Mill run or No. 2 Lath for winter or spring delivery. The Elgie & Jarvis Lumber Co. Ltd., 18 Toronto St., Toronto. 3

### Lumber Wanted

Hard Maple, Birch and Red Oak Lumber, in carload lots, for immediate shipment, or will contract for your season's cut. Delivery when in shipping condition. Address reply Box 101, Canada Lumberman, Toronto. 3-6

### Wanted

To contract for one hundred thousand feet genuine Rock Elm for bending purposes. Cut 3/4" thick. Delivery next summer. No substitute will be accepted. Quote price to St. Marys Wood Specialty Co. Ltd., St. Marys, Ont. 3-6

### Here is the Place to Unload

Your old stock. We buy any kind of lumber cheap—long and short lengths 2 x 4 and wider. Shingles in any grade in carlot only. Laths any size in carlot. Finish lumber and flooring, pine, oak, birch and maple. Must be cheap for cash. H. Fitzgerald, 1462 Pingree Ave., Detroit, Mich. 24-5

### Lumber Wanted

100,000 ft. of 2" Maple.  
100,000 ft. of 2" Birch.  
100,000 ft. of 1 1/2" Birch.  
100,000 ft. of 1 1/4" Birch.

For shipment within 90 days. Send prices and description of your stock, to Box 102, Canada Lumberman, Toronto. 3-4

### Dry Hard Maple Wanted in Carload Lots

1 1/4" x 3" in lengths of 18", 27", 36", 45" etc.  
1 1/4" x 3 1/4" same lengths.  
1 1/4" x 2 1/2" x 49" (one half each size).

1" x 3 1/2" x 49"  
All to be free from defects.  
Will contract for mill cuts of hard maple to be sawn into these sizes after lumber is dry, shipment next summer and fall.

Box No. 989, Canada Lumberman, Toronto. 3-T-f.

## Lumber For Sale

### For Sale

Standing timber estimated 20 million feet, about 75% hardwood, with or without mill. Located in Northern Frontenac County, Ont. Apply Box 76, Canada Lumberman, Toronto. 2-7

### PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 25 cents per agate line (14 agate lines make one inch). \$3.50 per inch, each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements of "Wanted Employees" will be inserted at the rate of two cents a word, net. Cash must accompany the order. Minimum charge 50 cents.

Advertisements must be received not later than the 10th and 20th of each month to insure insertion in the subsequent issue.

### For Sale

Slack barrel and keg material by the carload. R. J. Miller, Blacklands, Siding, N.B. 3-14

### Timber for Sale

About 250 pieces mostly red pine and spruce 50' long, 5" to 8" at top end, suitable for piles. For further information write, Wm. Millar, Municipal Clerk, Pakenham, Ontario. 3

## Machinery Wanted

### Wanted

Alligator—steel or wood, in good condition. Give full description, for cash. Box 99, Canada Lumberman, Toronto. 3-6

### Wanted

1 Filer for Double cut 8" Band.  
1 Band Saw Filer.  
Season commences about April 15th. Reply to Haliburton Lumber Co., Lindsay, Ont. 3

## Machinery For Sale

### D. FLORENCE & SONS

Bethune St., Peterboro, Ont.

Dealers in Scrap Iron, Metals, Second Machinery, Pipes, etc. 2-24

### For Sale

H.R.T. Boilers.—Two 72" diam. by 18' 0" long. 119—3" tubes, good for 125 lbs. pressure. In first class condition. Gates Engineering Co. Ltd., 314 Notre Dame St. West, Montreal. 3-4

For Sale:—Used Belting, Rails, Blocks and Pulleys. Send us your Scrap Iron and Metal, etc. Highest market prices paid. A. Low and Company, 264 Simcoe St., Peterborough, Ontario. 1-24

### For Sale

Alligator, Rebuilt by West, Peachey & Sons in 1921. Side wheeler, in first-class condition. Apply Schroeder Mills & Timber Co., Pakesley, Ontario. 2-5

### Planer for Sale

No. 27 S. A. Woods 15" x 6" heavy Planer and Matcher, complete, in good running condition. Now running in New Brunswick. Price \$1,300.00 f.o.b. S. A. Woods Machine Co., Boston, Mass. 24-3

### For Sale

Cross Compound Inclined Condensing Engine 24" x 48" x 60" stroke, suitable for 150 lbs. pressure, with shafting and radial paddle wheels. All in first class condition.

The Upper Ottawa Improvement Co.,  
194 Middle Street,  
Ottawa, Ont. 24-4.

### For Sale

Having installed a large Scaper, we are offering our 30" Whitney Scaper complete with knife grinder and two blocks, in first class condition. Apply Hay & Co. Ltd., Woodstock, Ont. 3-4

### For Sale

or will exchange for lumber or a good surface planer—1 second hand 8" Moulder, 1 Eureka Smutter, 1 Power Corn Sheller, 14 Veneer Presses, about 250 ft., No. 101 Reliance Chain with attachments in A1 condition. Write for particulars. Three Villages Building Association, Ltd., Rock Island, Que. 3

### Wickes Gang

GANG: No. 12 Wickes Gang, 40" sash, 15" stroke, steam boiler rolls, front and back in two sections, feed and oscillation combined, 1908 model, and has been in use for five years. We furnish with this gang 11 rolls for cants and stock, one filing machine, and 4 sets of saws.

THE PEMBROKE LUMBER CO.,  
Pembroke, Ont. 1 T.f.

### Engines, Boilers, etc., for Sale

One "Williams" Upright Engine 6" x 6".  
One Upright Engine 5" x 6".  
Six return tubular boilers of following dimensions:—  
One "Butterfield" 72" x 14'-3 1/4" tube—3/8" shell.  
One "Polson" 64" x 14'-3 1/4" tube—1/2" shell.  
One "Doty" 60" x 15'-4" tube—1/2" shell.  
One "Doty" 60" x 15'-4" tube—1/2" shell.  
One "Doty" 60" x 14 1/2'-4" tube—1/2" shell.  
One "Inglis" 60" x 16'-3" tube—1/2" shell.  
One double acting "Northey" Fire Pump, 6" suction, 5" discharge, 14" steam cylinder, 8" water cylinder, 13" stroke, capacity 450 gallons per minute.  
One "Northey" feed pump 6 x 4 x 7" stroke, capacity 60 gallons per minute.  
One brass mill steam whistle.

For further particulars apply The Conger Lumber Co. Limited, Parry Sound, Ontario. 13-E.o.I.-T.f.

### Bird's-Eye Maple is Due to a Parasite

Woodmen and botanists have speculated for a century concerning the cause of those curious marks, known as "bird's-eyes," which occasionally adorn a board of maple wood. The woodsman was inclined to ascribe these marks to the activities of woodpeckers, while the guess of the botanist was that the "bird's-eyes" were the traces of dormant buds or shoots. Research into this subject at the Forest Products Laboratories of Canada (Dominion Forestry Branch) points to the conclusion that "bird's-eye" maple owes its curious and attractive appearance to the action of a minute parasitic fungus which lives in the growing tissues of the tree. If this conclusion is correct, the production of "bird's-eye" maple by artificial means does not appear to be outside the bounds of possibility.

### New Type of Ski is Developed

That the possibilities of the so-called laminated or built-up form of construction for wooden articles are as yet inadequately recognized is pointed out by the Forest Products Laboratories of Canada (Dominion Forestry Branch) Montreal, where investigations in this connection are now in progress. Where the article manufactured requires very high grade material, entirely free from defects, it is obviously easier to secure what is wanted in smaller rather than in larger pieces and the use of several small pieces instead of one large one makes for high quality as well as economy of material.

The laminated ski, recently developed at the Laboratories, is a most interesting example of this type of construction. The adhesive employed and the method of using it are of the first importance a special waterproof glue is used.

# Review of Current Trade Conditions

## Montreal Reports Dry Stocks Scarce and High

Business in Montreal is considerably more active than is usual at this period of the year. Wholesalers state that orders are coming in freely, the difficulty being that stocks of desirable lumber, especially spruce, are hard to secure, some firms have comparatively little to sell, especially of dry stocks. The tendency is distinctly towards a higher range of values, and one wholesaler who has just returned from a trip to the Maritime Provinces states that the manufacturers are talking of a substantial advance in prices.

There is a general feeling of confidence as to the course of trade during the next few months, provided always that prices are not forced up to such an extent that consumers will get out of the market. Undoubtedly the cost of camp operations this season has risen considerably, and that manufacturers will have to advance their prices for the new cut if they are to realise even a small profit on their production.

The demands for American account continues good, with inquiries on a large scale. Some firms have not yet been able to complete orders which have been on their books for a long time owing to the car situation.

Hardwoods are still in good request, and prices remain firm. Reports from the Province are to the effect that the cut of birch will be considerably larger than last year. Many cuts have been sold at substantial increases on last year's figures.

A fair amount is doing in B.C. forest products, but the recent heavy increases in prices are calculated to curtail business, as eastern buyers will switch to substitutes when the quotations are put up to heights which they regard as unreasonable.

In connection with the year's building programme, it is of interest to note that considerable progress is being made with the scheme for spreading construction over the twelve months instead of confining it to what is termed the building season. It is claimed that the present system results in contracts being let at a period when two or three of the best building months have passed, that builders' supplies had to be rushed during a comparatively short time, and that it disorganized employment, in that there was an abundance of work during a portion of the year and very little during the remainder. The result was that men were disinclined to learn trades subject to such fluctuations. The movement, which originated with the Builders' Exchange, is receiving the approval of many large corporations.

## Ottawa Prices Very Firm and Outlook Good

Previous expectations that the new year would show a good volume of business, were justified in the Ottawa lumber market during the closing period of January, when prices remained absolutely firm, and there was a goodly number of new orders received. In addition there were many inquiries, especially from American yards, which point toward further orders.

Taken all around with the exception of the operation of embargoes at American entry points, the situation of the market was unexpectedly good for the season of the year, and showed further promise for the future. The domestic demands were not very heavy, which had been anticipated. The cold weather and the finishing up of construction undertaken last year, were the chief factors contributing to the slackening of the domestic demand.

The immediate, and perhaps the chief concern of Ottawa Valley lumbermen, was the shipping question, due to the operation of the American embargoes. During the third week of the month Ottawa shippers reported that a permit from the American lines had to be secured for practically every shipment, even if it was only one car. The permits to operate through the embargoed points are issued by the American railroads, and are turned over to the Canadian lines, who in turn notify the local freight agent, as to how many cars are available, and how many can be got through.

The question of available stocks for early spring sales attracted some attention, as some wholesalers who are short of stocks began looking around to see what they could buy. In some circles it was thought that there would be another advance over the present prices, before the spring business sets in. In this connection it was reported that some of the local manufacturers had stopped selling and were holding some of these stocks for a further advance in prices.

Woods labor was reported to be only fair and in some instances was reported scarce. This was partly attributed to the recent falls

of snow which provided work for many of the unemployed in the cities where they apparently prefer to remain unemployed, than go out into the woods camps and work.

The general situation from the woods end, was however, very satisfactory and though reports are not yet in, it seems that the log output this season will be considerably increased over that of 1921-22.

Though no figures are yet available, it was estimated, that the sawmill cut of the Ottawa Valley mills during 1922 would be upwards of thirty per cent more than in 1921.

Conditions with the factories and woodworking plants remained the same.

## St. John Logging Costs are Going Up

Recent heavy snow storms demoralized the trade at St. John all along the Coast line of Southern New Brunswick, reaching inland about thirty-five miles. These caused the loggers to slow up in their yarding and in some cases men came out of the woods, refusing to work in the deep snow. This condition increases the expense of logging in the localities in which it exists, but as it does not extend all over New Brunswick, the effects inland will not be so bad as near the coast line sections. The expense of getting logs will be much higher than was anticipated. Man power, foodstuffs and horse feed have all made advances since early fall, and especially does this apply to wages. Taken all around, with the particularly hard winter conditions in Eastern Canada, logging will probably cost at least \$1.50 to \$2.00 per M more than was anticipated in the early fall.

The conditions of rail traffic have not improved to any great extent. A few days ago the embargo against St. John by the New Haven road was lifted. Just how long it will be kept off, remains to be seen. These embargoes are undoubtedly the cause of the deadness in the Boston market, and when the railways are open for traffic west of Boston, improved prices and demand will certainly follow.

The severe winter will hamper the loggers and will not allow of the proposed production of logs for lumber so that in all probability there will not be quite so much lumber as anticipated. Every operator was slow in getting into the woods and the weather has been against fast logging ever since they went in. Some of the small mills in this section are not able to get logs fast enough to keep them going.

Prices show very little change in either the American market or the English. Buyers from the American market are moving about, trying to buy ahead, but manufacturers are very well sold up and refuse to sell at prices offered which are lower than the markets for the future warrant. The English buyers yet hesitate to buy ahead, preferring to await developments on the continent. Until settled conditions arrive, no more purchasing ahead will be made, only a hand-to-mouth trading will take place.

Prices in the Irish market for spruce remain firm for good stocks and specifications.

Freights to Great Britain and Ireland remain unchanged at 70 shillings. No further reductions are obtainable and English buyers seem to expect future advances in freights. Exchange has still advanced which will be helpful to sellers. Local factory business and retail sales have been unimportant caused by the very severe storms since January 1st.

The lath market is weaker, laths being bought around \$4.50 on cars, St. John. The pulpwood trade is also reviving and wood is moving fairly well at better prices.

## Ontario Market for Lumber is Very Promising

Market conditions continue to be promising and orders are coming in freely. It is much easier to sell lumber at the present juncture than it is to procure supplies. The demand is keen in all quarters for Ontario softwoods, and prices are showing a tendency to advance, particularly in hemlock, spruce and in certain of the better grades of white pine. So far as dry stocks and shipping conditions are concerned, these are difficult to locate and most of those who have them, are holding on until they get their figure before parting with the goods.

Reports received from various parts of the province are of an encouraging character in that the weather conditions up to the time

View of Mills in Sarnia.

# BUY THE BEST

Retailers and woodworking establishments who like to get A1 NORWAY and WHITE PINE LUMBER always buy their stocks from us because we can ship them on quick notice. It pays to have the goods, but it pays better to "deliver" them.

We also make a specialty of heavy timbers cut to order any length up to 60 feet from Pine or B. C. Fir.

## Cleveland-Sarnia Sawmills Co., Limited

SARNIA, ONTARIO

B. P. BOLE, Pres.   F. H. GOFF, Vice-Pres.   E. C. BARRE, Gen. Mgr.   W. A. SAURWEIN, Ass't. Mgr.

of writing were almost ideal for bush activities and everything was proceeding on a satisfactory basis.

There is much speculation regarding the trend of prices, and many retailers are buying only sufficient for their spring requirements and not stocking up beyond what they will need for the early spring. There is no doubt some kinds of lumber is going to be quite scarce and higher in price until the new dry stock comes on the scene in June and July. What will happen then will depend very much upon whether the strength of the building situation continues, and just how operating conditions are at sawmill points. A leading wholesaler stated the other day that he was not afraid to buy dry stock at the present time at most any figure and get rid of it, or, for that matter, he would purchase anything which would be in good shipping condition before June. After that he added that he was taking no chances as there were several speculative elements which had to be contended with, such as the labor situation, the building outlook, the increased cut and overseas requisitions.

In the meantime, however, January proved to be a good month with most wholesalers, who report that the outlook is "every day in every way getting better and better." The chief concern is the source of supply rather than the location of customers. Prices continue firm and confidence is reflected on all sides.

In hardwoods there is a good requisition for 6/4 and 10/4 No. 1 common and better birch and maple, and one wholesaler reports that the low ends have been moving more freely than they were a few weeks ago. The car situation has improved a great deal. Prices are holding their own and there are many inquiries for stock. Farmers, portable sawmill men and others who did no cutting last winter, are taking out as many logs as they can during the present season which will add considerably to their supply. The great bulk of shipments in birch, maple, basswood, elm and ash is to the other side of the border; in fact, from 80% to 85% of all the stock sold during the past few months has been in the American market. The Canadian trade has not been buying to any appreciable extent beyond immediate requirements but it is expected that demand will reassert itself in the near future.

It is a little early yet to size up industrial conditions owing to the coal situation, the restlessness of labor in certain quarters, the European problem and other contingencies. On the whole, however, things are looking much better than last year at this period and another month should pretty well establish just what will take place in the industrial arena.

It may be said, however, that the lumber business to-day in Ontario, particularly in softwoods, is in good shape, both present and potentially. Advices from British Columbia are to the effect that few mills have much stock to sell at the present time in the East owing to the excessive demand from the United States, and there will be no large-sized lists from which to make selections until a month or six weeks. Prices have been stiffening on all grades on account of the overseas and American demand.

### The Lath Situation Away Down East

The present lath situation continues to attract the attention and the curiosity of the lumbermen throughout the province, and the question as to whether Uncle Sam is attempting to put over another pulpwood deal on our lumbermen is discussed on all sides, says the Campbellton, N. B. "Graphic." During the fall months very high prices were quoted for laths in the U. S. the result of a decision of the American fire underwriters insisting upon wooden laths being used in the construction of building, the steel ones having proved a menace in fire fighting. Very attractive prices were offered by American buyers on rather one sided contracts similar to the pulp contracts of a few years ago. The lath industry took on unusual activity, some of our mills making arrangements for an all winter cut. We learn now that an embargo has practically been placed on their transportation over American roads and last week a drop of 75 cents was announced followed by another drop of 25 cents to \$4.00. Building in the winter months is not active and with an overload market in April and May the embargo can easily be raised when the Yankees will probably dictate terms to our lumbermen. Let us hope that it is not too late to meet the situation and that even our friends across the border hold five aces they will find Jack Canuck ready to meet them.

### Quebec Timber Exporters Hope For Good Year

The advices received by the Quebec lumber export firms from their agents in the United Kingdom up to the latter part of January are not as bright as might be expected. This is due to the European political situation which seems more complex than ever since the signing of the Armistice in November 1918, on account of the non-settlement of the Near East conference, due to the inexorable at-

titude of the Turks and the French advance into the Ruhr, which has caused a feeling of uneasiness in the capitalistic interests of Great Britain. In the meantime it is surprising to observe the outward calm prevailing in England notwithstanding these chaotic political conditions.

The keenest observers among the United Kingdom agents of the Quebec lumber trade confess in their reports that they are at the present time not able to make a forecast. They say that from the middle of December up to the time of their writing early in January, until the fundamental question of German reparations are settled, no one can make any possible statement. They make it plain that, although the stocks are diminishing, importers depend upon the political situation to restore or diminish confidence, and for that reason the supplies of wood imported in 1923 will not be excessive except that the dark clouds, now obscuring the political horizon, roll by. They make clear in their reports that they do not wish to create a spirit of pessimism but to emphasize the situation as it appears to their vision and judgment.

These advices also point out that, while Great Britain is the only strong market in Europe due to political complications, the feeling is one of precaution in business circles and a strong disinclination to avoid risks which can only be avoided by the utmost caution.

In the meantime it is hoped with a feeling of confidence that the complex situation will change in the course of a month or six weeks, to assure a more decisive spirit of confidence that will remove the tension and will bring about a reaction to encourage and foster a spirit of normalcy.

### Shipments from Quebec in 1922

It will interest the readers of the "Canada Lumberman" to know that, according to statistics furnished by the Customs Department, the exports of planks and boards, square timbers and pulpwood shipped from the port of Quebec from the 1st of April to the end of December 1922, were as follows:—

Planks and boards, spruce,	M. Ft.	17,446	\$547,808
Planks and boards, pine,	M. Ft.	212	21,248
Planks and boards, other,	M. Ft.	3,099	133,639
Timber, square, hardwood,	M. Ft.	1,230	94,162
Timber, square, white pine,	M. Ft.	1,460	161,517
Pulpwood,	Cords	23,189	231,890

### How One Man Sizes up Production and Price

Speaking of conditions in Northern Ontario, a lumberman, who has visited various sections of the province all the way from the Ottawa Valley to the Sudbury district, says that operating conditions in the bush up to the time that he was speaking, the last week in January, have been remarkably good. The streams were frozen solid and there had not been too great a fall of snow. He estimates that the increase in the white pine cut in Northern Ontario this winter will be from 10 to 15% over last year and spruce from 5 to 10% with hemlock about the same proportion. He declares that the output of jack pine will show a decrease all the way from 25 to 50%. Comparatively few are taking out this class of wood this year on account of prices being too low, operators, in some cases not being able to get the cost of production out of the finished product. The supply of men at most points has been very good, but complaints are still heard regarding their efficiency.

There will be an increase in prices this year from \$2.00 to \$6.00 on white pine, so far as the box and better is concerned, and from \$5.00 to \$10.00 on good strips, good sides and No. 1, 2, and 3 cut.

The speaker said that he did not believe that producers would even with this advance make any great profit as operating conditions were more costly than last year, particularly from the wage end. No. 1 and No. 2 white pine culls were showing about \$4.00 advance over last year in the prices being asked by manufacturers for the 1923 cut. In hemlock there was not likely to be much call for No. 2 of which there was a surplus in the country. No. 1, however, was in brisk demand and some producers were asking as high as \$30.00 at the mill and \$25.00 to \$26.00 for merchantable. This is an advance of several dollars over last season.

This lumberman predicted that, spruce, culls out, would sell from \$30.00 to \$32.00, and jack pine \$1.00 to \$2.00 less. This is from \$2.00 to \$4.00 above the figures obtained last season, but it must be remembered that operating costs have been considerably higher. Norway pine, would, it is predicted, bring \$1.00 to \$2.00 over spruce.

"There is much speculation," concluded the speaker, regarding the output and prices for the coming season's cut, and I have only given you my ideas. They may not agree with those of other men who have been visiting the bush, but at any rate things look considerably better for a larger cut and heavier prices during 1923. No one however, wants to see a runaway market or undue advantage taken of the situation if a scarcity in certain widths and thicknesses looms up before the dry stock of 1923 gets into the hands of the retailers and wholesalers.

# THE LINN LOGGING TRACTOR

The Canadian Logger has evidenced his appreciation of the value of the Linn Logging Tractor for log haulage.

This winter the Linn Logging Tractors will be found operating as far East as Newfoundland and as far West as the Port Arthur District, and as far North as Cobalt.

It is our hope that every Canadian Logger will this winter avail himself of the opportunity to see Linn Logging Tractors in operation during the haul.

As Linn Logging Tractors will be in operation this winter within easy reach of every locality in Ontario, Quebec and Newfoundland, any operator will be able to see a Linn Logging Tractor operation without loss of much time from his own operation.

We will gladly supply any interested operators with the name of his nearest neighbor who is using Linn Equipment.

## Increasing Demand For Coast Products

Demand for British Columbia lumber in the markets of the world was never better. Such is the consensus of opinion of timber exporters, millmen and shippers, and the prediction is freely voiced that 1923 will be a banner year in the history of the industry in this province. Although prices have stiffened considerably during the past two months offerings are being received almost daily from the four quarters of the globe, Vancouver mills are booked for three months ahead and new business is showing for the spring and summer cutting. Following the higher prices for lumber the Japanese demand for cedar squares fell off for a few weeks recently, but it is strengthening and business in rapidly increasing volume is expected from that country. China is buying in greater quantities and is asking for railway ties and railway timbers, particularly for bridge building materials. General orders in parcel lots from China are improving and the Oriental republic is expected to consume a larger percentage of the lumber cut this year, than previously.

## Says All Lumber Buyers are Optimistic

George W. Jones, of Bancroft, Ont., who is a dealer in pulpwood and lumber supplies, states that, owing to considerable difficulty in securing satisfactory bush labor, his cut this season will, probably, not exceed 2,000,000 feet of hardwood and soft lumber. He adds that he will have quite a large production of winter-sawn basswood which he is now manufacturing with two portable mills. He is getting a high percentage of 5/4 clear white F.A.S. in the basswood. Continuing, Mr. Jones says:—"Present indications point to a healthy demand for lumber as I am receiving numerous inquiries by mail. I have also had quite a number of buyers, representing both Canadian and American wholesalers, call on me with a view to contracting for new stock. I may say that practically all of these buyers are optimistic as regards the future, and nearly everyone I have talked to, who is interested in the lumber business, feels that there are better days ahead of us this year. Last year, at this time, the market was practically dead, in this section at any rate. We received hardly any inquiries for stock and lumber buyers were conspicuous by their absence. In view of the healthy demand, and also in view of the fact that operating expenses are higher this year than they were last season, I am of the opinion that prices will substantially improve. Men for the lumber camps have been much harder to secure this year than they were last year, and we have been obliged to increase our wage scale for bush work by about thirty three and a third per cent over the 1922 scale. The only item which has been subject to any reduction is horse feed. It is slightly lower than last season. The total production this year in this section will be considerably larger than it was last, although not as heavy as it was two years ago. I would estimate the probable production of the entire tributary of the C.N. Ry., Trenton to Maynooth division, and the I. B. & O. Ry. as far west as Baptiste, at about twelve million feet."

## Lumber Cut in Ontario was Smaller

According to figures compiled by the Department of Lands and Forests, for Ontario, the total timber cut in the province up until the close of the fiscal year ending October 31, 1922, was much lighter than in 1921. During the period of 1922 over 309,000,000 board feet of lumber was taken from the forests of the province in addition to 289,113 cords of pulpwood.

The area covered by timber operators under license from Department at the end of the fiscal year was 17,289 square miles.

The quantities and variety of timber taken out is as follows: Pine saw logs, 242,832,684 board feet; other logs, 57,311,922 board feet. Boom and dimension logs taken out are as follows: Pine, 4,721,666 board feet; other logs, 2,266,461 board feet; pulpwood, 289,113 cords; railway ties, 1,755,419; cedar posts, 56,525.

Excepting the pulpwood, 309,234,790 board feet of timber were taken from the forest wealth of the province.

A decrease in the number of square miles under operation by timber men is noticed over last year. In 1921, 19,855 square miles were under cut, against the 17,289 miles of this year.

The cut of 1921 was much higher than this year, when in 1921, 408,873,408 board feet were taken out of the forests.

## Shipments of Quebec Pulpwood Slow Up

The shipment of pulpwood from the bases of supply in the district of Quebec to the American paper mills during the months of November and December was quite large in volume, especially in the latter month when there were plenty of cars to facilitate the demand. This demand towards the end of 1922 commenced to slow

up, and with the month of January ceased. The stoppage of shipments is due to the low condition of the rivers in connection with the American mills, especially in the State of New York, which has put an end to the demand for Quebec pulpwood, American buyers advising the dealers here that there is not sufficient water in the rivers in conjunction with the mills to allow grinding.

In consequence of these conditions the American mills are now buying ground wood pulp which has been shipped of late in large quantities from Scandinavian countries to the United States for which it is said the United States mill interests are paying \$40. per ton and upwards. Pulp which could be had last summer for \$22. to \$24. per ton, is now being sold at Quebec, f.o.b. \$35. per ton. This upward trend has naturally caused an increase in the price of newsprint for which there is a bigger demand than ever.

Quebec pulpwood dealers, who have been selling their wood, delivered at the mills, for \$19. per cord, discussing the situation with the "Canada Lumberman's" correspondent, say that the price of wood per cord will rise next summer. They give as a reason that very little of the pulpwood was made last summer and the heft of the cut being made this winter and next spring will be for the Canadian paper mills. They point out that the Canadian mills are increasing their capacity and output and the Quebec pulpwood dealers are certain to receive orders from these mills sufficient to make them independent of the export trade with the United States. They also expect to obtain the same price for their wood as will be offered from the American mills with better satisfaction in measurement and quicker payments.

The Quebec pulpwood dealers do not hesitate to make it known that they feel very much chagrined with some of the American mills who have bought this wood, and when delivered, discriminated against them by their recutting and measurements which, in some instances, they say despoiled them of their profits. For this reason, the Quebec pulpwood interests are pleased at the expansion of the Canadian paper mills and the increase in this capacity for manufacture which will so enlarge the home demand for the sale of their wood and make them more independent of the American markets. This causes them to foretell that the price on pulpwood shipped to the United States will be higher in price next summer and fall.

The Quebec pulpwood men interviewed were asked if the pulp in bulk from Scandinavian countries being shipped to the United States would not lessen and thereby lower the price of Canadian pulpwood shipped to the American mills. They replied in the negative, saying one and one-half cords of wood would make a ton of pulp, and at present price of \$19. per ton for wood delivered at the mills, would bring the cost of pulp made from Canadian wood, allowing for labor in the making, to \$31.50 per ton, which is costing the paper mills not less than \$38. per ton. Of course, they had no positive knowledge of the price of the Scandinavian pulp shipped into and delivered to the United States paper mills in the present. They based their calculation on the price of pulp shipped from Canada at \$35. per ton f.o.b., and as one of the dealers remarked with a sly twinkle in his eye, the mills who took advantage of the Canadian pulpwood delivered to give us the shortage in measurements in settlement of their payments, will have to accept the Scandinavian pulp they purchase on its face value no matter the quantity or the quality, once the sale is made and the goods delivered.

## Kiln Dried as Good as Air Dried

The kiln drying of lumber was the subject of a paper by W. O. Farey, chief chemist of R. W. Hunt & Co., Montreal, at the meeting of the Canadian Railway Club, Montreal, on January 8th.

Mr. Farey described the characteristics of the compartment kiln and the progressive kiln, pointing out that the latter was almost essential where various kilns of lumber were to be treated at the same time, and especially where different sizes were used and different stages of air seasoning had taken place before putting into the kiln. Lumber could not be piled in a progressive kiln the same as it was piled in a compartment kiln with vertical, lateral circulation. For the compartment kiln lumber must be piled endwise so that the stickers would not obstruct the free circulation and form cool pockets in the pile; in the progressive kiln cross piling was almost essential.

Mr. Farey dealt at some length with testing the circulation of air and of temperature, and also described the reasons for checking and case hardening. He also insisted that it was impossible to determine the moisture content of the lumber by peeling the wood, despite the claims of many woodworkers.

A considerable part of the paper was devoted to the method of steaming in remedy strains, checking and case hardening. In Mr. Farey's opinion lumber in general is just as good if properly kiln dried as if air dried; it should be better because on the kiln all factories could be kept under control, whereas in air the temperature and relative humidity was beyond human control and might vary decidedly from time to time.

## EDGINGS

The office of the McAuliffe Davis Co., Duke St., Ottawa, was burned recently.

The saw and planing mill of A. Root, Smith Falls, Ont. was recently burned.

The Empire Lumber Co., Ltd., Hafford, Sask., has moved their plant to Blaine Lake, Sask.

Ray B. Maxson, of Sound Bend, Ind., was in Toronto recently calling upon the members of the lumber trade.

The sash factory of J. B. Harper, Delorimer St., Hull, Que., was totally destroyed by fire recently entailing a loss of \$10,000.

The saw mill of Herbert Valliers & Son, St. Adrien de Ham, Que., was destroyed by fire recently resulting in a loss of \$10,000.

John Maloney, Limited, Toronto, is a new firm recently incorporated to deal in all kinds of building materials. Capital \$40,000.

William Rutherford, of W. Rutherford & Sons Co., Limited, has been re-elected a member of the Westmount School Commission.

St. Regis Paper Co., of Canada, Limited 11 Place D'Armes, Montreal, expect to start work on a new chemical pulp mill at Godbout, Que., early in the spring.

C. S. Rollins, of Coe Hill, Ont., says that lumber conditions in that part of Hastings township will be about the same as last year. The same mills will be operating with, perhaps, a little larger output.

A. J. Auger, of Auger & Son, Limited, Quebec, was a recent visitor to Montreal. The firm has now a Montreal office at Room 85, 224 St. James St., with S. G. Claxton as representative.

J. R. Booth, Burlington, Vt., of J. R. Booth, Limited, was in Montreal recently on his way East. He was a guest at the weekly luncheon of the Montreal Wholesale Lumber Dealers' Association.

Tenders will be called about the first of February by the Quebec Department of Lands and Forests for the proposed dam to cost approximately \$1,800,000 to be constructed at Lake Kenogami, Que.

The five colonization parishes north of Mont Laurier, P.Q., are asking the C.P.R. to extend the line from Mont Laurier to a point thirty miles beyond. One reason urged for the extension is that it would develop the forest products of the district.

The Buckland Lumber Company's plant at New Westminster, B.C., after being closed for some time, has resumed operations at full capacity. The company is opening up a big tract of timberland at the head of Lake Pitt.

Henry Peladeau, Ltd., Ontario St., Montreal, Que., have installed a complete A-7 hardwood flooring outfit, as manufactured by the P. B. Yates Machine Co., Hamilton. The A-7 produces on hardwood a glossy, soft-finish, clean cut surface without the slightest sign of a knife mark; which is a most desirable result.

J. B. Mackenzie, who is chairman of the Orangeville District of the Ontario Retail Lumber Dealers' Association, was recently elected chairman of the School Board of Georgetown, Ont. This makes the third time that he has been appointed to this important office.

Z. Mageau, M. L. A., who for several years has been Mayor of the town of Sturgeon Falls, has withdrawn from municipal life. His successor, Theo. Legault, was elected by acclamation upon the request of Mr. Mageau who is a very busy man in his extensive lumber operations at Field and his legislative and other duties.

Exports from Northern Ontario to the United States during the year 1922 amounted to \$20,811,076, an increase of \$3,250,000 over last year's figures. H. S. Tewell, American Vice-Councillor at North Bay, says that the increases in the shipments of paper, pulp, pulpwood, lumber and silver bullion account for the greater part of the gains.

Garden River Improvement Co., Limited, Thessalon, Ont., was recently incorporated with provincial charter to build dams, slides, booms and other works necessary to facilitate the driving of timber on the Garden River. Capital \$40,000. One of the incorporators is Charles Nathan Carrey, lumberman, of Thessalon, Ont.

Cant & Kemp, timber brokers, 52 St. Enoch Square, Glasgow, Scotland, announce that they have assumed as partner, James S. Cupples, who has been in their employ for many years. During the whole of his business career Mr. Cupples has been connected with the timber trade and possesses a good knowledge of it in all its branches.

W. N. Belair, vice-president and secretary-treasurer of the Schuster Co., Limited, Belleville, Ont., accompanied by his wife, sailed recently on a trip to the Mediterranean. Mr. and Mrs. Belair will also visit several countries in Europe and the British Isles before returning home.

John Stevely, secretary-treasurer of the Columbia Handle Co., London, Ont., and one of the best-known business men of that city, passed away recently. He was 60 years of age and is survived by his widow, one son and one daughter. Ex-Mayor Samuel Stevely, of London, is a brother.

Diamond & Cook, of Steenburg, Hastings County, Ont., say they are taking out several hundred thousand feet of maple, beech, birch, basswood, ash and hemlock and several thousand hardwood ties. The company are paying a little higher wages than last year and report that production is very good.

The new plant of the Westminster Paper Mills at New Westminster, B.C., is now in operation. Rough grades of tissue are being turned out at the present time and lately the finishing room was put in operation. J. J. Herb is the president of the company and H. M. Lord the secretary-treasurer.

A charter has been granted to the Standeaven Lumber Co., Limited, of London, Ont., with a capital stock of \$40,000. The incorporators are Frank Standeaven, of St. Mary's, Ont.; John A. Newall, and Wm. Switzer, of Blanchard Township, Perth County. The new organization is empowered to carry on the business of timber merchants, logging, lumbering, etc.

The Millwood Lumber Co., Limited, of Sault Ste. Marie, Ont., has been granted a charter with a capital stock of \$40,000, to carry on the business of lumbering, pulp, paper, etc. Among the incorporators are George A. Montgomery, Edgar B. Barber, Ralph R. S. McCormick, Fred. H. J. Herrold, W. J. McCormack and F. W. Acheson, all of Sault Ste. Marie.

According to figures compiled by the Department of Lands and Forests, there was cut in the province of Ontario during the past year 289,113 cords of pulpwood and 309,000,000 feet of lumber. The area covered by timber operators under license from the Department of Lands and Forests at the end of the fiscal year was 17,289 square miles.

Robert Cox & Co., of Liverpool, England, whose Canadian headquarters are in the Hope Building, Ottawa, state that the news item which appeared some time ago in the "Canada Lumberman" to the effect that the entire 1922 cut of pine of J. R. Booth, of Ottawa, had been purchased by another firm, is misleading. Robert Cox & Co. say that, for almost fifty years they have bought half of Mr. Booth's cut of pine and, as usual, purchased their half of the output of 1922.

Fifteen able-bodied men were sentenced to one month's imprisonment by Judge Lachance in the Court of Sessions recently in Quebec City on the charge of vagrancy. When the judge intimated that he would send them to jail for one month, some of them said that they would work if they could find employment. Sentence was deferred and an employer for a lumber camp was sent for. He came to the court house and offered to hire all of them at \$50 a month. They all refused the offer, preferring to go to jail for one month.

The large pulp mill erected by Backus & Brooks at Kenora, Ont., is now about completed. It is expected that it will be in operation by March next. Work will then be commenced on the excavations for the paper mill which is projected early in the spring. Mr. Backus and his associates are spending in the neighborhood of \$2,000,000 in the erection of the pulp mill and the plant for power development. The pulpwood will be cut in the Lake of the Woods district where large reserves are held. It is expected that nearly 200 men will be employed in the groundwood pulp plant.

The Newaygo Co., Limited, of Port Arthur, recently secured the right to cut the pine on Concessions 5, 6 and 9 in Lyon township, District of Thunder Bay. Their tender was \$12.00, plus \$2.50 for pine, 20 cents plus 10 cents for ties and Crown dues (25 cents) for fuel wood. They state that they already own the spruce and balsam on these lands. The company add they will not be conducting any operations this winter and do not expect to go into the lumber business but when they do, they say it will be only to take off the piling and ties. George C. Schneider is head of the Newaygo Company.

It is said that a number of private citizens of Haileybury are investigating upon the advisability of erecting a planing mill by public subscription. It is pointed out there is a big demand for such an enterprise in the district in connection with the extensive rebuilding operations which will be carried on in the way of erection of stores and houses, and the prospects for business are reported very good. The probable location of the new industry will be on the site formerly occupied by the pulpwood robbing plant of the Riordon Company which was destroyed by fire in October last.

## Sylvester Hand Car Engines Will Change Your Hand Cars into Motor Cars

A Logging Camp is not complete without one or more. Backed by years of successful Railway Service.

**JUST THE THING FOR TRANSPORTING MEN AND DOING LIGHT HAULING**  
The old hand car is slow, expensive to operate and entirely out of date. Sylvester equipped cars will pay for themselves in a short time. Use them to transport your men and do your light hauling. You will be surprised at the amount of work they will do.

WE MANUFACTURE

Hand Car Engines.  
Section Hand Cars.  
Gasoline and Oil Pumping Engines.

Motor Cars built for Engine Drive.  
Push Cars or Trailers.

# Gates Furnace

## For Burning Sawdust and Hog Fuel

Gates Engineering Co. Ltd., 314 Notre Dame St. W.  
Montreal

*Will burn tan bark, hog fuel and sawdust efficiently, with up to 60% moisture*

Gates Air Cooled Suspended Arches

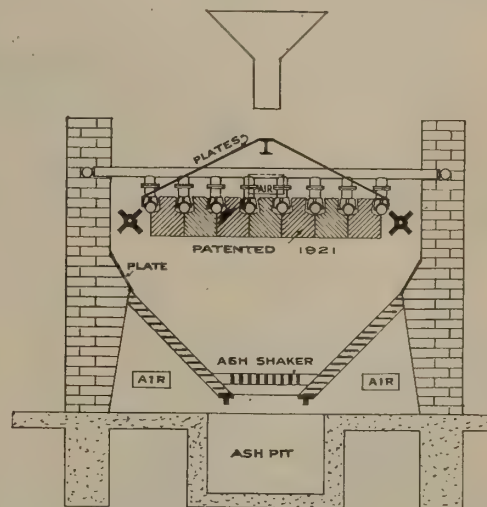

Boiler Door Arches and Jambs

The Water or Air cooled Suspension Arch, suspended over a furnace built with incline grates, to prevent the coning of sawdust and refuse material, combined with the automatic feed and drying chamber suspended directly over arch, absorbing the heat from arch roof which removes the required percentage of moisture from the material to be burned.

Note that fuel is partly dried before receiving air while passing over dry plate chamber at the lower edges, thence into combustion chamber space over the fuel bed. All ash is removed by stoking grate at the bottom of furnace.

All fuel sliding down the incline grates comes in contact with a special draft action, owing to the horizontal air spacing, through the incline grates on either side, the draft currents arrive at a focus of combustion in the centre of the furnace, causing the gases and flame to meet and roll towards the edges of dry plates, thus increasing the drying capacity, and thoroughly drying tan bark or fuel which is being burnt.

The blocks in these arches are supported independently of the other, allowing any one brick to be removed and replaced without disturbing any other portion of arch.

**We specialize in Boiler Settings and Furnace Brickwork and give the benefit of (30) thirty years' experience. Ready to go anywhere to build new Boiler Settings and overhaul and Reset old Boilers and build Furnaces.**

# PERFECT POWER

***“Belting trouble ends  
where D.K. McLaren’s  
Belting begins”***

**T**HE experienced mill owner knows that the cost of a belt is not determined by the price tag, but by the maintenance costs during the time the belt is in service.

If there is undue slippage or friction, or if breakdowns occur, these expenses must be charged to the belt. How futile then to buy an inferior belt just because it is a few dollars cheaper. When money is saved in this way, it is invariably paid out again with interest during the first few weeks run.

When you purchase D. K. McLAREN'S Genuine British Oak-Tanned LEATHER BELTING a different story is told.

Here you have a belt made only from the back portions of selected hides subjected to the genuine British Oak Tanning process—a slow and expensive process, but one that not only adds to the original toughness of the hide but imparts that wonderful flexibility and “stretchless quality” that means “trouble free” service.

## **D. K. McLAREN LIMITED**

**Head Office & Factory: 351 St. James St. Montreal**

### ***Look for the Oak Leaf***

Only after every inch of belting has passed the severest tests is this Oak Leaf stamped upon it.

# The Ideal Edger for Light Mills

## Specifications

Our new Double Edger is built on entirely new lines, and possesses many features that commend it to mill men. The saving in material alone will soon pay for the machine. The output of a mill with this machine can be increased by one-third. It is best adapted for medium-sized or portable mills that cut from 5,000 to 25,000 feet of lumber per day.

**SAWS**—This Edger is fitted with either two or three saws as required. The saws are 16 in. in diameter, and 10 in. gauge. The greatest distance between saws is:—Two saw machines, 24 in.; three saw machine, 20 in., the least distance between saws, 2 in.

**DRIVE PULLEY**—The Drive Pulley is 9 in. x 9 in., affording a good belt grip, and is supported by an outside bearing.

**SAW ARBOR**—The Saw Arbor is made of 2½ in. steel, and has very wide bearings.

## "FIRE ME"

said a progressive salesman to the Manager. "I am costing the House too much. I am spending so much of my time explaining to prospective customers who I am, who my House is, what my goods are, and why they are worth buying, that I don't have much time left for selling. Do all this preliminary work for me by means of effective advertising before I reach the lumberman. It can be done better and cheaper this way than I can ever hope to do it."

# Canada Lumberman

The wise manufacturer uses The Canada Lumberman not only to save his salesmen time but also to save the time of the Jobbers' salesmen.

The "open door" to the lumber industry is the Canada Lumberman which for years has earned and held the confidence of advertiser and buyer.

## The Finest Chefs Will Fail Unless

You pay your chef high wages. You realize that on him depends much of the efficiency of your men, for good grub means a great deal to a camp. That is good business.

But the finest chef in the land will fail if you handicap him with poor supplies. It pays well to give him Swift's.

Swift's products are the result of many years experience in catering to lumber camps. Jewel Brand Shortening makes fine pastry certain. Our fresh and frozen meats are selected from the best the country offers. And all supplies are kept up to the highest standard. They reach you in perfect condition in our own refrigerator cars—on time. These are the reasons camp operators in increasing numbers are turning to Swift's.

**Swift Canadian Co.**

# FIRE BRICK AND CLAY

We make several brands of fire brick by every known process of manufacture from a selection of various high grade Pennsylvania clays. This enables us to furnish the best for your boilers, dutch ovens, refuse burners, kilns, etc. We specialize in fire brick for power plants and if you will advise us whether your boilers are hand fired or stoker fired and kind of fuel used we can then give you the proper brick for your work.

We carry a large stock of our different brands in various sizes and shapes in our Hamilton warehouse which enables us to ship at once.

We manufacture the following well-known brands:

**"Elkco Special," "Elk Steel,"  
"St. Marys," "Keystone" and "M.D. Elk"**

Write for copy of our catalogue,

**Elk Fire Brick Co. of Canada, Ltd.**

**Dominion Express Building, : Montreal, Canada**

# Adams Pointers

These powerful, efficient and economical gasoline boats, manufactured at Penetang, are giving universal satisfaction all over Canada.

Lumbermen will find it cheaper, quicker and safer to work with an Adams Pointer. They are much more economical and easier to operate than alligators or tugs.

The Adams Pointer is equipped with a powerful, heavy duty, easy running engine, extra heavy reverse gear and warping winch, and will prove equal to your heaviest work.

We can supply the machinery separate from hull if so desired.

*Write for further particulars and blue prints which give in detail where our Pointers excel.*

## Adams Engine Co., Penetang, Ont.

## The Machine that Holds the World's Record of 128,350 Laths Test Cut in 10 Hours

Four Hundred Sawmills in the Dominion are to-day using this machine.

It has all the latest improvements and for quick, clean work has no equal.

The Payette No. 1 Bolter and No. 2 Lath Mill will cut, count, tie and pile 128,350 lath in a period of ten hours. The above consisted of 4 foot laths, 1½ by ¾ inches, and constitutes a record in rapid lath cutting.

If you are not using a Payette Lath Mill outfit, you should be.

Shall we send you full particulars and prices?

# BARIENGER BRAKING DEVICE

This device is a real boon to lumbermen for it greatly reduces the cost of logging operations. Heavy loads can be swiftly and safely taken down steep grades, eliminating the expense of building winding roads. Neither is sand and straw hilling necessary even in the roughest country. If you are not familiar with the many advantages of the Barienger Braking Device. Write for particulars today.

## Gerlach Modern Machinery Produces Cheaper and Better

Tight and Slack Cooperage Stock for Barrels, Kegs and Tubs, ready to set up into non-leaking packages of 5 to 120 gallons liquid capacity, or for semi-liquid and dry materials up to 800 lbs. weight. We manufacture machinery for sawing, jointing, planing and crozing staves; for sawing, jointing, dowsing, planing and circling heading.

### MODERNIZE YOUR PLANT

Scrap Machinery invented before the Civil War and install a Gerlach Outfit that will make Tight Barrels that are tight, from any strong non-porous timber.

### BUILD

Barrels with perfect joints that will not leak; a product that is infinitely superior to the tin and iron near barrels now being experimented with. Wood is tasteless, stainless and rustless and being a poor conductor of heat or moisture, keeps its contents in their original condition.

### CYLINDER SAWS RESTEELED

# The Name "LONG" Is Your Guarantee on Sawmill Machinery

"Long" Sawmill Equipment has built up an enviable reputation for long and efficient service. The name has come to be synonymous in the lumber industry with all that is best in machinery. "Long" Band Mills are no exception for they combine all the latest features with exceptional strength and accessibility. The unusually heavy bed consists of one solid casting entirely surrounding the machine. All bearings are adjustable longitudinally, laterally and vertically. They are chain-oiling, water-cooled and are all the same size and interchangeable.

Quick installation is another desirable feature of the "Long" Band Mill. The columns, which are of very heavy hollow box section, and of unit construction, are mounted directly on the base casting. They are held in place by bolts and dowel pins and enclose the lifting screws and operating gears. The bottom is accurately planed. If you haven't our catalogue of mill equipment on file, you should write for it today. It will be gladly sent on request.

# Waterous

BRANTFORD, ONTARIO, CANADA

**T**HE WATEROUS EDGER has the stable investment value that only a well built machine can give. It returns a steady profit to its owner. It operates at low cost. It serves through year after year and is always the same reliable capable Edger.

The sturdy and trouble-free performance which has made the WATEROUS EDGER the recognized means of obtaining better lumber at lower cost is a definite product of WATEROUS design, materials and manufacture. The WATEROUS provision for accurate rating of the Edger to its work is additional guarantee of such performance.

As an example of the regard in which WATEROUS Edgers are held by the Saw Mill men of Canada, take the fact that there are upwards of 300 WATEROUS Edgers now at work, and that many of these are repeat orders.

These repeat orders are the best proof we have of the satisfaction that these Edgers are giving.

## Prescott's Valve Controller

Patented June 8, 1915

The Machine You Have Been Waiting for.

To eliminate every trouble with your Steam Feed Valves install one of these machines.

### Six Real Reasons for Doing So:

- 1—Gives the sawyer the easiest kind of control of valve.
- 2—Hand lever stays put, making them safe against any jerk or kick of valve.
- 3—Gives the sawyer every confidence in handling valve.
- 4—Will prevent accidents—is easier on the nerves and carriage runs steadier.
- 5—Water flowing into valves from foaming boilers does not fret the sawyer.
- 6—This relief from all troubles of which sawyers have complained enables them to give closer attention to the logs they are cutting and a better inspection of the lumber they produce.

Read what one of the largest lumber companies on the north shore has to say about it.

We are sole Canadian manufacturers of these machines.

Pamphlets with full description and prices on application.

Let us quote you also on our new "Hamilton" Vertical Steam Feed Valves.

WHAT IS IT?

PRESCOTT'S VALVE CONTROLLER

Waubushene, Ont., Sept. 11, 1917.  
Messrs. Wm. Hamilton Co.,  
Peterborough, Ont.

Gentlemen:—

Replying to your inquiry re Prescott Valve Controller, which you sent us last spring to try out: I beg to say that we installed this machine early in April, just previous to starting the mills, selecting the most difficult valve we have to handle, the steam having to travel through nearly three hundred lineal feet of pipe to reach this valve, and noting the fact that the pipes are well covered, there is necessarily considerable condensation, and every sawyer knows the annoyance caused by water passing through the valves which violently jars or jerks the lever, sometimes wrenching it from the hand and thereby inflicting serious damage to the machinery of the mill. And now after nearly five months of daily use, I am pleased to tell you that this device has put up all that is claimed for it. There is not the slightest jar or vibration to be felt, no matter where the lever is held. It is very easily attached and does not interfere in any way with the free movement of the lever, and the Sawyer, Mr. George Botting, also our Foreman, Mr. W. A. Gill, both speak of your controller in the most glowing terms. I can, therefore, congratulate you on securing an article that will fill many a long felt want.

Yours truly,

(Signed) D. B. Anderson.

Chief Engineer.

Timber and Red Cedar Shingles***Let us quote you. Our prices are right*

We also handle the well known

**"TEN-TEST" SOLID FIBRE BOARD****A Permanent Lumber  
Service**

**A**FTER several years of inactivity we are now cutting on our modern fully equipped mills at Manistique and Little Lake, Upper Michigan. The timber behind these mills was purchased many years ago by the Stack interests from the then "unlimited" supply. Its quality, particularly the maple and birch, is the envy of northern mill men among whom this tract is famous.

This timber will run the mills to full capacity for fifteen to twenty years. The 40,000,000 feet annual cut will run:

15,000,000 ft. maple annually  
6,000,000 ft. birch annually  
2,500,000 ft. beech annually  
2,500,000 ft. elm annually  
900,000 ft. basswood annually  
200,000 ft. ash annually  
6,000,000 ft. hemlock annually  
3,000,000 ft. white pine annually

the balance in Spruce and Tamarack.

Our exceptional service, grades, and manufacture will be maintained.

"Low freight rate shipments by water to Toronto, Montreal, Owen Sound, Port Arthur, and other Great Lakes and St. Lawrence River Ports. Conveniently located also for rail shipments to inland points by C.P.R. or Soo line."

We will be pleased to hear from old friends and from new ones who can understand and appreciate what permanent connection with such a source of supply would mean.

# BUY BRITISH COLUMBIA Red Cedar Shingles

The life of a British Columbia Red Cedar Shingle Roof can almost be gauged by the life of the nail with which the shingle is nailed in place. Judging from available data, the average life of the ordinary steel wire nail, which has been in such common use, is only from seven to twelve years. Some wire nails will last longer, depending upon the condition of exposure, climate and similar features, but considering our climate as a whole, at the end of from seven to twelve years a large percentage of wire nails will have rusted either completely through or so extensively that the first strong wind will complete the work. The shingles that have been held in position by such nails are then free to work down, permitting rains or melting snows to leak through and damage the interior of the structure. Examination will disclose that the fibre of the shingle itself is still in perfect condition, and a leaky roof, in the majority of occasions is due entirely to the use of faulty nails, but the average home owner, placed at such inconvenience, will not stop to reason this out and the poor wooden shingle comes in for more unjust abuse.

There are several kinds of nails which experience has proven will give lasting satisfaction, and the wise dealer will advise his customers of these satisfactory nails. A pure zinc shingle nail meets all the demands of durability required. Its principal drawback is its high cost and a slight tendency to bend under careless driving. Galvanized wire nails theoretically are rust proof, and if the galvanized coating is properly applied, and of sufficient thickness, such a nail will last as long as the shingle it holds in place. The life of this shingle roof, properly applied with these nails then is from 40 to 50 years. Pure iron nails, or the old cut or wrought nails are ideal but difficult to secure. Copper nails also constitute a perfect shingle nail.

Above: Every strand of Link-Belt Chain is tested under load before shipping.

Insert: The Link-Belt Laboratory. Years of research and experiments have enabled us to reach and maintain the high Link-Belt standards.

Showing stock of chain at one of our warehouses.

### HERE'S WHY YOU SHOULD USE LINK-BELT CHAINS

EVERY strand of Link-Belt chain is not only made from the best materials, but is inspected and tested under load for strength, and uniformity of pitch.

Uniform high-tensile malleable iron castings—hard smooth pins—hard smooth cored holes for pins—generous wearing shoes for dragging—uniformity of pitch,

giving good sprocket action. These are reasons why Link-Belt Chains wear longest.

Measure values in length of service, and you will find that Link-Belt Chains are cheapest in the long run.

This >—< mark identifies genuine Link-Belt Chain.

# Gates Furnace

## For Burning Sawdust and Hog Fuel

Gates Engineering Co. Ltd., 314 Notre Dame St. W.  
Montreal

*Will burn tan bark, hog fuel and sawdust efficiently, with up to 60% moisture*

Gates Air Cooled Suspended Arches

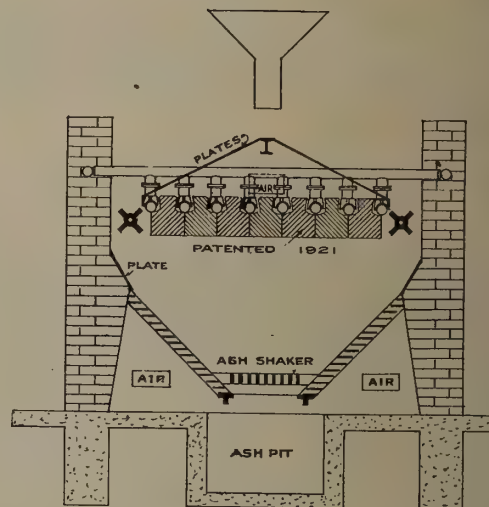

Boiler Door Arches and Jamb

The Water or Air cooled Suspension Arch, suspended over a furnace built with incline grates, to prevent the coning of sawdust and refuse material, combined with the automatic feed and drying chamber suspended directly over arch, absorbing the heat from arch roof which removes the required percentage of moisture from the material to be burned.

Note that fuel is partly dried before receiving air while passing over dry plate chamber at the lower edges, thence into combustion chamber space over the fuel bed. All ash is removed by stoking grate at the bottom of furnace.

All fuel sliding down the incline grates comes in contact with a special draft action, owing to the horizontal air spacing, through the incline grates on either side, the draft currents arrive at a focus of combustion in the centre of the furnace, causing the gases and flame to meet and roll towards the edges of dry plates, thus increasing the drying capacity, and thoroughly drying tan bark or fuel which is being burnt.

The blocks in these arches are supported independently of the other, allowing any one brick to be removed and replaced without disturbing any other portion of arch.

**We specialize in Boiler Settings and Furnace Brickwork and give the benefit of (30) thirty years' experience. Ready to go anywhere to build new Boiler Settings and overhaul and Reset old Boilers and build Furnaces.**

## How Retail Lumber Dealer Can Co-operate With Farmers of His District

*He Should Carry on Propaganda by Getting Out and Driving Some Facts Home to Those Who Have No Implement Shed—Authentic Information on the Loss Caused by Exposure, the Cost of Building Proper Shed and the Value of the Equipment Ordinarily Used on the Farm Stored Therein—What Leading Makers of Machinery Have to Say on Subject of Great Importance*

Much has been said of what the retailer can do in persuading farmers to construct implement sheds to house their farm equipment. This subject has been referred to from time to time in the "Canada Lumberman" and pictures presented showing the havoc wrought by the elements when machinery is left outdoors to withstand the rain, sleet, snow, ice, and hail.

What would be thought of the average individual who left his automobile out in all kinds of weather and never ran it into a garage, or of a woman who might be sewing on the lawn, allowing her sewing machine to stay out in the rain, or sun all summer or frost during the fall months. These pictures may be a little overdrawn but it sometimes requires exaggeration to drive home definitely a point or make some offenders realize the absurdity and unreasonableness of the stand they take on certain matters.

There are still some farmers in Eastern Canada who never think of running their agricultural implements under cover. Their whole thought apparently is that "sufficient unto the day is the evil thereof," and "Let tomorrow take care of itself." The sinister minded farmer might say "It is my own business what I do with my equipment if I have it paid for." Perhaps on a miserable, selfish basis he can do what he likes with his pastoral paraphernalia. He may burn it up or sell it for scrap iron if he so desires, but if he will adopt a sane, thoughtful view, he will recognize that he does not live to himself alone. His influence is either for good or evil in the neighborhood and if he shows progress and initiative, he is held in greater respect and esteem. Now every farmer wants to be well thought of and kindly regarded by his fellows. He may make a bluff about not giving a tinker's cuss how others regard him, but in his calmer moments he will acknowledge that he does.

### What Farmer Invests in Machinery

Even manufacturers of farm implement machinery protest at the storing of the equipment in the open because the outdoor storage cuts the life of the implements in two and keeps the farmer con-

tinually buying new ones. This may seem paradoxical but it is pointed out that the man, who does not take care of the machinery that he now possesses, is not likely to be in a position to buy more or better equipment or better buildings. On many farms the annual damage done to machinery through exposure to wind or weather would soon more than equal the cost of an implement shed.

There is little need of proceeding further along the line of argument which should be self-evident to all. The retail lumber dealer can carry on strong propaganda by getting out and driving home a few facts to the farmers who have not an implement shed. It may take some tact, industry and persuasiveness to convince the first man, but with each success the work grows easier until a spirit of rivalry will spring up among the members of a community so that each one will not be behind his neighbor. It is wonderful how we all are influenced by the other fellow, consciously or unconsciously. We may not care to admit it but the fact remains established just the same.

Now getting down to "brass tacks" or from the general to the particular and from the abstract to the concrete, the "Canada Lumberman" has ascertained from manufacturers of harvesting machinery in the Dominion that the average owner of a 100 or 150-acre farm in the eastern provinces has invested in implements something like from \$1,000 to \$2,000. It depends upon whether he has tractor machinery. It may be assured, however, that \$1,200 is a fair figure in the estimate of what the farmer has in binder, mower, rake, drill, cultivator, disc harrow, etc.

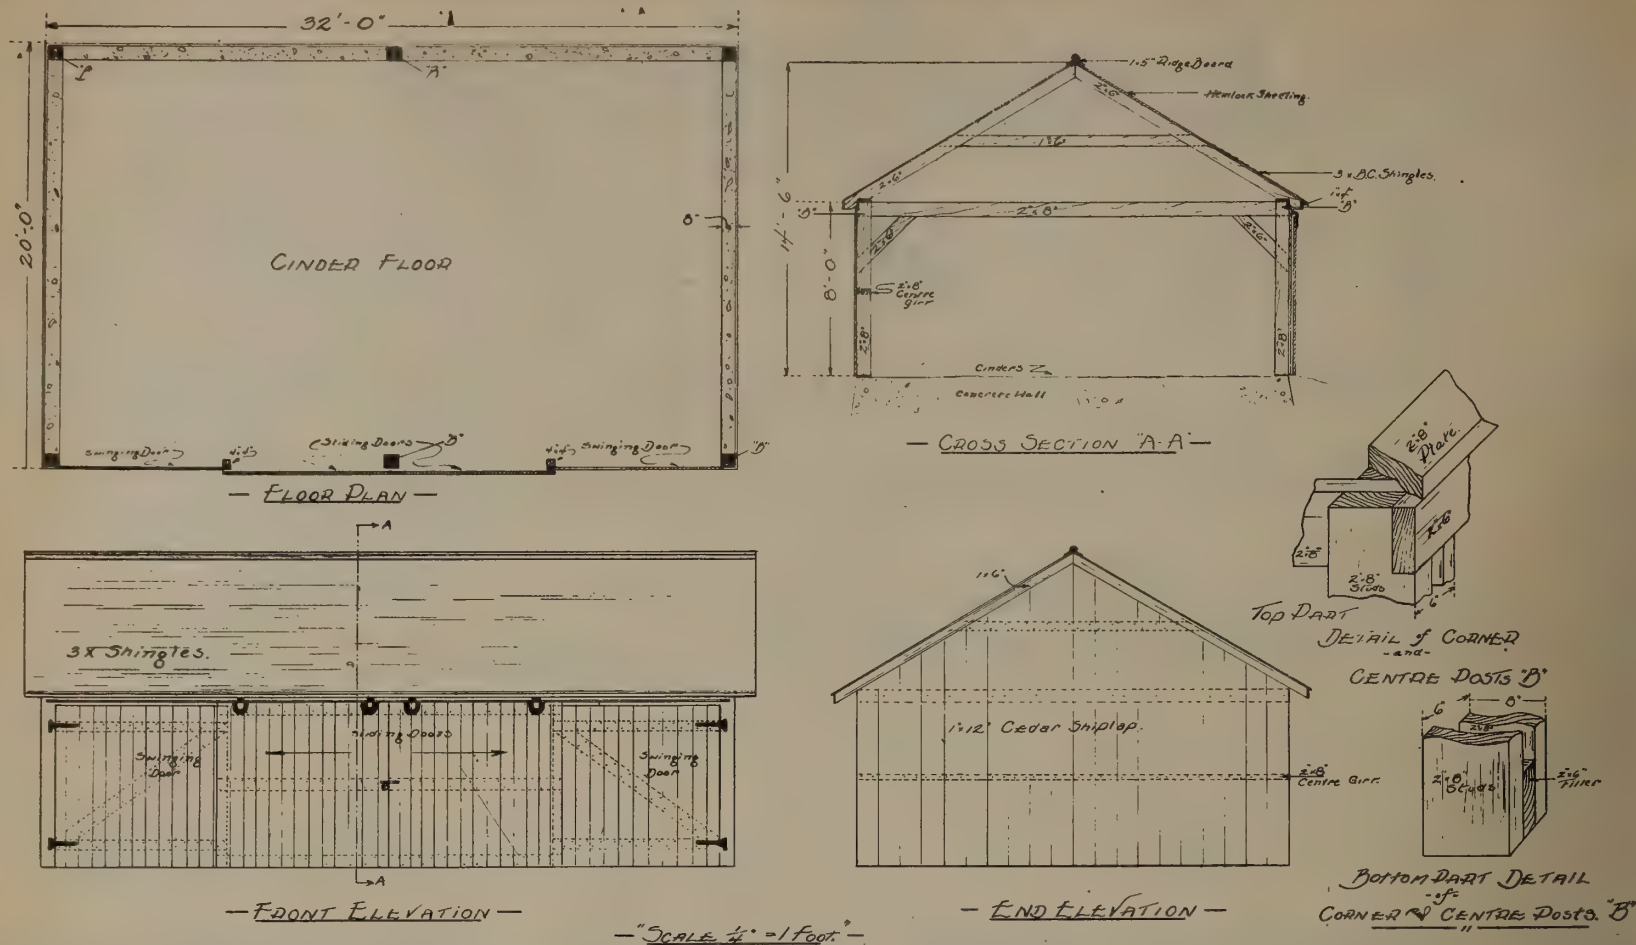

### Sheltered Machines Give Double Wear

The International Harvester Co., of Hamilton, in a recent letter say:—"Properly housed, we figure the average life of these machines will be from fifteen to thirty years. Without giving the necessary attention to proper housing facilities, we believe the records show that seven to ten years is the average period of their usefulness. Our observations is to the effect that farmers generally are

How Mother Nature protects agricultural machinery. Actual photographs taken on farm in Ontario, showing how a binder, horse-rake and mower are left out for months to battle with the elements.

Plan showing well-equipped implement shed. As one dealer puts it, "implement sheds are cheap and necessary; farm machinery is necessary but not cheap"

giving more attention each year to providing proper storage facilities for their equipment. It is agreed that a machine, when suitably sheltered, will give double the wear and service than one not properly housed. Of course, much depends upon the mechanism, whether it is complicated, easily gets out of order or is sensitive in its operation; for instance, the Ohio State University some time ago conducted an investigation regarding the average life of various implements when housed and when not housed.

Here is the result obtained by a questionnaire sent out to two hundred farmers, and the figures represent the farmers' own estimate of the value of the care of implements:—

	When Housed	Not Housed
Cultivator .....	12	7
Corn Planter .....	17	7
Binder .....	14	7
Disc Harrow .....	15	8
Drum Rake .....	16	7 1/2
Side Delivery Rake .....	12	8
Drill .....	14	6 1/2
Plow .....	14	9
Hay Loader .....	15	7
Manure Spreader .....	12	6
Mower .....	15	9
Wagon .....	22	8

In a recent letter to the "Canada Lumberman," the sales manager for the Massey-Harris Co., Toronto who has given considerable attention to the subject of the proper housing of farm implements, comprehensively sums up the situation as follows:—We have never made any attempt to figure this up closely on our own account, although roughly we have found that implements will last if cared for at all properly on an average of ten years. Generally speaking, farmers in Eastern Canada have come to realize, more so than their brothers in the West, the advisability of keeping their implements under cover, and in the East it is the exception for farmers to leave implements out of doors the year around. On the other hand, while we believe that the Western farmers appreciate the value of properly housing their implements, owing to the scarcity or expense of the necessary lumber, etc., it is the exception in the West to have implements properly housed. This is a situation, however, which obtained in the East years ago and has been gradually bettered, and for this reason we believe that this feature is being gradually bettered in the West and it will in time come to be the rule that Western farmers house their implements.

Much more might be written on this subject, the avenue which opens out for the retail lumber dealer to get busy, extend his ac-

quaintanceship and widen his sales. Armed with the facts which have been presented regarding how it pays to house machinery, the lumber merchant would have no difficulty in selling more and more material for implement sheds. He will point out that, if it is important to grow crops, it is also important to save them and the harvest cannot be properly grown and garnered without the aid of efficient machinery in a good state of repair.

The cost of an implement shed, according to one well-known Ontario retail lumber dealer, J. B. Mackenzie, of Georgetown, depends, of course, upon the size of the structure. They are made generally in 16-foot length units such as 32, 48 or 64 feet, and 20 to 22 feet wide, and built with a cement wall on three sides with cement posts where doors divide in front. The frames are made of 2 inch plank. The outside is boarded with 1 x 12 cedar shiplap 8 feet

Interior of a modern implement shed

long, put upright. The doors of the same material and swing or slide, whichever is preferred. The roof is of B. C. shingles laid with zinc-coated nails.

The cost of material at most any yard in Ontario would be about \$225.00 for a 32-foot length shed; \$285.00 for a 48-foot length shed and \$335.00 for a 64-foot length shed. The hardware for the building would cost about \$20.00 to \$40.00 according to the style of door fittings.

In regard to the outlay for carpenter work for an average-sized implement shed, such as is shown in the illustration, a well-known retail lumber dealer estimates that it would cost a farmer about \$96. the farmer to board the men and provide the cement for the foundation wall.

In some of his advertising, Mr. Mackenzie calls attention to the

(Continued on page 48)

# Cost Accounting Plan in Logging Activities

*System Ably Outlined Before Woodlands Section at its Annual Meeting—How Several Firms Have Been Enabled to Reduce Expenses in Bush Operations*

R. P. Kernan, Donnacona, Que.  
Retiring Chairman Woodlands Section

The members of the Woodlands Section of the Canadian Pulp and Paper Association met at the Ritz-Carlton hotel, with Mr. R. P. Kernan of the Donnacona Paper Co. in the chair.

In his address, Mr. Kernan pointed out that the section was mainly interested in the commercial end of the industry—in logging methods and improved cutting methods. He was of the opinion that the section had not made the desired progress, although good work had been done in some directions. This was due, he felt, through a lack of co-ordination, and the only solution was the appointment of a permanent secretary, a trained man, who could devote all his time to the working out of their problems—one who could help all the mills in all their problems.

Mr. Ellwood Wilson, of the Laurentide Company, spoke on "Progress of Research Work in Forestry in Canada." In the past research work had been along the lines of pure science, but the day was coming when it would be on a broader basis. He remarked upon the vital necessity of having a definite idea of a problem before attempting its solution. In woods operation a lot of time was lost because of the inclination to let problems solve themselves. In the Woodlands Section problems would become more and more pressing and unless these were tackled in a business-like way, it would mean the loss of considerable money. Mr. Wilson instanced driving operations and remarked upon the greater efficiency in Norway and Sweden as compared with Canada. It was essential to get at basic facts, and the proposed appointment of a permanent secretary would help very considerably in this direction.

## Progress Made in Cost Accounting

"Cost Accounting for Logging Operations," was the subject of a paper by Mr. L. W. Campbell, chief accountant of the Laurentide Company. He referred to the previous lack of information in this connection and Mr. G. A. Ware, of Price, Waterhouse & Co., was requested to draw up and submit a uniform method of cost accounting for logging operations to a committee formed of representatives from Price Bros. & Co., Spanish River Pulp & Paper Co., St. Maurice Paper Co., International Paper Co., Abitibi Power & Paper Co., and Laurentide Co. A plan was submitted and endorsed by the committee and appeared in booklet form last June. It contained sample forms and names of accounts with instructions for handling them. Two large companies have installed systems based on this plan and both were quite pleased with the results obtained.

Mr. Campbell described briefly a few of the reports compiled by the Accounting Department of one company for the use of its Woodlands Manager and District Superintendents.

**First**, monthly and accumulative statements of the cutting and hauling costs, showing quantities, expenditure and unit costs in detail. There was no uniform measuring stick for determining cutting costs. Some companies used board feet, which was not accurate, as the relation between board feet and the pulp content or solid content of a log varied according to its diameter. Other companies used cord measures, but how were they going to determine the number of cords from diameters?

**Second**, statement showing list of jobbers, quantity contracted for, and price. Opposite this information was shown quantity cut as well as the total amount of the cash advances and charges against the jobber for the period, also what these advances represent per 1,000 feet of wood produced by the jobber. A comparison of this latter with the contract rates would indicate whether the superin-

tendent should close the jobber off, or allow him further credit for the continuance of his operations. This particular statement showed the condition of each jobber's account up to the end of any month, but, if the superintendent desired, he might obtain from the district accountant the standing of any jobber's account up to the end of the preceding day.

**Third**, statement showing cost per meal as served in each camp or boarding house. This expense was divided under Foodstuff, Labor and Miscellaneous and showed monthly as well as accumulative costs. The cost of feeding men was a very important factor in the cost of wood production. This year it was estimated that the cost of meals would equal an amount of 40 per cent of the direct woodlands payroll.

**Fourth, Stable Costs:** Statement showing cost per horse meal in each camp under heading of fodder, labor and miscellaneous. It also showed proportion of idle time which if great would indicate poor care of horses, or that the camp had more horses than required.

**Fifth, Supplies:** Perpetual inventory ledgers were used to report supply transactions. A statement was compiled monthly showing the total value of supplies in the districts. It showed amount of supplies purchased and transferred from one point to another. It also recorded the value of supplies sold to jobbers, to employees and supplies used for company operations, as well as the value and particulars of goods that have been spoiled or depreciated. Subsidiary statements, which tied up with the foregoing were available which showed the value of supplies in each hangar under the following headings:—Provisions, tools and equipment, hardware and miscellaneous, table and cooking utensils, new and spare harness parts, clothing, dry goods, medical and toilet articles.

## All Prepared in Standardized Form

There were many advantages to be obtained by this method of recording supplies. It reduced cost of operations by allowing the superintendent to carry the minimum quantity of supplies necessary for the carrying on of operations, thus reducing working capital and cost of insurance on goods, and loss by spoilage or depreciation. It plainly showed what articles were moving slowly in the van accounts and therefore unpopular with the men and in many cases should not be carried in stock.

All of these monthly statements were available for the district superintendent within two or three days after the close of each month. Copies of all figures were sent to head office from each district or division. They were all prepared in standardized form and consolidated on a comparative statement for the use of the Woodlands manager. In view of the need of the accountants for accurate data and the need of the logging operators for accurate costs and statistics to enable them to cut costs, why could they not get together on this plan? According to reports, 3,750,000 cords of wood were consumed by the requirements of the paper industry alone in the United States and Canada necessitating a yearly expenditure for logging operations of over \$50,000,000.00. Let them suppose that by the use of this plan or by any other means, costs were cut by 2 per cent. This would result in the saving to the industry each year of \$1,000,000.00. New scientific logging methods were being advanced each year; some would suit their conditions and some might not. Why not have a cost system that will tell at the end of the season whether the change was advantageous or not?

Wood at present represented 50 per cent of the cost of a ton of paper. Due to the increasing demand for newsprint more and more wood must be cut each year and, as men were becoming more and more unwilling to go to the bush when anything else offered, it would appear that logging costs must steadily increase. They were face to face with this great problem of increasing costs. Let them put their house in order now and rob the blow of some of its sting by adopting methods that will allow them to watch and check carefully every dollar spent in woodland operations.

## Great Waste in Woods Operation

Considerable discussion followed on the points raised, the chair-

man referring to the great waste in the woods operation and the difficulty of obtaining accurate data under adverse conditions. But the problems would have to be solved. Mr. Ellwood Wilson suggested that the proper location of roads was a point to be considered and that culling, too, was a matter requiring investigation, especially having regard to the discrepancies often revealed by check culling.

At the afternoon session Dr. J. S. Bates, Bathurst Co., Limited, read a paper on "How Far Can the Pulp Mill Go in Utilizing Decayed, Insect-killed, or other Inferior Wood in the Manufacture of Pulp." He came to the conclusion that it was safe to say that infected wood, which was still fairly firm and retained its fibrous appearance, would be suitable for making pulp and paper within certain limits. Any wood that was very soft, punky, or lacking in fibrous structure was undoubtedly too far gone to bother with in the pulp-mill and should be left in the woods or used for fuel in the boiler plant. The handling of inferior wood from forest to mill, the methods of conversion into

pulp and paper and the calculation of limiting costs were important factors and required careful investigation.

#### Officers Chosen for Coming Year

Mr. C. S. Hawkings, chief chemist, and Mr. Otto Schierbeck, forest engineer, of Price Bros. & Co., Limited, also read papers on the subject, the latter stating that experiments were being made as to the sinking of decayed woods.

A resolution was passed in favor of appointing a committee of three members of the section and three accountants to follow up Mr. Campbell's paper on cost accounting for logging operations.

Mr. Ellwood Wilson was appointed chairman and Mr. H. G. Schanche, chief forester of the Abitibi Company, vice-chairman for the ensuing year. Mr. W. McE. Bowden, woods manager, of the Laurentide Co., and Mr. R. P. Kernan, manager of the Donnacona Paper Co., were appointed councillors, Mr. Bowden taking the place of Mr. Wilson, and Mr. Kernan the place of Mr. T. F. Kenny.

## Progress of Forest Protective Association

### Various Methods of Preventing Destruction of Valuable Timber Discussed— Dr. Howe Tells Why Forest Protection is Necessary—Good Work Done

The attendance at the annual convention of the Quebec Forest Protective Association, Limited, grows almost year by year. The conference held at the Mount Royal Hotel, Montreal, on January 23rd brought together a very large number of lumbermen, representatives of pulp and paper companies and foresters from all parts of the province. Naturally the subjects discussed all held a bearing on the protection of the forests, but incidentally points of a more general character were brought out.

In a brief address, Mr. S. L. de Carteret, the president, indicated that progress had been made during the year, and he specially referred to the forest permit system of the Provincial Government, which had come to stay.

Mr. G. Piche, the chief forester of Quebec province, took the place of the Hon. H. Mercier, Minister of Lands and Forests. Mr. Piche read a comprehensive paper on "Our Forests." He remarked upon the extensive cutting of the big logs years ago and said it was not until 1900 that the mills had taken to use the small logs of a lesser diameter or of an inferior quality. The destruction by insects and fungi was enormous, and he was certain that the proportion of rot in the logs made to-day was so large that the percentage of good qualities of lumber turned out by some mills did not amount to more than one-third of the total output. If they added to all the adverse conditions, the fact that the huge mills established in the Province required enormous quantities of wood every year, it became evident that the situation required a careful survey. The situation was so serious that the present holdings of the companies would be exhausted inside of 20 years if they did not reduce their cut and purchase elsewhere the quantities of wood required.

#### Preventing Destruction of Forest Wealth

Mr. Piche then discussed various methods to prevent destruction of forest wealth. He pointed to the legislation of the Provincial Government, incidentally mentioning that the railway companies had greatly strengthened their fire-fighting forces. The fires in the Province were getting more dangerous on account of the increasing quantities of slash accumulated by lumbering operations, and this question should be faced at once. In the past the majority of the lumbermen had been occupied mainly with the improvement of their manufacturing processes, taking great care to produce the highest quality at the lowest cost: however they discovered that each year the cost of the logs increased while the average contents of the logs diminished and, in many cases, the savings made in the mills were more than eaten up by the increased cost of the wood. These facts compelled them to give more attention to the forest problem. Each company should know exactly the quantities of wood it possessed upon the limits and what was the annual capacity of the forests it controlled. Without these facts operations were conducted at random and that was why many companies found themselves before a situation more serious than they suspected.

The Government had passed a law obliging the operators to make inventories of their holdings, to present working plans, so that the amount of the annual cut could be regulated according to the productivity of the forest. Several companies had already started these technical studies, and the Government had received working

plans covering about 3,000 square miles of forest or 1/15 of the total area under license. The Government also required a logging plan which was checked on the ground and modified when advisable by the forest engineers of the department and of the company. In other words, the men in the field are getting all the necessary authority to devise the best methods to lumber, so that the operations, instead of diminishing the value of the forest, will leave it in a healthy condition and the rate of growth may be increased if possible, instead of being diminished. This new system had been tried this winter in various localities and appeared to be giving complete satisfaction.

#### Public Concern in Fire Protection

"Why is Forest Protection Necessary" was dealt with from various angles. Dr. C. D. Howe, University of Toronto, read a paper viewing the subject from the forester's point of view. He remarked that the operator was principally concerned in protecting the merchantable lumber, while from the forester's standpoint the protection of the cut-over and burned-over lands is much more important than the protection of standing timber. There was little doubt that forest fires were the chief factors in the deterioration of soil fertility and the repeated fire was again the most destructive agent. And this again, also indicated the importance of effective fire protection on areas that did not carry merchantable timber.

There were more than 100,000 people in Canada at work converting the forest products into wealth in some form or other. They were chiefly heads of families or the bread winners of families, thus representing probably a half million people dependent upon the forest for a livelihood. Were they worth while in their work? Were they worth while to the country? The great pulp and paper companies, the great lumber concerns would not exist many years longer unless there was more effective fire protection. In order to get more effective protection, the public must invest more money in it.

When they considered the area actually under license or pulp-wood concession, the amount expended on it as a whole averaged less than one cent per acre per year. In other words, they spent less than a cent an acre a year as an insurance rate on forest lands which supplies, at the present day, yielded products to the value of \$500,000,000 annually. The amount invested in protecting the supply of the wood-using industries was entirely inadequate. If the people of Canada thought it advisable to keep these industries a-going, they must pay more for forest protection than they were paying at present.

The operators' point of view was discussed by Mr. W. Gerard Power, who pointed out that anyone who contemplated investment in a forest property, was primarily concerned with the supply of timber available. The question of protection applied not only to plants but also to the water supply for getting the logs to the mills. He suggested that there might be some co-operative effort in the way of securing data with regard to insects—a sort of clearing house with technical men in charge.

Mr. R. P. Kernan, manager of the Donnacona Paper Company, Limited, declared that the operators were principally interested

from the financial point—they had their eggs all in one basket. Fires not only caused losses of standing timber but of the second growth. Everyone in the province was affected by fires in the forest but the operators were hit the hardest, often too in the matter of peeled pulpwood. The great point was to prevent fires, and in this connection Mr. Kernan advocated the education of the woodsmen in the matter of protection.

#### Prof. Leacock Could Not Build Henhouse

Professor Stephen Leacock, of McGill University, spoke from the public point of view. The address was in that whimsical humorous vein, so characteristic of Professor Leacock, but it also had a serious side. The speech was a parable of the henhouse which the Professor could not get constructed because of the rising cost of hemlock. He asserted that the prices of lumber, in fact of all commodities and of wages, must come down. Professor Leacock made a strong plea for the conservation of our forests.

At the afternoon session Mr. C. T. Allen, of the Western Forestry and Conservation Association, Portland, Oregon, read a paper on "Co-operative Forest Protection." He gave details of the organization in the Western States, the difficulties met with, and how the Association met them, particularly having regard to those who attempted individual fire protection of limits. He asserted that efficient fire protection work must necessarily be of a co-operative character. Mr. Allen also referred to the publicity work in educating public opinion. In the Western States, they dealt with the menace of insects and fungi in a co-operative way that had proved successful.

Lieut. R. B. Adams, of the U.S. Forest Service, reviewed the application of the air and signal service of the United States Army towards the observation and the reporting of forest fires. He also detailed the instruments used, and recorded the advances made in transmitting and receiving wireless telephone apparatus. In connection with this address, a receiving set was set up in the hall, and during the talk a message was received from Mr. Evans, of the St. Maurice Forest Protective Association.

#### Canadian Forestry Matters Reviewed

Further expansion in the activities of the Canadian Forestry Association was the keynote of the report of the annual meeting held at the Mount Royal Hotel, Montreal, on January 22nd. The progress made in seven years is indicated by the financial statements for 1915 and 1922. In the former year the income was \$5,269, while last year it had increased to \$59,320.

Mr. Dan. McLachlin, the president, in his address, declared: We may never be able to close a year without a bush fire, but thanks to the continued efforts of the Forestry Association and the awakened interests of the various governments, both Federal and Provincial, the efforts of the lumbermen and pulp mills are now more adequately supplemented and the fire hazard is being better controlled, for in the last analysis, unless the efforts of the men in the field, the timber operators, are supported with legislation changing as the conditions vary from period to period, the efforts of this association would be largely wasted. But happily that condition does not obtain, as today we have the most cordial co-operation between this association, the law makers concerned and the operators in the woods. This happy condition is most complete in the province of Quebec, where an able and enlightened forest service has placed on the statute books forestry legislation that is a shining example of foresight and a model to be followed by the rest of the Dominion."

The report of Mr. Robson Black, the manager, surveyed the work of the year.

During 1922 the Association made substantial development both in respect to amount and quality of the forest protection propaganda reaching the people of Canada, and in the revenues for the support of such work. In connection with the propaganda, Mr. Black expressed appreciation of the valuable co-operation of the press of Canada. The Forest Exhibits Car travelled 12,623 miles, while the tree-planting car covered a large area in the West. Two new undertakings aiming to stimulate the interest of the youth in Canada in forest conservation and tree-planting as a national cause were set in motion. The membership of the Association neither lost nor gained in 1922. The balance in hand at the end of the year was \$3,966.

The adoption of the report was followed by a discussion on two or three points. The efforts of the directors to educate the children in forest conservation was commended, as likely to show good results in the future. It was suggested that the law should be more strictly enforced in the way of prosecuting those responsible for forest fires. It was replied that the Association did some work in this direction, but it was difficult to find out the responsible parties. On the subject of the responsibility of the Federal Government for fires along the National Railway lines, it was stated that the Na-

tional Railways were doing their utmost to prevent fires.

The Hon. A. Turgeon, former minister of Lands and Forests for the Province of Quebec, was elected president for the new year, with Dr. Clifton D. Howe, Dean of the Forest School, University of Toronto, vice-president.

In the afternoon the Hon. W. R. Motherwell spoke on tree-planting on the prairies, while papers were read by Prof. J. W. Toumey, lately dean of Yale Forestry School, on "The Value of Research in Forest Production," and by Dr. C. D. Howe, on "Building Population by Building Forests."

#### Are Retailers Losing on Their Millwork?

A few months ago the "Canada Lumberman" published an article under the caption "Does it Pay the Retailer to Run a Planing Mill?" The contribution, it will be remembered, contained a symposium by retailers on the benefit of installing equipment for the production of millwork. The different views on the subject came from all parts of the Dominion and gave a fair idea of how retail lumber dealers were progressing with the millwork department as a part of their business. Taking a summary of the arguments pro and con it was apparent that the majority of retailers thought it best to have only one or two necessary pieces of equipment such as a power feed rip saw; a number also said it paid them to keep a planer or moulder to dress rough lumber, culled from low grade stuff that would otherwise have to be sold for rough boarding, and for other profitable work.

But there are undoubtedly many retailers who are trying to make a lot of their own millwork and may or may not know they are losing on it every time they enter a contract. The reason that retailers undertake the manufacture of doors, sash, casings, trim, etc., is a matter of service to their customers and to keep things going when the retail end is dull. But if the dealer can buy millwork cheaper from reliable mills, would it not lower his costs and enable him to turn his attention to the many opportunities of the retail end? Of course, there is always the special order to deal with, but this can also be obtained, from mills giving good service at reasonable prices. Special orders calling for quick delivery, cost more or should cost more, to pay for the time taken in making set ups, etc., wherever they are ordered, and the retailer would be in money in letting mills with their fast special equipment do this work also.

Our attention on this subject of retail dealers losing on their millwork, was renewed upon reading the cost studies appearing from month to month in the columns of the "Canadian Woodworker." These cost studies are actual jobs handed to the editor by operators including their actual cost. Voluntary estimates are sent in on the same job by other woodworkers, sash and door men and retail lumber dealers operating millwork plants. As an example of how unprofitable it is to try and make something as cheap as another man who is specializing in that article, let us look at one of the recent studies mentioned above. Estimates were sent in by eleven parties for the cost of 50 interior columns, 2 3/4" high over all, shaft 7/8" thick, 8 by 8" at base, tapered to 7" by 7"; cap and base 1 3/8" by 2 1/2"; cap and base mould 1 1/16" by 1 7/8" made of fir. The different items of cost included: material, waste, bench hours and rate per hour, machine hours and rate per hour, commercial burden. The lowest estimate was \$135 and the highest \$300.

These comparisons of estimates were originally meant to draw attention of woodworkers to their lack of cost knowledge. In our reference to the estimates we have another purpose. It is probable that there is considerable "guessing" in arriving at the cost as the difference between the highest and lowest cost was 122%. But glancing through the names of the estimators it is apparent that some of these men are in a more advantageous position to quote a better figure and still make a fair profit than several of the others.

But getting back to the realm of the retailer, what does this wide difference in cost estimating teach the owner of a small lumber business. Would it not pay him to look around and secure prices from mills specializing in the different items of trim. In many cases he could secure his requirements cheaper than he is now making them for, and also make his own prices more attractive, as a result. A number of firms spending their whole time on millwork are now issuing handy catalogues. No doubt they are prepared to offer a trade discount.

Of course, this opinion we know, will find exception among different sized yard-men but, as a rule, it is the intention of most retailers not to get too deep in the manufacturing end. The writer had occasion recently, to talk with a retailer who was operating a mill in connection with his lumber business. Upon being questioned about the plant, he said he would be glad to get rid of it, but could not see how he could disperse with it entirely. This opinion seems to be the most popular one, that of keeping only a few machines for making frames and small stuff and taking advantage of the facilities and prices of large mills operating on a quantity production basis.

### Getting Busy on Repair Work

February is a time when the lumber retailer may well look around, size up conditions for the approaching season and take stock of what business is likely to develop. In the rural sections there may not be many new structures in the offering, owing to the fact that farmers are getting a low price for their produce and live stock and most of them do not feel like launching out on a large structural scale until they receive a return for their goods that will bear comparison with what they have to pay for other requisites. They contend that the latter have not come down in price nearly as rapidly nor to the same extent as have the products of the soil.

There is always, however, a large amount of repair work done in every community early in the year and this may be well sought by the retail lumberman. He should impress upon the farmer that it is false economy to allow his buildings to fall into decay or dilapidation or his roofs to become leaky and old. It is a short-sighted policy for any yeoman to follow, and it should not require much persuasion on the part of the retail dealer to sell most any farmer some lumber for such depressing needs as repairs.

Of course this cannot be accomplished by the dispenser of wood products sitting around his office chatting or smoking all day, complaining of affairs going to the bow-wows and conditions being bottom-side up, at this period of the year. He must get out and make calls and become acquainted with the wants of the surrounding country. By venturing out in this direction and in that and meeting people, he soon begins to hear of things of interest which will no doubt, lead to future business.

Then some attractive and effective literature, with catchy headings, might also get in its leavening process. "Make those repairs now," "Get Busy Before the Spring Rush Sets in," "Don't Neglect that Roof until it is too Late," "The Longer the Delay, the Greater the Cost," etc. These points should be driven home and the effective announcement also made that repairs and alterations can be carried out when the weather permits, and the occasion to make them is when not in a hurry or rushed with other work. The proper time for the farmer to conduct such operations is between his busy seasons.

The repair business is one that is too frequently neglected. While the orders may seem small, in the aggregate they amount to a great deal, and where a farmer secures his 2 x 4's and 2 x 6's as well as his rough lumber for renovations, he is also going to make heavier purchases when requiring anything in the way of dressed stock, timbers, interior or exterior trim, flooring, etc. There are some farmers who are inclined to procrastinate on the principle that to-morrow will do for making repairs as well as today. They should be educated that there is no time like the present and that the old

aphorism of "A stitch in time saves nine," is as true in building terminology as in a sartorial sense.

Another service that the dealer can make known is that "no job is too small to receive prompt attention." It may be that some cedar posts, several bundles of lath, a bunch or two of shingles and a few boards make up only a comparatively trivial transaction, but the purchase will establish a link between dealer and consumer that will, no doubt, develop later into larger business relations. It is not alone upon present turnover that expanding businesses are created but upon potentialities of demand in the days to come. It is necessary for the retailer to have not only courage and initiative, but also imagination, visualizing what his town or his district will be five or ten years from now and seeing in prospect the new homes, barns, innumerable garages, stables, etc., which will dot the surface of the township in which he does business.

The retailer must feel that he is a part of the constituency in which he resides; that anything, which benefits the community at large, will result in, advantage to him, and vice versa. He should realize that he is a community builder and should see far beyond the mere taking in of so much cash. Let him establish a name and standing that are worth while. Of course, it will require work and pluck and persistency, but was anything worth while ever won that did not involve or entail action, thought, labor and zeal?

### Conventions that Got Somewhere

The annual conventions of the Canadian Lumberman's Association, which was held in Montreal, and the Ontario Retail Lumber Dealers' Association, which took place at Windsor, are now matters of history. Both were successful from the standpoint of attendance, interest, instruction and pleasure. Each gathering struck a new high note in outlook and achievement, and the members felt that basic conditions in the lumber trade are much better than they have been for years and that the future is encouraging. While the horizon is not as clear as the noon-day sun, owing to the European situation, still there are fewer spectres and with a stabilization of prices and an increased output to meet the call for forest products heard on all sides, there should be better results all around for the manufacturer, wholesaler and retailer.

Reports of the proceedings of the conventions which are appearing in this and the next issue of the "Canada Lumberman," are well worth a perusal as they afford an indication of what the lumbermen bodies are doing and demonstrate their worth and usefulness in the upbuild and expansion of Canada's pioneer industry.

In the selection of Angus McLean, of Bathurst, N.B., as president of the Canadian Lumbermen's Association, a tribute has been paid to a worthy citizen and progressive operator of the East who has long been prominently associated, not only with the lumber calling, but with pulp and paper activities. Mr. McLean will make a splendid presiding officer and a capable successor to A. E. Clark, of Toronto. Under his guiding hand the C.L.A. should enjoy a year of progress and development and make its influence and prestige more widely known and recognized.

The new head of the Ontario Retail Lumber Dealers' Association is K. J. Shirton, of Dunnville. He has been active in season and out of season in Association work and has never lost an opportunity to promote friendship, fellowship, co-operation and unity. His elevation to the highest office in the gift of the organization has been well earned. J. C. Scofield, of Windsor, was a live wire chief who kept things on the move, and Mr. Shirton will, no doubt, prove as active and aggressive in filling his shoes.

Much more might be said upon the benefit to be obtained from attending conventions such as the C.L.A. and the O.R.L.D.A. It is to be regretted that the membership of these bodies does not embrace everyone connected with the industry. They are in every way commendable and wide awake institutions who are seeking to do the highest good and render service in every possible way. Both bodies will, no doubt, witness large accessions to their ranks during the coming year. Active campaigns will be conducted to gather in the ranks those, who should be identified with institutions of such a forward character and wholesome influence.

The arbitration board has awarded \$651,484 to the Chicoutimi Pulp Company, Limited, under policies with thirty-two insurance companies for loss sustained through the fire which on July 8th last destroyed about 28,000 tons of mechanical pulp in the Chicoutimi Company's yards at Port Alfred, near Ha Ha Bay.

The Chicoutimi Pulp Company claimed \$1,010,201.31 fire insurance, but the insurance companies considered the demands made on the policies were too high, and arbitration was resorted to.

The majority report considered the value of the property insured was \$743,306 and amount of salvage \$91,822. This left \$651,484 as the amount of loss by fire, and constituted the court majority's award to the claimants.

# Reports Submitted at C.L.A. Gathering

The Committee on Legislation presented a brief report at the C. L.A. Convention in Montreal which was as follows:-

The principal subject which has engaged the attention of your Committee during the past year was in connection with the proposal of the Ontario Government to do away with the Doyle Rule and substitute therefor a content measurement. We regarded the proposal as being distinctly inimical to the interests of the lumber trade of the country, and whilst the suggestion was confined to the province, still it was regarded by your Committee as being of very vital importance to every lumberman in the country. Over thirty firms were represented at a meeting held in Toronto on November 8th and 9th, 1922, during which time the whole matter was thoroughly discussed and a memorandum drawn up and presented to the Prime Minister of the Province and his colleagues, including the Minister of Lands and Forests, November 9th. The result was that the Prime Minister plainly stated that in so far as existing licenses were concerned there would be no change unless it were by mutual agreement. Our president, Mr. A. E. Clark, suggested that a small committee of the lumber interests might be appointed to confer with the Provincial Government on matters pertaining to lumbering operations. The Honorable Prime Minister agreed with this and stated that he would be glad if Mr. Clark would name such a Committee, and on November 10th letters were written to the Honorable E. C. Drury and Honorable Beniah Bowman, naming the following gentlemen:-

John Black, J. R. Booth, Ltd., Ottawa; W. E. Bigwood, Graves, Bigwood & Co., Byng Inlet; Dan McLachlin, McLachlin Bros. Ltd., Arnprior; Z. Mageau, Mageau Lumber Co. Ltd., Field; Hon. Geo. Gordon, Geo. Gordon & Co., Cache Bay; G.B. Nicholson, Austin & Nicholson, Chapleau; J. J. McFadden, McFadden & Malloy, Blind River.

It was later suggested that the name of Mr. Geo. Gray, Supt. of the Spanish River Pulp and Paper Mills Ltd., Sault Ste. Marie, be added to this Committee, and the Honorable Ministers were advised accordingly.

We have no further communication from the Provincial Government in connection with this matter.

**WORKMEN'S COMPENSATION.**—There have been no changes in connection with this matter by the Provincial Governments, but the Labor Gazette of December 22nd, 1922, reports a meeting of the Association of Workmen's Compensation Boards of Canada. At their fourth annual meeting held at Edmonton, Alta., they adopted the following resolutions,—

1. That in all provinces where there is a Workmen's Compensation Board it is advisable that all accident prevention measures should be centralized and enforced by such Board.

2. That there should be no "clerical exclusions" under Workmen's Compensation Acts and that no separate rate should be applied to clerical workers.

3. That every Provincial Act should make provision for the rehabilitation of crippled workmen.

4. That it should not be necessary for Boards to give notice before entering judgment with respect to an overdue assessment under a Workmen's Compensation Act and that Boards should have authority to enter judgment for an overdue assessment by filing a certificate in the manner provided in the Acts of Ontario, Nova Scotia, British Columbia and Manitoba.

Your attention is called to the fact that at the last annual meeting of the Trades and Labor Congress it was unanimously adopted to demand the increase in compensation to the full one hundred per cent instead of as at present.

In the province of Ontario the record for 1922 is as follows,—  
"There were 50,411 accidents reported to the Ontario Workmen's Compensation Board in 1922, as against 45,191 in 1921, an increase of 5,220. The fatal accidents increased from 386 to 418. The number of accidents reported daily averaged 168 in 1922, as against 151 in 1921. Total claims paid in 1922 were \$5,692,896."

## Transportation Department Arena—Things done and Yet to Do

This was the full year's report of the department, presented by R. L. Sargent, Transportation Manager of the C.L.A., and dealt with a number of old and new subjects, including reduction in freight rates on lumber between points in Canada, demurrage, surcharge on freight charge, the proposed new rating on box shooks and told how carriers had instructed agents to reduce the charges to the basis of lumber rate and lumber minimum on any shipments on which the charges had been previously collected on the basis of the 10th class rate.

An important clause in the report was on the transit arrangement on lumber at Canadian National Railway stations in Quebec, New Brunswick and Nova Scotia. It reads as follows:—We have been successful in coming to an arrangement with the Canadian National Railways for the application of this transit arrangement to apply on traffic moving locally between points on the Canadian National, East of St. Rosalie Junction, Que., in the provinces of Quebec, New Brunswick and Nova Scotia, also Prince Edward Island. This arrangement was not previously published to apply on traffic moving locally between points in the Maritime provinces and as there appeared to be considerable need for the arrangement we ask the Canadian National to publish it and they agreed but intimated that the charge for the stop-off would be 2 cents per hundred pounds. This was not quite satisfactory to us inasmuch as the arrangement providing for stop-off at points in Ontario, etc., only carried a stop-off charge of one cent per 100 pounds, and after considerable correspondence on the subject it was agreed that the stop-off charge should only be one cent per 100 pounds. We sincerely trust that the adoption of this arrangement in the Maritime provinces will be of considerable assistance to our members in that territory.

Mr. Sargent then went on to refer to the new freight rates arranged in the East and said there are a number of subjects still in

hand with the carriers on which the department is either suggesting adjustment in the rates or the publication of satisfactory through rates.

Some of the subjects still open with the C.P.R. and the G.T.R. system were then outlined in the report as follows:—Through rates from points of the Dominion Atlantic Railways to Canadian and United States destination.

Adjustment in rates to points in Michigan, Ohio, etc.

The C.P.R. are at the present time working on a revision of their tariffs providing for rates on lumber and forest products to points in the United States, and it is expected that these tariffs, or at least one of them, will be issued very shortly and will provide for satisfactory rates to destinations in Michigan, Ohio, etc.

Through rates to and from points on the Quebec Central Railway where through rates are not already provided.

G.T.R.—(1) Rates from Grand Trunk Railway stations to points in Michigan, Ohio, etc.

(2) Re-adjustment in the rates to the United States points from G. T. Stations competitive with the C.P.R. where it is found that the G. T. rates are out of line.

In conclusion, Mr. Sargent referred to the proposed reduced rates for annual meetings, which he hoped to have effected by next year's convention dates. It was necessary to have 150 persons using a special arrangement in order to obtain reduced fares for the delegates and others accompanying delegates.

**HANDLING CLAIMS.**—During the past year we have handled two kinds of claims those which have been filed by the claimant and then declined by the carrier and finally turned over to us for further attention and those which were filed direct by this Department on behalf of the claimant. It was not until the last three or four months of 1922, that we were given an opportunity of handling any quantity of these claims. The total of claims collected, is there-

fore, small, only amounting to \$277.44 but, there are claims to the amount of \$855.97 still open with the carriers, with very good prospects of collecting all of them.

This service has been performed without extra charge to our members but, as the work increases and it is found necessary to employ additional help to carry out the service successfully, a small charge will be made in proportion to the amount of the claim actually collected.

**CHECKING RAILWAY FREIGHT BILLS.**—This subject has been brought to the attention of our members several times since your Transportation Department was formed and up to the end of 1922, only about fifteen members had taken advantage of this branch of the service. We have checked quite a number of freight bills for these members and as a matter of fact we have discovered some \$1,063.40 in overcharges and have submitted sufficient data covering each overcharge to enable the member to make his claim on the carrier. The largest of overcharges found for any one member was \$839.19, the other amounts for different members ranging from \$60.00 to as low as \$36. No doubt this branch of the service given by your Transportation Department can be of considerable assistance to you and the service is being performed without extra charge until such time as we can prove that the arrangement is of material benefit to our members. The work under this branch of the service is increasing rapidly as we have at the present time some hundreds of expense bills for checking and expect to be in a position to make considerable headway with them during the next month or six weeks. If, within the next three or four months we find that this branch of the service

R. L. Sargent, Ottawa, Ont.  
Transportation Manager of C.L.A.

has proved of material benefit to those using it, some arrangement will be made whereby a charge will be assessed for the work in proportion to the amount of the claims actually collected from the carrier.

**EMBARGOES AND CAR SUPPLY.**—We have devoted considerable time to the subject of car supply and embargoes and it was only by keeping in close touch with the carriers and also with the Railway Association of Canada, that we have been able to come to the assistance of our members who gave us the opportunity of doing something for them in these matters. The car shortage has to some extent been relieved and we look for a still greater improvement in this respect from now on. The embargoe situation is still a very aggravated one, showing very little improvement, this is a situation which neither the shippers nor the carriers in Canada can control but we feel certain that our friends on the other side of the line are doing everything possible to relieve the existing conditions, and we do know that they are being given all possible assistance by the Canadian Carriers in this matter.

**RATES QUOTED TO MEMBERS.**—During the year 1922 we quoted a total of seven hundred and sixty-eight rates to our members as part of the service to this Department.

**INVESTIGATIONS AND INQUIRIES ANSWERED.**—During the year we dealt with and answered one hundred and nine separate inquiries and in a number of cases conducted investigations into various transportation problems not including rates quoted to members.

Our members are gradually commencing to appreciate that the Transportation Department is for their own special benefit and are making freer use of the various branches of the service which it

gives. There is one point which we would like to bring to your attention at this time which is that we do not think that the circulars from this Department are given the attention they deserve, particularly those circulars which ask for specific information or a reply of any nature. Out of a membership of about one hundred and ninety we have only been receiving on an average of thirty to forty answers to the circulars, this is not enough and we feel that it is only necessary to bring the matter to your attention at this time and there will be considerable improvement in the future.

### The New President of the C. L. A.

Angus McLean, the newly-elected president of the Canadian Lumbermen's Association, needs no introduction to the readers of the "Canada Lumberman." For a number of years he has been an active member of the C.L.A., being vice-president during the term just closed. He has also been intimately associated with the Canadian Pulp & Paper Association. In the bustling town of Bathurst, N.B., where he resides, his organization has built up great lumber, pulp and water power interests and is now adding to the industrial expansion of the place by the erection of a paper mill which will turn out about 50 tons of newsprint daily and be the first one of its kind in the province. Good progress is being made on the work. He lately celebrated his 63rd birthday and was born at Thurso, Que., his father being Donald McLean of that village. The latter was engaged in the timber trade and for a number of years took rafts of square and flatted pine and cedar down the Ottawa River to Lachine and Montreal. The rafts were produced during the winter months, and the present head of the C. L. A. made his first jaunt to the commercial metropolis on this water transportation vehicle with his father from Thurso in the spring of 1874. Just 49 years later Mr. McLean arrived once more in Montreal and was this time honored with the presidency of the Canadian Lumbermen's Association, the highest position in the gift of the lumbermen of the Dominion. His career has been one of steady advancement. He began in 1879 by shipping lumber for James MacLaren & Co., of Buckingham, Que., and later bookkeeper for J. A. Cameron & Co., North Nation Mills, Que. In 1887 he joined W. C. Edwards & Co., at their plant in Rockland, Ont., where he served as accountant for eight years.

In 1895 the subject of this reference linked forces with his brother, Hugh McLean, and under the firm name of Hugh McLean & Co., they were in business at Buffalo, N. Y., fourteen years when Angus returned to Canada to become general-manager of the Bathurst Company. He was subsequently elected vice-president of the company as well as general-manager, and last year was made president, succeeding the late Hon. Senator Edwards of Ottawa.

Mr. McLean is associated with several organizations other than the Bathurst Company, among them being Hugh McLean Lumber Co., of Buffalo, of which he is president; the Haynes Lumber Co., of North Tonawanda, N.Y., and the Wood-Mosaic Co., of New Albany, Ind. He is vice-president of both of these concerns and a director of the Canada Cement Co. A genial, approachable gentleman Mr. McLean makes friends on all sides, and his chief recreation is golf. He is a member of several clubs, including St. James, Montreal, Rideau of Ottawa, and the Garrison, of Quebec. In religion he is a Baptist and in politics, well you will have to guess. Under his direction the C.L.A. should continue to prosper and expand.

First Errand Boy: "Some terrible things can be caught from kissing."

Second Errand Boy: "Right! you ought to see the poor fish my sister caught."

Waiter—"Sir, when you eat here, you need not dust off the plate."

Customer—"Beg pardon, force of habit. I'm an umpire."

Two gentlemen riding on a train were both very much intoxicated.

First Gent. "What time is it?"

Second Gent (after extracting a match-box from his pocket with much exertion, and gazing at it intently): "Thursday."

First Gent: "My heavens, I've got to get off here."

"I gi'e the wee laddie a shullin' pocket money every week."

"Mon, that's a lot for him!"

"Aye, But I mak' him put it in the gas-meter. He thinks it's a money-box!"

# A Stranger Goes to the Windsor Convention

By Scrutator

I was reading in the "Canada Lumberman" a few weeks ago about this big retail lumber dealers convention to be held at Windsor. Now I've been doing a lumber and planing mill business up in this neck of land for twenty-five years without the help of any association and I guess another twenty-five would see me just as well off.

But I got reading bits out of the lumber magazine and about this gang of retailers going to have a convention down at Windsor. It said that every retail lumber dealer in Ontario was invited to come and bring his family, and told all about the sights to see in Detroit. Right there I decided to sneak off without any of the women folks. I couldn't take 'em all because there's four around our establishment. Besides I wasn't sure how this convention was going to suit me. There's a lot of stories going, about fellows sitting around smoking cheap cigars and spending most of the time cussing the government, wholesalers and manufacturers and trying to tell one other how they should run their business. I'm going to be frank, this trip down to Windsor appealed to me more as a mid-winter holiday.

I fixed everything at the mill so that things would run smoothly for three or four days and slipped out of town on the six forty. When the train was pulling out of town and I saw old Ned Cross, my competitor, working in his yard, a guilty feeling came over me like the fellow who was letting the other man do all the work. But I got thinking that this was the first holiday for me in three years and no matter what good came of it, it was a day or two off anyway. This kind of cheered me up and I went into the smoking room and lit up one of those cigars Charlie Willis gave me for Christmas. By nature I'm not gabby with strangers, but I got chatting with a fellow in there who was good company and before long we were talking lumber and found we were bound for the same place. This fellow was already a member of this Retail Association and from the way he went on about this convention, you would actually think that one could enjoy themselves at it.

## The First Impressions on Arrival

When we arrived at Windsor there was something unusual going on. I never saw so many people standing around doing nothing. The streets were lined as if there was a parade going to happen. At first the clerk in the hotel (it was a new one, called the Prince Edward) didn't want to give us any accommodation, said they were full up. But my partner informed him that we were with the retail lumber dealers' convention. He brightened up when he heard that as if somebody had supplied the lumber for the building free, and told one of those nigger boys to show us to room 809. When we were getting straightened away up in the room I noticed there was a solemn cortage going on down in the street and just then my partner, who was reading a Windsor daily newspaper, said it was the funeral of the late C. W. Kennedy, Minister of Railways, and the whole city was out to pay him its last respects.

When we got downstairs again, there was Willy King, our prime minister and the rest of the Ottawa cabinet standing around the lobby. My partner introduced me to his retailer friends and we registered with the secretary. On the mezzanine floor of the hotel, a number of manufacturers had exhibits including Bird & Son, of Hamilton, prepared roofing; Laminated Materials, Ltd., New Westminster, B.C., plywood manufacturers; Laidlaw-Belton Lumber Co., Sarnia, displaying an attractive line of doors; Seaman, Kent Co., Toronto, hardwood flooring and the B.C. Lumber Commissioner, 51 Yonge St., Toronto.

My partner was anxious to see the new plan service of the association so we looked in at that too. Those fellows certainly had some nice illustrated plans with the materials required and corresponding prices which they guarantee. My friend ordered the service on the spot and since then I've sent in my order too. If I don't make these contractors

around here eat out of my hand I'm mistaken. A few of those flashy billboards around town will earn an announcement from the Methodist pulpit.

## Getting off to Splendid Start

At two o'clock there was a big crowd in the convention hall of the hotel and everybody seemed anxious to get started. The meeting was opened when Rev. Robt. Bennie, of Leamington, led the dealers in prayer which was followed by Mayor Wilson, of Windsor, who welcomed them to the Border Cities. The president of the association, Mr. Scofield, was the next speaker, I was informed by my friend. After he had finished his short address I felt there was something being overlooked when I wasn't a member of an association with a president who could talk like that. But I was only starting to see light. Subsequently the business reports were read and the president asked F. B. VanDusen of Brockville to lead a discussion on trade ethics.

Before then, I had only a faint idea what ethics represented to retail lumber dealers, but it's clear now. There were some ideas presented that made a fellow like me wonder how I had nerve to go on by myself without helping to untangle the natural difficulties of the trade. One gentleman read a list of materials telling how a consumer had inquired for a price on them from ten dealers in western Ontario. The vast difference in quotations sent to him would seem to answer the question why the public are skeptical about lumber prices. Most of the men who spoke on the different subjects introduced themselves when they got on their feet, and let me know what part of the land they hailed from.

Ed. Rathbone, Toronto, said that many dealers used their hemlock as a bait, selling it at cost in order in order to draw the millwork business. No wonder a uniform price was so difficult when business was done on this basis. John C. Gilchrist, Toronto, said he went to three men to buy iron piping and each one gave him the same price. This illustrates how other lines of industry are co-operating toward uniformity in business practice.

Of course, such close prices are not possible in the lumber industry but methods could be a whole lot more uniform with a little co-operation. Just about this time I was thinking if all the discussions were as good as this one why I might stay another day.

E. C. Russell, of Walkerville, thought that standard sizes would be a big help in making a more uniform price. The next speaker was C. M. Canfield of Bird & Son, Hamilton, who told us about how they make prepared roofing. Thus ended the first day and I went down and told that boy at the desk that I would be in room 809 for another day.

## Greater Need for Accident Prevention

The next day the hall was crowded again at ten o'clock and the secretary read a paper on insurance and compensation which explained where the majority of accidents happened around the yard and factory and the necessary steps that would relieve the risk of injury to the employees. This was interesting to me, for just a few weeks back one of my men injured his hip and was on the shelf for a couple of weeks.

The next discussion was one that I had never really given much thought and the ideas presented interested me greatly. It was a talk on financing home construction led by S. Herath of Ojibway. He said that Canada needed 52,000 homes each year at a cost of \$2,000,000 and was far behind her necessary building programme. The average person found it difficult to obtain the credit, at a moderate cost, to build a home and the thought of a mortgage frightened many prospects away. He explained why building and loan associations couldn't be operated in Canada at present. Corporations of this kind were required by law to have a capital of \$300,000 with \$100,000 paid up. In the United States a \$5,000 building and loan association was protected

by the government. He suggested that the Ontario government should be approached to amend the law so that this great industry could strike its stride. He said forty other allied industries would be interested in associations of this kind. In explaining the system of building and loan associations, he said a man joining was given expert advice as to size of home he should undertake. It was a general rule that a man should only undertake a home that would cost two and a half times his annual income. This would be an improvement over some housing schemes we have had experience with.

#### What the Detroiters are Doing

After the morning session the president told us we were all invited to have luncheon with the Border Chamber of Commerce. George Howenstein, secretary-manager of the Detroit Lumber Dealers' Association, addressed the members and retailers and outlined the ideals of the association in the city across the river. He emphasized that price fixing was not a part of their programme whatsoever, as the public seemed to think. On the contrary it was in the best interests of the retailer to protect his customers from speculators, who, in good times, strive to obtain an unfair profit. They also, as a body, study economic practice, efficient cost methods and try to give their patrons an idea of how prices will fluctuate, for them to purchase accordingly. Mr. Howenstein also added that those who were waiting for lower prices in order to build cheaply were letting the best period slip by. "Prices can hardly drop now," said the secretary, "in fact we are looking for a sharp rise during the first six months of this year." He also stated that Detroit dealers have large stocks on hand, bought at last year's prices and so will be able to protect their customers against the anticipated advance. "That is how we try to work," he concluded.

Believe me that was one nice noon hour and I came away feeling particularly fit to listen at the afternoon session. At two we got started again. I had been hearing and reading a lot about cost accounting systems before coming to the convention, but most of them were too elaborate for my business. M. R. Bogart, of Chatham, was chairman of the discussion and explained how cost keeping had nothing to do with the amount of profit made, but was merely a safeguard from selling below cost. One of the members said he had installed a special cost system but it was not suited to his size of business. F. B. Van Dusen, of Brockville, explained the cost system his son, H. F. Van Dusen, had installed for him. They kept job sheets with the amount of material, the number of hours of each man working on the job, which showed the exact cost of each operation. Mr. Van Dusen stated, however, that the factory to him was a necessary evil and he would gladly be rid of it.

#### Knowing Where Business Stands Daily

W. M. Tupling of Orillia, explained the system in the plant of J. R. Eaton & Sons. The payroll which was a fairly large one was distributed so that each man's wage was charged to the department in which he was employed. Bench burden was charged to bench work, machine burden to machine work and so on. Office salaries and administrative expenses comprised the commercial burden and were kept separate from the factory or production burdens. "This system," said Mr. Tupling, "enables us to know how we stand at the end of each day if necessary."

F. B. Van Dusen was skeptical about the result of getting all retailers to agree on a uniform cost system. Geo. S. Zimmerman of Tavistock, believed that if fundamental rules of sound cost keeping were mutually understood by the dealers it would be a big step toward uniformity in selling prices. He moved that a committee be appointed to study a simple cost system applicable to any size business for the approval of the members.

By this time I was actually getting enthusiastic over this convention. That idea about uniform costs was a good one. If prices were more near a level there wouldn't be so much shopping around by the public, price cutting wouldn't be so prevalent and every one would know where they stood. Dealers would think twice before selling below cost if they had the cold figures before them.

Andrew Wise, of St. Catharines, told the retailers about

an article in the January 1st edition of the "Canada Lumberman" which outlined a correct and simple method of arriving at a fair sales price and illustrating the fallacy of guessing at a selling price.

#### No Long Winded, Dreary Talks

Funny thing about this convention, one didn't get tired listening to the different men, because they didn't drag out what they had to say. Up on the president's desk were two electric light bulbs. One was just plain and the other was red. When a man had aired his thoughts for nine minutes the white light went out and the red one was flashed on. This meant only one minute more to hold forth and most of the speakers took the hint.

The apprentice problem was directed by Robt. Bennie of Leamington, a veteran in the industry. He outlined the menace of not teaching intelligent boys the trade. J. T. Wallace of London, said the mill men were to blame themselves for not making the calling attractive. Better wages would have to be paid the boys and the dignity of the trade raised. The value of technical schools was discussed. Some were not in accord with these institutions and their methods, but the majority had words of praise for the samples of work turned out by these schools. J. B. Mackenzie of Georgetown, said he gave prizes at the fall fair in his district for cabinet work and in that way obtained apprentices for his plant. He also said in order to get the older men to take pains in teaching the boy, he offered them a bonus. This increased the efficiency of the boy in the bargain.

K. J. Shirton of Dunnville, in opening a discussion on the value of the Shippers' Rating Bureau, handed around blank rating forms for inspection by the members. The quality of the grading it was agreed was the chief fault to be found with shippers and it was the general opinion that some check up should be introduced. It was decided not to form a shippers' rating bureau, but blank forms will be issued the members on which they can submit complaints of certain shippers for the secretary to investigate.

#### Getting Fixed Up for the Banquet

In announcing the next item on the programme the president told us it was nearly six o'clock and that this would be the last question discussed on the afternoon's programme, as the annual banquet would be held at six-thirty.

Geo. H. Arnott, Superintendent of the Windsor Lumber Co. in his talk on accident prevention brought up many points and forcibly illustrated what a thief carelessness is, both to employer and employee. He also explained how the systematic arrangement of machines in the factory resulted in less congestion and accidents.

Clarence de Fields, Fire Chief of Windsor, spoke to the retailers briefly on the care of fire extinguishing equipment and how orderliness about the plant saved many dollars' loss in the case of fire.

The meeting adjourned and we went up to our room and got straightened away for the banquet. This is an annual affair, they tell me, and generally catches the retailer at his best. Our old friend Jack Miner of Kingsville, the man of a thousand animal stories and a funny fellow called Douglas Malloch from Chicago entertained us.

L. L. Brown of Toronto, showed some pictures on the canvas of how they cut and yard the big trees in British Columbia. In between times an orchestra played some tempting music for those who wished to dance. We didn't do any dancing, but did a whole lot of listening and some eating.

I came away thinking what a fine bunch of fellows the men in my line of business are. We came to the convention, all of us, to learn ways or create means whereby we could increase our business, but after all wasn't it an honest endeavour to be of more service to our communities.

#### What Legitimate Retail Dealer Is

Next day we gathered together again and A. R. Sanders, of St. Thomas, opened a talk on the relation of wholesalers, retailers and contractors. He emphasized how wholesalers should, in the interest of the industry, be careful that they are doing business with strictly retail lumber dealers. Discussion developed as to what was considered a legitimate

retail lumber dealer. The following resolution was adopted: Resolved that any person, firm or corporation carrying an assorted stock of lumber, lath and shingles and interior trim, reasonably commensurate with the needs of the community in which they do business. This Association puts itself on record as considering the following legitimate customers for retail lumber dealers only,—contractors, consumers and manufacturers using one or two carloads per year.

It was resolved that Secretary Boulton be instructed to send a copy of the resolution to all wholesalers and manufacturers. This was certainly a step forward in pointing out to the wholesalers who's who.

We have been hearing much about standardization these days. W. M. Tupling, of Orillia, gave some very pertinent slants on this question. He said much of the waste was created in the architect's office. John C. Gilchrist, of Toronto, pointed out that it was the architect's very life to produce originality. It was the popular opinion, that in many cases where uniform sizes, especially in mouldings, could

be used without clashing with the originality of the design, they should be and unnecessary waste eliminated.

#### Guess Things Were Worth While

President Scofield spoke briefly on the value of a trademark for the Association, and it was decided to leave the matter in the hands of the new executive. After the election of officers, votes of thanks were extended to those who had worked so unselfishly to make the convention a success; the speakers; the entertainers; L. H. Richards, of Sarnia, for his good work as chairman of the summer outing committee; the trade and daily press for reporting the convention. The members then rose and sang, "God Save the King."

Coming home on the train I remembered how I had consoled myself with the thought about taking a short vacation. But those three days had been chuck full of business. They were just as important to me, as I look back on them now, as days spent looking over some new time or labor-saving equipment for my mill.

## Delegates Present at Ontario Convention

Aitchison, W. J., Aitchison & Co., Hamilton.  
 Barrett, E. M., Barrett Bros., Ottawa.  
 Bartlett, T. H., Beaver Co., Limited, London.  
 Belton, George H., George H. Belton Lumber Co., London.  
 Bennie, A., Ludlam-Ainslie Lumber Co., Leamington.  
 Bennie, Robert, Ludlam-Ainslie Lumber Co., Leamington.  
 Boake, V. E., Boake Mfg. Co., Toronto.  
 Bogart, M. R., S. Hadley Lumber Co., Chatham.  
 Bolton, R. S., Villeneuve Lumber Co., Walkerville.  
 Bowden, H. V., Bowden & Sons, Lansing.  
 Branch, James, Windsor Lumber Co., Windsor.  
 Braniff, C. J., MacLaren Lumber Co., Brockville.  
 Coates, Chas., A. Coates & Sons, Burlington.  
 Conklin, W. T., Conklin Planing Mills, Kingsville.  
 Clarke, B. F., McPherson & Clarke, Glencoe.  
 Cluff, J. J., N. Cluff & Sons, Seaforth.  
 Cucksey, W. L., P. G. Piggott Lumber Co., Chatham.  
 Delaplante, Bert., Beaver Lumber Co., Hamilton.  
 Doty, C. F., Davis & Doty, Oakville.  
 Dryden, R. G., R. G. Dryden, Toronto.  
 Downe, P., Conklin Planing Mills, Kingsville.  
 Dunnett, Chas. S., Walter T. Piggott Lumber Co., Windsor.  
 Fletcher, J. A., Fletcher Lumber Co., Windsor.  
 Foales, A. E., Shultz Bros., Brantford.  
 Forster, G. H., W. T. Piggott Lumber Co., Windsor.  
 Fothergill, J. E., Conklin Planing Mills, Kingsville.  
 Free, James, Mimico.  
 Gardiner, James, Gardiner & Co., Galt.  
 Gilchrist, J. C., Gilchrist Lumber Co., Toronto.  
 Gilchrist, R. S., Boake Mfg. Co., Toronto.  
 Gillies, P. J., Laidlaw-Belton Lumber Co., Sarnia.  
 Goatbe, John, Comber Planing Mill, Hamilton.  
 Goatbe, S. L., Comber Planing Mill, Comber.  
 Griesinger, W., Windsor Lumber Co., Limited, Windsor.  
 Hadley, Chas. S., S. Hadley Lumber Co., Chatham.  
 Hadley, S. C., C. & J. Hadley, Chatham.  
 Hadley, W. A., S. Hadley Lumber Co., Chatham.  
 Hale, A. F., Kernohan Lumber Co., London.  
 Harrison, W. H., Niagara-on-the-Lake.  
 Hollingsworth, F. E., Soo Lumber & Mill Co., Sault Ste. Marie.  
 Hubbell, Chas., Chas. Hubbell, Thamesville.  
 Ingleby, C. E., Ingleby-Taylor Co., Brantford.  
 Irvin, J. C., Irvin Lumber Co., Toronto.  
 Jull, H. A., Ingleby-Taylor Co., Ltd., Brantford.  
 Kennedy, A. D., Thunder Bay Lumber Co., Port Arthur.  
 Kernohan, George N., G. N. Kernohan Lumber Co., London.  
 Laidlaw, R. A., R. Laidlaw & Co., Toronto.  
 Lawson, Chas., Alliance Lumber Co., Hamilton.  
 Ludlam, Stewart, Ludlam-Ainslie Lumber Co., Leamington.  
 Macdonald, A. C., G. W. Gardiner & Son., Galt.  
 McDonald, Martin, Thunder Bay Lumber Co., Port Arthur.  
 McEachren, D. J., Alvinston.  
 McGibbon, J., McGibbon Limited, Sarnia.

McKenzie, J. B., Georgetown.  
 MacPherson, G. D., G. D. MacPherson Lumber Co., Merlin.  
 MacPherson, J. A., G. D. MacPherson Lumber Co., Merlin.  
 Morris, E. C., Wallaceburg Lumber Co., Wallaceburg.  
 Murphy, E., E. Murphy, Mount Forest.  
 Naylor, E. A., Naylor-Osborne Co., Tecumseh.  
 Naylor, J. A., Naylor-Osborne Co., Essex.  
 Naylor, J. L., Naylor-Osborne Co., Essex.  
 Osborne, A. W., Naylor-Osborne Co., Sandwich.  
 Patterson, Thos., Patterson & Crosthwaite, Hamilton.  
 Patterson, T. A., Mickle, Dymont & Son, Toronto.  
 Piggott, P. G., P. G. Piggott Lumber Co., Chatham.  
 Piggott, W. T., W. T. Piggott Lumber Co., Windsor.  
 Poisson, E. C., E. C. Poisson Lumber Co., Ford.  
 Pounder, T. A., Pounder Bros., Stratford.  
 Press, R. J., Alliance Lumber Co., Hamilton.  
 Rathbone, Ed., George Rathbone & Son, Toronto.  
 Richardson, Gordon, Richardson Lumber Co., Tilbury.  
 Richards, L. H., Laidlaw-Belton Lumber Co., Sarnia.  
 Rodgers, J. H., Ball Planing Mill Ltd., Barrie.  
 Rose, A. G., James Davidson's Sons, Ottawa.  
 Russell, E. C., Walker & Sons, Walkerville.  
 Sanders, A. R., Sanders & Bell, St. Thomas.  
 Saundercock, George, Windsor Lumber Co., Windsor.  
 Saunders, Wm., Wm. Saunders, Dutton.  
 Savage, W. E., Mimico.  
 Scofield, J. C., Windsor Lumber Co., Windsor.  
 Shirton, K. J., Wm. Shirton Lumber Co., Dunnville.  
 Smith, E. S., Dominion Lumber & Coal Co., Hamilton.  
 Taylor, W. J., Watson & Taylor Lumber Co., Ridgetown.  
 Tennant, R. B., R. B. Tennant & Co., North Bay.  
 Thomson, W. H., Thomson Bros., Port Credit.  
 Truax, H. E., Walkerton.  
 Tupling, W. M., J. R. Eaton & Sons, Orillia.  
 VanDusen, F. B., Brockville Lumber Corporation, Brockville.  
 VanDusen, H. F., Brockville Lumber Corporation, Brockville.  
 Villeneuve, Felix, Villeneuve Lumber Co., Walkerville.  
 Villeneuve, Leo, Villeneuve Lumber Co., Walkerville.  
 Villeneuve, Walter, Villeneuve Lumber Co., Walkerville.  
 Wallace, J. T., Dymont Baker Lumber Co., London.  
 Watson, N., Watson & Taylor, Ridgetown.  
 Watt, Allan, Watt Milling Co., Toronto.  
 Wilby, Miss Marion, Windsor Lumber Co., Limited, Windsor.  
 Wellman, Chas., Conklin Planing Mills, Amherstburg.  
 Williamson, F. S., W. Williamson Lumber Co., Toronto.  
 Wise, Andrew, Henry Wise Lumber Co., St. Catharines.  
 Wright, R. T., Thorndale.  
 Zimmerman, G. S., Zimmerman Bros., Limited, Tavistock.  
 Armstrong, T. A., Seaman-Kent Co., Toronto.  
 Barclay, L. D., Canadian Western Lumber Co., Toronto.  
 Barnsdale, A. C., Bird & Son, Stratford.

 Woodcock, A. K., Creosoted Products, Limited, Toronto.  
 Brown, L. L., B. C. Lumber Commissioner, Toronto.  
 Hardy, E. D., Can. Lumbermen's Insurance Exchange, Ottawa.  
 Lynn, A. W., "Canada Lumberman," Toronto.  
 Meinzer, G. T., O. R. L. D. A., Toronto.  
 Roberts, A. E., B. C. Lumber Commissioner, Toronto.  
 Rutter, F. M., C. P. R., London.  
 Ritchie, W. B., Universal Car Agency, Windsor.  
 Scherbarth, F. W., "Canada Lumberman," Toronto.  
 Walker, L. C., Forest Products, Limited, Toronto.  
 Artz, John C., Lumber Mutual Fire Ins. Co., Rochester, N. Y.  
 Bowes, C. L., Service Department, Chicago, Ill.  
 Carson, A. A., Curtis Detroit Co., Detroit, Mich.  
 Daugharty, Vilas, Detroit, Mich.  
 Dickheiser, H., Nat'l. Magnesite Stucco Co., Wyandotte, Mich.  
 Hager, A. J., Mich. Retail L'b'r. Dealers' Ass'n., Lansing, Mich.  
 Shaw, John R., Detroit, Mich.  
 Spitzer, M., Humbolt Redwood Co., Detroit, Mich.  
 Whiting, F., Nat'l. Magnesite Stucco Co., Wyandotte, Mich.

### Western Lumbermen Adopt Code of Ethics

Recognizing the mutual dependence existing between themselves, the manufacturers, jobbers and wholesalers of products in which they dealt, and the general public, the members of the Western Retail Lumbermen's Association, at their recent convention in Winnipeg, adopted a code of ethics, or declaration of principles, as a guide for the maintenance of correct business standards.

The code had been considered by the board of directors and was presented by the president. It establishes the ethics which should exist between the lumbermen and those from whom they bought, those to whom they sold, between themselves and their relations to the public. It recognizes the interdependence of one on the other of all engaged in the business of manufacturing and distributing building materials, and that proper business standards could be maintained only by a sincere acceptance of such standards by the individual members of the industry.

The chief principle evolved between the members and those from whom they bought is that no misleading statements are to be made to obtain lower prices. Another one is that purchasing agents should not accept any gratuity, commission or allowance in connection with any purchase, and breach of that provision should constitute grounds for instant dismissal.

In regard to those to whom the lumbermen sell materials, the code declares unequivocally in favor of a one-price-to-all policy.

As the code affects the relationship between the lumbermen and the public it accepts the manifest duty of all citizens to take an active interest in all matters that affected the welfare of the community.

### Mr. Hamber Optimistic on Lumber Outlook

Mr E. W. Hamber, president and managing-director of the British Columbia Mills, Timber & Trading Co., of Vancouver, and a director of the Dominion Bank, referred in some detail to business conditions in British Columbia in the course of his address at the bank's annual meeting held recently in Toronto. He said that production in the lumbering and associated industries was steadily expanding; the importance of prosperity in the lumbering industry could be best realized, when it was understood that some 30 to 40 per cent of the total industrial wage of the Province was derived from these associated industries. Some two billions of feet was the production for 1922. The increase in output represented by these figures was derived in large measure from increased overseas trade, with China, Japan, Australia, New Zealand and India. Not only has a large percentage of this increase come from new business created overseas, but has been business taken from competitors to the south of the international boundary line, and all, too, without any preferential arrangement with these countries.

Mr. Hamber attributed this increase in part to the advent of the Canadian Government Merchant Marine. He had it on good authority, he declared, that the Government service, operating out of Van-

couver, had in the past year paid its operating charges and from the present outlook, as far as the Pacific coast was concerned, should in the near future, give adequate returns on the investment.

He referred to the "almost revolutionary effect of trade and commerce that the Panama Canal is having on the Pacific coast," and pointed to the heavy growth of grain shipments from the port of Vancouver, which should reach a total of nearly twenty-five million bushels in the 1922-23 crop season, as compared with a movement of one million bushels in 1921.

### Newsy Paragraphs of the Trade

A. E. Clark, of Toronto, late president of the Canadian Lumbermen's Association, and Mrs. Clark are leaving for Florida where they will spend a few weeks. On his return from the convention in Montreal Mr. Clark was taken ill and had to remain at home for a couple of weeks, suffering from an affection of the antrum.

The many friends of A. M. Kerr, secretary of the Preston Woodworking Machinery Co., Preston, Ont., will sympathize with him in the death of his wife. Besides her husband, she leaves a family of three small children.

The False River Co., Vancouver, B.C., has started the rebuilding of its sawmill which will cost about \$15,000.

Under the new commercial treaty with France, logs and rough and squared wood from Canada get the benefit of the French minimum tariff.

Two widely known lumbermen retained their seats in the recent Provincial contest in Quebec. They are R. Tourville, elected for Maskinonge, and G. E. Ouelette, elected for Yamaska. Both are directors of the Tourville Lumber Mills Co., Limited.

A. E. Reesor, of the Glen Willow Mills, Cedar Grove, Ont., states that he does not handle much lumber personally but does considerable sawing for the farmers in and around Markham and Locust Hill. Judging by the way that the logs are coming it at present, Mr. Reesor says that he is looking for a larger custom cut than he has had for several years. The large local supply will considerably lessen the demand for lumber shipped into that district.

Alex. Fenton, of the Riordon Co., Limited, is taking a month's rest in the Laurentian Mountains. He has not been well for the past few weeks.

Fred J. Cummings, of the Kingston Road Lumber Co., Toronto, and Mrs. Cummings, have been on an extended trip to the Pacific Coast.

Gagnon & Freres, Limitee, of Matane Rimouski district, Que. have been granted a provincial charter to buy, sell and manufacture lumber, shingles, pulpwood, etc. The incorporated company, which succeeds H. Gagnon & Freres, has an authorized capital of \$99,000.

## Progressive Lumberman Who Has Risen Steadily

Mr. J. J. McFadden, Spragge, Ont.

At the head of the newly-incorporated firm of J. J. McFadden, Limited, Spragge, Ont., is J. J. McFadden, who for many years conducted operations under the name of McFadden & Malloy. As stated in a recent issue of the "Canada Lumberman," J. J. McFadden, Limited, has an authorized capital of \$5,000,000. J. P. Gillies is vice-president of the organization, R. F. Grimes managing-director and P. T. Seymour secretary. In connection with the firm, it may be stated that Mr. McFadden is a man of a retiring disposition who has plied his calling for many years quietly and persistently and to-day is one of the biggest and most successful operators in the Dominion. Of Irish extraction, he was born in the pretty little town of Aylmer, Que., on the

shores of Lake Deschene. There he went to school, played truant and did most everything else that the active, healthy boys of that day engaged in. Young McFadden was fond of hanging around the local sawmill and always liked to hear the hum of the industry. He learned to run the logs in his bare feet and loved paddling about using some of the big fellows as a craft. When eleven years of age his mother died and he then went to Renfrew where he attended school for several years. Mr. McFadden secured his first position, outside of Renfrew, when eighteen years of age, with J. R. Booth as camp clerk on the Madawaska limits. He soon mastered other activities and was able to perform any duty in connection with bush work from the felling of a tree to the driving of a team. He also started in to measure logs and became a scaler for Mr. Booth and, was later promoted to the position of chief clerk at one of the depots on the limits.

After four years' service with Mr. Booth, the subject of this reference became bookkeeper and scaler for Hale & Booth, the firm being composed of Thos. Hale of Pembroke, Robert Booth of Pembroke and J. R. Booth of Ottawa. They conducted operations on the Veuve river, running into Lake Nipissing along the mainline of the C.P.R., and also on the Amable and DuFond streams which are tributaries to the Mattawa. The company got out square and waney white pine timber for export. This was in the eighties and the square timber trade was then a prominent factor in the development of the lumber industry of Canada.

Mr. McFadden was later made manager of the logging enterprise of the company and remained with them until 1890. He then branched out on his own behalf and for three successive seasons conducted big logging contracts in the Algoma District as well as taking out some stock on his own behalf. He then rejoined Hale & Booth, and, becoming a partner in the firm, went to Michigan where, in the upper peninsula of that state, he tapped virgin forests of white pine and, within four years, took out a million cubic feet of waney timber as well as a huge quantity of logs. The timber was loaded on vessels at Grand Marais, Mich., and shipped to Quebec for export while a large consignment of logs was turned into lumber at Grand Marais. This venture proved to be a profitable one and was wound up after four years, owing to the death of Mr. Hale which took place when Mr. McFadden was exploring some timber resources in Minnesota with a view to operating in that state.

Returning to Canada, he took out logs on the Vermillion River in the vicinity of Sudbury for some time, and subsequently formed a partnership with the late John Ferguson, M.P., of Renfrew, and the late Wm. Anderson of J. R. Booth. They operated under the style of Ferguson & McFadden, running a well equipped mill at Tomiko, twenty-six miles north of North Bay on the T. & N.O. Railway. This operation continued for five years.

Mr. McFadden also conducted mills at East Templeton, Que., and other places, and some ten or twelve years ago formed a partnership with the late John Malloy under the name of McFadden & Malloy, purchasing the limits and mill of Waldie Bros. at Spragge, Ont. Four years ago the firm bought the mill, stocks and timber concessions of Eddy Bros. & Co., Blind River, which is sixteen miles west of Spragge. This important deal gave the firm a cutting capacity of about 300,000 feet a day. The season's production of Mr. McFadden is 35,000,000 to 40,000,000 feet a year, consisting prin-

cipally of white and red pine. The leading market for the output at Spragge and Blind River is the United States.

This winter Mr. McFadden is operating nine camps and will take out more timber than a year ago. He has always taken a warm interest in the activities of the Canadian Lumbermen's Association and the Georgian Bay Lumbermen's Association, as well as all boom and improvement companies. In the federal election campaign of 1921 he was strongly urged to become the Liberal candidate in East Algoma, but his chief attention has always been devoted to his vast lumbering interests, in the development of which he has been the central figure until to-day his firm is an outstanding organization in the Canadian forest products arena. Mr. McFadden rarely takes a holiday, and finds his chief pleasure and delight in the open air, pioneer pursuit in which he has been engaged for the last forty years.

## Shortage of Spruce Stock Looms Up

A leading Eastern wholesale lumber firm in a recent report say that trade looks much brighter now—not only looks it but is better and there is a feeling that 1923 will be a good year. Continuing, they say "Stocks are very low and the output is going to be smaller than we figured on the early part of the season. The yards and our American cousins are beginning to open their eyes to the fact that ready largely gone into consumption. This also applies to the United Kingdom as well.

"Our English friends are already aware of the fact that if they want Canadian lumber that they will have to pay the price for it. At the present time they are willing to do so; in fact for certain grades etc., they are a little ahead of our American cousins in price. This all goes to show that, with a much reduced output from most Eastern mills, practically no old stocks on hand, (this has been the great drawback for the last two years), the retail yards pretty bare, and, at the same time, talk of a great amount of building all over this part of this continent, prices should advance. The increase should be enough so that the lumberjack and the millman will be enabled to make a decent wage and living, and also allow the latter to pay a fair stumpage. This observation applies whether the logs come off Government lease or private lands.

"We do not want a runaway market, only enough to make a fair profit. If anyone is entitled to a fair margin it is the lumbermen, for they have to take decidedly long chances, much more so than in a great many other businesses."

## Good Friend of Lumbermen Passes

Dr. S. P. Cooke, who for over fifty years followed the pursuit of medicine in Ottawa and was the oldest practising physician in the Capital city, passed away recently in his 75th year. He took to his bed on the day after Christmas and died practically worn out after half a century of medical practice. He gave free medical attention each month to scores of poor people in Ottawa and his death is deeply regretted.

The late Dr. Cooke was well known to many lumbermen in both the upper and lower Ottawa Valleys and on the Gatineau. He was born at North Nation Mills, Que., and was a son of the late Alanson Cooke, ex M.P.P., who expired in 1904 in his 93rd year. Many old-timers will remember that Alanson Cooke operated on the Ottawa river with sawmills at North Nation Mills, which is forty miles below Ottawa, under the firm name of Cooke & McGill.

S. P. W. Cooke, of Toronto, who represents J. Hanbury & Co., Limited, of Vancouver, and the Allen-Stoltze Lumber Co., Limited, of Vancouver, is a son of the late Dr. Cooke, and many friends will extend their sympathy. The deceased physician is survived by his wife, three sons and two daughters. The funeral to Christ Church Cathedral and thence to St. James Cemetery, Hull, was largely attended, showing the esteem in which he was held. The floral tributes were numerous and beautiful.

## Lumbermen Object to the Stamp Tax

W. P. Dutton of Winnipeg, was recently re-elected president of the Western Retail Lumbermen's Association, at its Thirty-second annual convention held in Winnipeg.

Resolutions expressing opposition to the stamp tax on receipts and cheques, urging the provincial Government to take measures for the reduction of the cost of litigation, and also recommending very careful consideration of the Hudson Bay Railway project before definite action one way or the other is taken, were adopted during the morning's session.

## How the Retail Lumber Dealer Can Co-operate

(Continued from page 36)

fact that implement sheds are cheap and necessary and that farm machinery is necessary but not cheap. He points out that every farmer needs a building separate from his other farm structures, designed for the storage of implements, away from poultry roost nuisance and danger from fire. Poultry is interesting on a farm but not among implements and waggons. You can turn a wagon wheel into a hen roost by rolling it in; frequently the hens turn the whole wagon into a roost without turning a wheel. When the hired man hitches up and climbs into the seat in the morning before daylight, he expresses his opinion freely. With a good enclosed implement shed such accidents are not likely to happen.

Mr. Mackenzie points out that \$1,000 worth of farm machinery with the best of care will depreciate about 10% annually. The loss on many farms is more than that because the whole farm equipment is left out under the weather when it should be under cover.

### Some Implements to Keep Covered

Some of the implements which the average farmer possesses are: Grain harvesting machines: binders, reapers, shockers, threshers.

Haying machines:—mowers, rakes, tedders, combination side rake and tedder, loaders, all types, sweep rakes, stackers, baling presses, bunchers.

Beet tools:—seeders, cultivators.

Corn machines:—binders, planters, drills, cultivators, ensilage cutters, shellers.

Planting and seeding machines:—grain drills, broadcast seeders, fertilizer drills.

Power machines:—kerosene engines, kerosene tractors, motor trucks.

Tillage implements consists of:—tractor plows, riding plows, walking plows, disc plows, disc harrows, tractor harrows, orchard harrows, spring tooth harrows, peg-tooth harrows, cultivators, cultipackers, land rollers.

Other farm equipment includes:—cream separators, farm wagons, farm trucks, manure spreaders, straw spreader attachment, feed grinders, tractor hitches binder twine, sleighs.

## Good and Bad Lumber-piling Methods

The extreme of good and bad practice in lumber piling are shown in the accompanying illustration.

The photograph on the left shows an alley of hardwoods piled for profit. All piles have the same slope and pitch, all are placed on concrete foundations 12 to 18 inches above the ground, and the roofs of all piles are secured firmly with wire. The stickers, which are in no case wider than four inches, project one inch beyond the fronts of the piles throughout the yard. The ground about the piles is covered with closely-cropped grass, and there are no weeds nor scraps

An illustration of "how and how not to"

of decaying lumber to incubate molds or stains which may attack the piled lumber. Ample air circulation is assured by maintaining an interval of four feet between piles, and by the generous space between pile and ground.

The two piles shown in the photograph on the right are not uniform in slope, pitch, or length, nor were there two piles in the entire yard which were alike in these particulars. The foundations of the nearer pile are of rotten timbers, and the pile itself was started on a layer of lumber culled from a previous pile on account of decay. The roof is not secured against strong winds. The stick-

ers are not placed flush with the ends, and the lumber near the bottom of the pile is badly bent as a result of their not being placed one directly over the other. The piles being only 18 inches apart, without flues, and the space below the pile choked with refuse wood, there is little chance for circulation. The projecting boards not only warp and twist badly, but in rainy weather they carry the dirty dirt from the tramway back into the pile to stain the lumber and start molds. The lumber shown in this pile is resawed stock, but surely worth drying properly if good enough to dry at all.

Lumber dried under the conditions of the piles shown on the left seasons rapidly, uniformly, and with a minimum of deterioration. The extra cost of careful piling and care of the yard is more than compensated for by the improved quality of the lumber, not to mention the saving in assurance.

Lumber dried under the conditions shown at the right often degrades to the extent of 25 per cent.

## Ten Things Not to do For Efficiency

From the point of view of efficiency the following things are very unlucky:

Arriving ten minutes late.

Quitting work ten minutes too soon.

Starting a job before planning it.

Spelling a customer's name wrong.

Putting the blame on some one else.

Making the same mistake twice.

Getting angry three times in the same day.

Taking eight hours' pay for six hours' work.

Thinking of a horse race while operating a lathe.

Running upstairs after a heavy meal.

—Efficiency Magazine.

## The Sweet Salute to the Trees

Many a tree is found in the wood  
And every tree for its use is good;  
Some for the strength of the gnarled root,  
Some for the sweetness of flower or fruit;  
Some for shelter against the storm,  
And some to keep the hearthstone warm;  
Some for the roof and some for the beam,  
And some for a boat to breast the stream.  
In the wealth of the wood since the world began  
The trees have offered their gifts to man.

Henry Van Dyke

## Yes? It is Very Funny

Isn't it funny?

THAT A MAN WHO THINKS

HE IS A BUSINESS MAN

Will get up in the morning

From an advertised mattress,

And put on advertised underwear,

Advertised hose, shirt, collar, tie and shoes,

Seat himself at the table and

Eat advertised breakfast food,

Drink advertised coffee or substitute,

Put on an advertised hat,

Light an advertised cigar,

Go to his place of business and

# Is Pulp And Paper Industry Growing Too Fast?

*Danger Signs Seen in Some Directions that the Saturation Point is in Sight—Warning against Unnecessary and Excessive Production.*

H. F. E. Kent, Toronto,  
The New President

H. F. E. Kent, of Toronto, president of the Kinleith Paper Mills, Limited, is the new president of the Canadian Pulp and Paper Association, with George Carruthers, head of the Interlake Tissue Mills, Limited, whose plant is at Merriton, Ont., vice-president. These appointments were made at the annual meeting held in the Ritz-Carlton hotel, Montreal, on January 26th.

In the absence of G. M. McKee, Mr. Kent presided over the meeting, which discussed questions in a fuller manner than is customary.

In place of the usual presidential address, Edward Beck, the secretary, gave a survey of conditions in the industry. He sketched the rise of that industry, pointed out that in 1913

64 mills were in operation while in 1921 there were 100 mills. Newsprint production in 1913 amounted to 350,000 tons; in 1921 the production was 805,114 tons or 130 per cent. greater, while in 1922 it exceeded 1,690,000, or an increase of 300 per cent. in the ten year period. Total woodpulp of all kinds produced in 1913 amounted to 854,624 tons; in 1921 it amounted to 1,544,027 tons, an increase of 80 per cent. What about the year 1922 just closed?

In considering the immediate condition of the industry we must remember the year 1921 was one of depression and difficulty; it was also a year of reorganization and reconstruction. Towards the end of that year, however, the situation began to look a little clearer and we entered upon 1922 with a more optimistic outlook, prepared for twelve months of steady, if slow, progress. The year which has just closed fulfilled our expectations and although we had no sudden return to prosperity, we have experienced a steady growth and development and we feel confident that our industry is now on a solid and sound basis so that we can look forward with cheerful optimism."

## Mr. Beck Utters Word of Caution

Mr. Beck pointed to a great all-round increase in production during the past year, and proceeded:—

"Satisfaction over past achievements should not lead us to underrate the possibilities of the future. There is no reason why our industry should not continue to expand and to keep pace with the growth of the country and with the natural increase in the universal demand for its products. Possibly, however, we may be going ahead a little too rapidly. Overconfidence as to an unabated continuance of the present demand for our products may lead us into undue or too rapid development. There are already danger signs in one or two directions that the saturation point is in sight. We should guard against unnecessary and excessive production, which is apt to prove as unprofitable and undesirable for the consumer as it is for the producer.

"When it is considered that the newsprint mills of Canada, now in operation, or under construction, or for whose construction provisions have been made, are committed to a program which will give them a combined output capacity of 4,315 tons a day, or practically 1,300,000 tons a year by the end of next year; that production in the United States is also due for an increase, attributable to new machines now in process of installation; that the total demand for this class of paper on this continent, practically our only assured market, at its maximum and never exceeded 2,500,000 tons a year that United States production has never failed to equal at least 58 per cent. of this demand, and that the tonnage due from Canada by the end of 1924 will equal 57 per cent. of the greatest volume of consumption in any one year, the figures may naturally invite a question as to whether expansion has not reached or is it approaching the danger line?

"Similar conditions may be said to apply in lesser degree to the production of groundwood sulphite and the finer grades of paper. If expansion is to go on at its present rate it is inevitable that new markets must be explored. Where are they to be found? How can we best meet the competition that we shall be faced with when we find them?" A vote of thanks was accorded to Mr. Beck.

The reports of the various sections were then submitted, R. P. Kernan, the chairman of the Woodlands Section pointing out that the use of gasoline driven tractors in logging operations has gone far beyond the experimental stage and their worth for hauling under certain conditions has been absolutely proven. In several places in the Adirondacks hardwood and spruce logs are being hauled for distances of from seven to fifteen miles at a very low cost. Some members are using tractors on a small scale and, after studying the matter more closely, timber situated in the back country five to ten miles from the rivers should be cut and hauled as cheaply as the timber nearer at hand.

## Two Proposed Appointments Deferred

The proposed appointment of a Director of Technical Research for the Association and also of a permanent secretary for the Woodlands Section, the first department to cost \$30,000 and the latter \$10,000, resulted in a long discussion. While there was no opposition to the principle of research work and of a permanent secretary, some members expressed the opinion that the time was inopportune for such appointments. It was decided that both should be held in abeyance for a year and that the Committee on Technical Research should continue its work.

A proposal to amend the by-law dealing with dues was carried. Angus McLean wrote, suggesting that the Association support an amendment to the Workmen's Compensation Acts, which Acts, he regarded as imposing excessive and unwarranted charges. This matter was left to the incoming executive who will also consider matters relating to the Acts.

Hon. C. Stewart, Minister of the Interior, wrote, asking that support of the Association in connection with the Imperial Forestry Conference to be held in Ottawa during the summer. He pointed out that representatives from Great Britain, Australia, New Zealand, South Africa and the Crown Colonies would be present. So far as the supply of timber was concerned, Canada was the chief source within the Empire of certain classes of wood for Great Britain and the conference might provide the opportunity of correcting some misapprehensions with regard to Canadian wood. The Dominion Government was bearing the greater part of the cost of the conference. The appointment of representatives was left in the hands of the Council.

## B. C. Loggers Look for Busy Year

At the annual meeting of the British Columbia Loggers' Association held recently, Mr. Goodwin G. Johnson, manager of the Capilano Timber Company, Limited, was unanimously re-elected president and Mr. Norman A. English, manager of the Nimpkish Timber Company, was elected vice-president. The following were elected directors: Mr. A. J. Anderson, International Timber Company; Mr. Geo. Challenger, Challenger Timber Company, Limited; Mr. F. S. Buck, Deep Cove Logging Company, Limited; Mr. S. G. Smith, Bloedel, Stewart & Welsh Corp. Limited; Mr. P. A. Wilson, Wilson-Brady Limited; Mr. F. R. Alley, Tahkina Timber Company, Limited; Mr. Geo. Moore, Merrill Ring Lumber Company; Mr. L. H. Weber, Brooks-Scanlon-O'Brien Limited; Mr. T. A. Lamb, Lamb Lumber Company; Mr. A. E. Munn, Munn & Kerr Timber Co.; secretary, Mr. Geo. Muddiman.

Mr. Johnson stated that indications all point to a busy year in the lumber industry of British Columbia. He referred to advices he had from various parts of the country, which indicated a large demand for lumber, and stated that in order to cope with the business offering, several mills on Puget Sound and Grays Harbor were running two and three shifts.

# Capt. Dollar Recalls Days of Early Bush Life

## Tells Western Planing Mill Men what Conditions were Like in Canada Sixty-three Years Ago in Gatineau and Muskoka Districts —Evolution of Camps

Much is said in the press nowadays regarding conditions in the lumber camps as they exist at present when contrasted with the chaotic state of things some thirty or forty years ago. The progress in sanitary, lodging, lavatory and eating arrangements were ably outlined in a recent issue of the "Canada Lumberman" by Alex. R. White, of North Bay, Provincial Sanitary Inspector. His contribution aroused timely interest even among lumbermen who are thoroughly familiar with the development of the times and the trend of events.

It is interesting, at this season of the year, to relate how old-timers view the transition in bush labor and accommodation. One of the spectacular figures in the lumber arena is Capt. Robert Dollar, who is known far and wide. He recently delivered an address at the first annual banquet before the Western Planing Mill and Woodworking Association at San Francisco, Cal. Capt. Dollar, in his early days, was a well-known lumberjack in the Upper Ottawa and the Quebec Districts and recalls his early experiences with keen interest. Speaking of them he said that his father was the manager of a lumber establishment. He and his wife lived in the upstairs of the lumber office and there the subject of this reference was born, so that, as he phrases it, he started earlier in the lumber business than do most men of that calling.

Continuing, he said "That was in Scotland, and at twelve years of age my father moved to Canada and a few days after I got a situation working in a stove mill. My education, of course, at first was very limited, because I left school when I was eleven years old. However, afterwards I got a university education. Probably a good many of you gentlemen here will think, well, that is most remarkable, a fellow coming up and working in the lumber woods and getting a university education. I got a university education and got my diploma in the school of hard knocks. A professor in one of our universities said, in talking to a young man the other day, this education that you are getting will not necessitate your working. I would like to know what is the good of a fellow if he don't work; I have got no use for him. I have had to work all my lifetime and often say to the men in my employ, I want you fellows to all work as hard as I work, but don't try to do more than I am doing.

"The condition of the lumber business when I went into it was somewhat different from what it is to-day. I went to a lumber camp first sixty-three years ago in Canada on the Gatineau River. It took us eight days to go, in bark canoes, to our camp. The late Senator Edwards, a chum of mine at that time, took me in his automobile in four hours to the place which it required eight days to reach in early days. You can imagine the revolutionary change that has taken place. Not a tree or stump of the original forest in sight for miles; all the land was devoted to farming.

### Wonder That Any Survived

"In regard to the sanitary conditions that we hear so much about, it is a wonder that any of us survived, and yet I never saw a man die in a lumber camp in my life. We did not have a wash basin, but used a trough; then we dried ourselves on a roller towel until it got so wet that it was no good and the cook would kick if we wanted another one. If two men or women use the same towel now, we are going to have the typhoid fever or something else. As to the food, we hadn't much of a selection—pork and beans and flour and tea, and that was the whole thing, and beans to make pea soup. In those days out motive power was oxen. I mention these things to show what a change has taken place. At that time where I was lumbering it was a wilderness, unsettled for a hundred miles when I went up there, but where our camp was, not a stump is in sight; it is a fine agricultural country now, unrecognizable. Then after I had worked on the Gatineau River I found the country opening up about the Muskoka district, where we could get timber cheap. I started with another young man and we were going to make our fortunes, but we didn't sell our logs. Well, perhaps we might have done it, but Black Friday you have all heard of, intervened and we all went busted. Then the next thing I did after I got busted was to get married. I then hired with a big lumber firm and was operating eight or ten camps for them and I had a thundering big salary—\$100 a month. You can imagine a fellow these days getting

married, in debt and starting to pay them off on \$100 a month. But my wife and I were economical and we paid off all of our debts and then started in business again. A young man 26 or 27 years of age knows it all at that time, but I have learned something since, so as the result of that incident I haven't failed since that time.

"We started taking square timber to England. When timber got scarce in Canada I moved to Michigan. About that time I heard the advice of Horace Greeley, 'Go West, young man.' I have been going West until last year I found myself in the East after going clean around the world. Then the timber got scarce in Michigan and I have resided in California 34 years, where there has been lots of timber. I only mention that to show you I am a lumberman. They dubbed me a 'captain.' I protested against it. I am 'Captain' Dollar in a great many people's eyes. Some of my later critics say the only captaincy I ever held was in the Salvation Army.

"The first donkey engine that was ever used in the woods was used up in Mendocino County, California. You can imagine the tremendous change that has taken place. The engine was a little bit of a thing compared to what they have now, and the whole logging now of this great Pacific Coast is done by steam. The rapid change is very, very difficult to understand.

"We got into lumbering and we found the fellows who owned the ships were getting about all the profit and I thought I would go into shipping too. The first ship was about 240 tons register and carried about 200,000 feet of lumber; you lumbermen will understand that all right. The trip I made around the world in one of our steamers, the largest one we have, which, if it were loaded to capacity, would carry ten million feet—that is some change. So that now we have a good many steamers and it is beginning to look to me as if the tail was beginning to wag the dog.

"I must mention, in Michigan, I had a very large mill at Dollarville, Mich. We have a mill in Oregon and very likely to have two, so your secretary tells me, and we have another mill in British Columbia, all furnishing lumber to keep our ships going. At first we got the ships to keep our mills going, and now we have got the ships we have to run the mills to keep the ships going.

"Now, another thing I think that would interest you: that mill we built in Michigan was a double sided mill with double circulars on each side. You may ask 'Why didn't you put in band mills?' There wasn't such a thing as a band mill; circulars are now just about out of date.

"Then I found when we got ships that we had to go to foreign countries, and I made a trip to China a number of years ago and found that there was a prospect there for sending our lumber over to China. At that time the lumber trade from this coast did not exist, but we started in, in a small way and sold lumber, then got yards equipped and it has been growing and growing until the first six months of this year we shipped to China 17,000,000 feet of lumber.

"The first time I went to China I was invited to go to a club. There was practically no Americans there at that time. An English agent invited me to go to the club. When I got there he said, 'Come into the bar and have a drink.' I said, 'Thank you; I don't drink.' He said, 'Have a smoke then.' I said, 'I don't smoke either,' and he stood and looked at me and said, 'Do you intend to come over here to do business in China and you don't either drink or smoke; if you do, the Lord help you.' Well, the Lord did help me. He is out of business now and I am there yet.

"In China we have gone on the principal of not leasing or renting, but of buying land and putting up our own buildings. That is a big advantage, as the Chinese will say, 'These people have come to stay.' A great many 'fly-by-nights' have gone to China; they hop in and hop out. When they see we are buying land and putting in buildings and going in permanently, they say, 'That fellow is going to stay.' The Chinese are all from Missouri; you have got to show them."

### An Old Timer Grows Reminiscent

Recently Ralph Connor's stirring novel, "The Man From Glen-gary," was presented in the movies in Toronto and some realistic

lumbering and logging scenes on the Ottawa and Gatineau rivers were thrown upon the screen. They were exciting and showed the wild, rollicking, devil-may-care life of the woodsman forty years ago, when some high old times were characteristic of the calling. Then there was often hard drinking and free fights, but these are already things of the past and the better class of lumberjack to-day are steady-going, industrious chaps who have families and save their money for home and its comforts. Of course, there are exceptions but these only go to prove the rule that a great change has taken place in the class and nature of the help engaged in the woods.

In the daily press recently an old-timer gave the following interesting reminiscences, which along with those of Capt. Dollar, are particularly apropos:

"Taint like that now," exclaimed a grizzled bushman from Northern Ontario as he sat in a Toronto picture show the other day and viewed the above portrayal. He was gazing at the old-time camboose in which the shantymen used to live. "But I mind them cambooses when I was a young feller forty-year ago," said he. "They was just log buildings with a big hole in the centre of the roof to let the smoke out; and a big, open fire built on a pile of sand, held in place by logs. There was two or three rows of bunks around the sides. All we had to eat in them days was Chicago pork in barrels, and beans, and bread and tea, and molasses. We never seen sugar, nor coffee, nor butter nor jam, and we got pie once a week—on Sundays."

"That's how it was when I first went to work in the bush in the fall of 1882, back north of Penetang," quoth the veteran. "Weren't no kicking about the grub like there is to-day. Boys, but them beans—baked all night in the hot sand—tasted good, and so was the bread. We got lots to eat, but gosh! it was a hard life them days. There was no table at all. A fellow just sat with his plate on his knees. There was no lights, neither, in the camp—only the light from the fire. Breakfast was at 4 o'clock and after that we used to walk three miles through the bush and wait there beside a bonfire until it was light enough to start work. They used to feed the horses at 3 in the morning and never bring them in till

dark. Lots of horses were killed from over-work. Along about 11 we got lunch in the woods—pork and bread and tea. We got supper at a quarter to six. And, say, if a feller came into camp before dark he got h— from the foreman. There was always three men waiting to take your place if you quit."

The primitive caboose camp passed out soon after 1882, but according to the old bushman the succeeding camps were little better. The lowest bunk was on a level with the floor, the topmost of three tiers jam against the low roof. Balsam boughs served for a mattress and three half-cotton blankets as bedding for the two occupants of each crude bed. Filth and sickness were rife. And withal, the best men—skilled choppers, whose axes had to do all the work in those days when they didn't use saws in felling trees, received but \$11 or \$12 a month. The timber waste was awful. None but the finest white pine merited consideration, and when a tract had been lumbered, the ground was strewn with discarded long tops and butts which, to-day, would be esteemed fine logs for the mill. Forty years ago anything less than 13 inches were cast aside as valueless. Good 16-foot logs were rejected for trifling faults or bits of rot. But No. 1 white pine lumber sold for as low as \$10 a thousand then, and millions of feet of prime stuff was used to build sheds and back-yard fences in Toronto.

And what of Ontario lumber camps to-day? They are clean white-washed places, according to the old-timer who hires out as "buck bearer" or ice road foreman when he runs short of funds. The law looks well after the interests of the men. The filthy old bunks have vanished. In place each man has his individual spring bed with mattress and blankets. The floor is scrubbed twice weekly. The monthly tax of \$1 is taken from each man for doctor's attendance, and if the lumberjack is also obliged to pay \$1 a month for washing, his clothes are properly laundered for him by a woman. Nowadays he breakfasts at 6.30 instead of 4, and when noon hour comes in the bush, a sleigh arrives with a hot dinner for him, as it does much to stimulate construction among the builders of camps elsewhere. "James Ludgate, the manager of the company, deserves all the credit we can give him," he adds.

## Model Camp of Schroeder Mills & Timber Co. at Pakesley, Ont.

Storehouse, Office and Foremen's quarters

Horse hospital and stables

Blacksmith Shop

One of the progressive lumbering concerns in Ontario is the Schroeder Mills & Timber Co., whose headquarters are at Pakesley, Ont. James Ludgate is the general-manager of the company which has always been noted for the superior character of its camps and the up-to-date features which these possess.

In this issue of the "Canada Lumberman" are presented several views of the model camps of this progressive organization. The pictures convey more information than could possibly be done through columns of description.

The following letter from Dr. John W. S. McCullough, chief Officer of Health for Ontario, to the "Canada Lumberman," clearly sets forth much data in a comprehensive way:—

Camp No. 7, the new camp constructed during the current season on which the Schroeder Mills & Timber Co. desire our opinion, is without question the best camp ever

constructed to my knowledge as a cutting camp. The bunk-house is constructed to house 125 men and is all under one roof, but is really three separate sleep camps, each with its own separate wash-room and room for a shower bath. The building, and, indeed all other buildings, are exactly as the regulations require. Fresh air inlets, ventilators, dormer windows, everything is exactly as we intend, with the addition that there is easily twice the window space expected. There is a laundry building presided over by a wash-woman, an isolated hospital, and even a horse hospital. The camp consists of 17 buildings in all, arranged in a square with the yard in the centre. The camp is provided with single iron beds."

The Chief Camp Inspector says: that he believes such a camp as this is worthy of being illustrated in the "Canada Lumberman"

Sleep camp for one hundred and twenty five men. Building divided into three parts, each with separate wash rooms

Cookery and dining room, roof-windows same as sleeping camp

Mill of New River Lumber Company,  
Norma, Tenn.

Mr. Doster Ready to start

Those Who Waited Mr. Doster's Arrival

### Saw Salesman Made Novel Aerial Trip

Lew Doster, the well known Atkins Saw representative, has added another feather to his cap by taking up flying. His work takes him into every state in the Union, and as there is only one law, he figures that through the use of an aeroplane he can be here, there, and everywhere on short notice.

In Knoxville, he recently found himself pressed for time, while contemplating a trip to Norma, Tennessee, by train. It takes a day and a half to go by train over the mountains on the tortuous trails. While meditating on a plan, Ben Franklin's proverb, "If time be of all things most precious, wasting time must be the greatest prodigality," kept running through his mind like the words of a popular song.

"Oh, for a flying machine," mused Doster, quoting from the immortal Darius Green:

He hied himself to a hanger, and made arrangements for a trip by plane to the plant of the New River Lumber Company, which is situated at Norma about twenty-five miles east on the Tennessee railroad, which connects with the C. N. O. & T. P. at Oneida.

To say that he had a thrilling and interesting trip is putting it mildly. The pilot he engaged told Doster that he would take him up and "wait around awhile." Mr. Doster took a slant skywards and wanted to know right away where the pilot was going to park the boat in the atmosphere. When told that this was necessary to get one's bearings, he calmed down. In fact he decided to take along his camera, so as to snap some pictures on the fly. He gave up the idea of taking pictures, however, after ascending to an altitude of five thousand feet. The machine ran into so many air pockets that he decided the best thing to do was to sit still, hold on and trust to luck. The machine took a nose dive while crossing the Appalachian mountain range and dropped four thousand feet and when this occurred several times in succession, Doster thought that his time was near. Fortunately, he arrived in Norma in forty-five minutes after leaving Knoxville and was met at the landing field by the executives of the New River Lumber Company, including W. O. Harter, W. H. Hopkins, John Shea and Mrs. W. H. Ford and Mrs. Ralph Martin.

When asked if his trip was a success, Mr. Doster answered, "Say, now listen, did you ever hear of me going on a selling trip and fall down for my company."

### Value of the Forest as Recruiting Agent

With all the present talk on immigration focused upon the single point of securing new settlers for agricultural land many newspapers are apt to forget the unadvertised service of the Canadian forest as a recruiting sergeant for new Canadians. Agricultural lands are by no means the only generator of increased population or national wealth. This country may very easily commit itself to large outlays in new farmers while treating with unconcern the corollary policies of forest conservation absolutely vital to the business success of the new farmer.

Eighty per cent of the total area of the Dominion of Canada is of non-agricultural type. Not more than five percent of the whole area of British Columbia is of agricultural worth. Of Saskatchewan about one-third is fit for farming. Ontario's area is from sixty to seventy per cent non-agricultural, and so the story runs through most of the other provinces. The greater part of this Dominion is marked out by unchangeable laws as a splendid natural factory of many times over by the portion of our estate on which the forest is the only profitable crop.

timber trees. The acreage adaptable to agriculture is outmatched. The development of Canada, therefore, is scarcely compassed by any one public policy restricted to the promotion of farm settlements. Indeed, there never can be any such thing as an immigration and colonization policy without a four-square forestry policy. And the start of any adequate forestry policy is a satisfying answer as to why four thousand forest fires were burning in Canada this

year and why the greater part of the country's natural forest inheritance is today a wilderness of blackened wreckage.

Were it possible to prepare a review of the enormous service done by the farmless empire of this Dominion that the map makers designate as "Forest Area" what surprises would evolve therefrom? How wonderingly we would trace the influence of the lumber industry in developing new population, new towns, new railways? There is scarcely a community outside of the prairies which has not part of its foundations in somebody's sawmill. Much of the story of the lumber industry, however and its influence on population would be retrospective—pathetically so. There is more to be gained by climbing to a newer altitude where the huge bulk of pulp and paper plants gleam white against the spruce woods.

### Product of Canada's Industrial History

The pulp and paper industry is the product of Canada's industrial history. Twenty-five years ago it was straggling for to the rear of home industries activities. The newsprint mills and investors of the United States foresaw the eventual embarrassment from declining wood supplies and the trek began to the happy land of Canada where abundant forests and first rate water powers promised a cut in production costs. And thus the sleepy village became the young city of Grand Mere, Quebec; the Canadian "Soo" drew to itself thousands of new citizens; Three Rivers was suddenly filled with processions of home seekers; Iroquois Falls and LaTuque broke the wilderness with a chain of chimneys and orderly lines of workmen's homes. And year after year these pulp and paper communities add to their numbers with no thought of suspending growth for a dozen years to come.

This is pioneering on a wholesale plan. This is colonization. This is settlement, although we commonly leave these terms to the immigration agent. The pulp and paper companies and other forest industries have carried out the national development idea. They have given Canada scores of prosperous towns; they have contributed enormously to railroad traffic, they have provided steady jobs to thirty thousand good class workmen at generous wages in their mills and another twenty-five thousand in bush labor.

Is it, after all, the pulp and paper mills that account for all this economic transformation, this placing of new population where only the trapper walked before?

Is not the paper mill only the sub-agent of the forest? The whole of such development is in consequence of forest and water powers. The mills came because forests were available and mills will depart when the forest ceases. Population came because raw material called it. Grand Mere and Kenogami and Iroquois Falls would never have existed but for the magnet of the forest.

### Pay Tribute to Memory of Mr. Gordon

At a special meeting of the Montreal Lumber Association, on January 22nd, a resolution of deep regret at the passing of Mr. P. D. Gordon and sympathy with the family was passed. Mr. Gordon's long connection with the Association and the prominent part he took in the activities, were recalled, the members making sympathetic references to the loss sustained by the Association and by the lumber trade.

The funeral on Friday January 19th was with full Masonic ritual, the service being held at the Masonic Temple in the Lodge Room of Royal Victoria Lodge. No. 57, A.F. and A.M., of which Mr. Gordon was Past Master. Prior to his death, Mr. Gordon expressed a desire that the funeral should be conducted according to the rites of the Order. The total Masonic attendance was about 500, including many representatives from out of town. Those present also included many personal friends in the lumber trade and also representatives of lumber firms. Prior to the Masonic service, a private service was held at the family residence.

# Forest Fire Fiend Rampant As Never Before

*If Canadian Timber is to be Preserved Greater Measures of Protection Must be Instituted.—The necessity of Prompt Action on the Part of Every Citizen.*

By C. E. Lund\*  
Chief County Warden of Westmorland, N.B.

We have to-day in the Dominion of Canada probably in the vicinity of one billion acres of forest land of all classes, but how are we conserving it.

"Within the last seventy two years, the life time of one generation, two-thirds to three-quarters of our timber wealth has been destroyed by fire." The spruce bud worm, for a number of years—has made serious inroads, and our extravagant methods of lumbering, along with the pulpwood menace we are now up against are seriously threatening our industrial prosperity.

Nearly every industry is so dependent on the forest that its depletion is the undermining of them all. To my mind it is a grave question if we will be able to arise in our puny might and cope with the present conditions in such a manner as to conserve for the near coming generations a sufficient annual growth of timber to meet their actual industrial necessities.

Our primeval or virgin forests are mostly gone. The towering pine and giant spruce and hemlock, the leaning topped hackmatack and large spreading cedars of our boyhood days are not now to be seen, unless perhaps in a few remote localities. Their places are taken by a small inferior growth of some less valuable variety.

Longfellow, in beginning his pathetic story of Evangeline wrote: This is the forest primeval. The murmuring pines and the hemlocks bearded with moss, and with garments green, indistinct in the twilight, stand like Druids of old, with voices sad and prophetic. While the words "sad" and "prophetic" were perhaps given no such meaning by the poet as I attribute to them; yet I sometimes think not only the "pines" and the "hemlocks," but the spruce and the fir and the cedar, if given the power of speech, would raise their voices in solemn protest against their wanton and rapid destruction by fire and axe, in a wail, sad and disconsolate, lamenting their lost condition and beseeching us to spare the remnant before it is too late.

## Suicidal to cut all Medium Sizes

As the amount of annual growth of a forest depends on the size of the trees, it is a suicidal practice to cut out all the medium sized trees in any operation and leave only the small growth. Besides the destruction of the unprotected young timber by the wind, it takes too long for such a depleted stand to recover. The annual growth of a tree is a thin sheet of fiber encircling the trunk beneath the bark, and of course the larger the tree the greater amount of fiber it produces. To cut timber below a reasonable standard size is proverbially to kill the goose that lays the golden egg.

I would like to utter such a note of warning against carelessness with fire and wasteful cutting as will tend to bring about improved conditions. Conservation, conservation, should be our slogan.

The County of Westmorland has the honor of being the first in the Maritime Provinces if not in the Dominion, to take steps for the more adequate protection of our timberlands. The owners secured legislation to tax themselves to raise a "Protection Fund" for that purpose. For nearly nineteen years the writer has had the responsibility of the over-sight of this laudable undertaking. How well the work has been done is for others to tell, but it easily goes without saying that conditions have so changed for the better that no one for a moment would think of going back to the old haphazard, do-as-you-please method. The expense has been kept at a minimum, and fully warranted by results. With an imperfect organization our aim has been to give reasonably adequate protection at the lowest possible cost. The small expense incurred this year is met by a balance remaining on hand from an assessment made several years ago.

We are working entirely independent and apart from Government control, though appreciating any helpful suggestions from, and

acting in full harmony with, the Provincial Forester and other officials of the Crown Land Department. Unfortunately, last year we had, in addition to several small fires, three quite extensive and expensive ones. Each was set in violation of the law and should not have occurred,—being caused either by culpable carelessness or criminal design. This year, so far we have had only a few, mostly small grass fires and the damage has been almost nil. Our local Government is doing a commendable work in trying to cope with the fire fiend, but Governments and other organizations cannot do everything, and we will only meet with the maximum of success in forest conservation when we learn that the trees are our friends no matter who owns the land on which they grow. They regulate the water flow, conserve the moisture in the soil perpetuating the existence of running brooks and springs making the country a possible abode for man and beast.

## How Forest Protection Benefits All

It is a great mistake to suppose that forest protection only benefits the owner of the growing timber. The person who carries on a lumbering operation in the usual way is a public benefactor, giving employment to agriculturists, artisans, tradesmen and in fact nearly all classes, and the various amounts paid out, from the making of the first sled building camp, swamping roads, cutting, yarding, browing, driving, sawing, shipping and the freight charge and insurance on the last load of the finished product, consume so large a portion of the selling price, that often a very small margin remains in the hands of the operator who, in the meantime, has paid taxes on the property for school and municipal institutions besides carrying the risk and worry of the transaction. When we are educated to appreciate this, our interest will deepen and broaden and the impending menace of irreparable loss will be stayed.

## Impress Facts on Coming Generation

In all reforms, when the people are educated to a wholesome appreciation of the law, rather than a dread of its penalties, the battle is largely won. The great question of forest valuation and preservation should be brought prominently before the minds of the rising generation during their school days. While I do not believe in a multiplicity of text books, yet I am fully convinced that a small treatise embodying the location, extent, and estimated value of our forests,—their usefulness, the necessity of their conservation, a summary of the law relating to their protection, and other such information, placed in the hands of our boys and girls, who so very soon will be men and women, would be a great step in advance in our educational system."

Perhaps it may have been expected that I would have something to say in regard to the best method of fighting forests fires, modern equipment, etc. While I am in full sympathy with aeroplane and lookout tower observation, chemical apparatus, force pumps and other advanced methods, yet I regard prevention as so much better than cure, I will only emphasize the necessity of prompt action on the part of each and every person who first sees a threatening fire. When you see a fire try and put it out. If you cannot do so, summon help and do your utmost to save the forest.

During the last two years, 807 forest fires were reported in New Brunswick, burning over an area of about 179,270 acres, with an estimated property loss of 1,157,101 dollars. This estimate does not include the loss suffered in the prospective growth of the timber which in many cases is much more than its present value. The timber loss, however, is not all we suffer from the burning of the forest. One fire is usually soon followed by another and the soil is so burnt away and its fertility destroyed as to make it useless for agriculture. Besides this the game is either driven out or destroyed. This Province would yet have been a hunters' paradise if the hand of the fire fiend had been stayed. How often in passing over a newly burnt area we see the destroyed nests of game birds and the charred bones of young animals. Surely heavy fines and jail sentences, if not flogging, should be given those who are partners in wantonly perpetuating such conditions.

\*From address recently delivered at fire prevention meeting at Petitcodiac, N.B.

## Machinery Wanted

### Wanted

Alligator—steel or wood, in good condition. Give full description, for cash. Box 99, Canada Lumberman, Toronto. 3-6

### Wanted

1 Filer for Double cut 8" Band.  
1 Band Saw Filer.  
Season commences about April 15th. Reply to Haliburton Lumber Co., Lindsay, Ont. 3-4

## Machinery For Sale

### For Quick Disposal

One slide valve engine, 100 H.P. in good repair. Will sell cheap for quick sale. Box 125, Canada Lumberman, Toronto. 4-7

### For Sale

McGregor Gourlay Q.Y., 15 x 6 Planer and Matcher complete. Now running. The Peterborough Lumber Co. Ltd., Peterborough, Ont. 4-7

### Wickes Gang

GANG: No. 12 Wickes Gang, 40" sash, 15" stroke, steam boiler rolls, front and back in two sections, feed and oscillation combined, 1908 model, and has been in use for five years. We furnish with this gang 11 rolls for cants and stock, one filing machine, and 4 sets of saws.

THE PEMBROKE LUMBER CO.,  
1 T.f. Pembroke, Ont.

### For Sale

Linn Lumber and Logging Tractor. Apply Box No. 60, Canada Lumberman, Toronto. 24 T.f.

### For Sale

One heavy duty lumber carriage 40" open-with or without steam feed. A snap if taken at once. Box 126, Canada Lumberman, Toronto. 4-7

### For Sale

Alligator, Rebuilt by West, Peachey & Sons in 1921. Side wheeler, in first-class condition. Apply Schroeder Mills & Timber Co., Pakesley, Ontario. 2-5

### For Sale

Having installed a large Scaper, we are offering our 30" Whitney Scraper complete with knife grinder and two blocks, in first class condition. Apply Hay & Co. Ltd., Woodstock, Ont. 3-4

### For Sale

H.R.T. Boilers.—Two 72" diam. by 18' 0" long. 119—3" tubes, good for 125 lbs. pressure. In first class condition. Gates Engineering Co. Ltd., 314 Notre Dame St. West, Montreal. 3-4

### For Sale

Cross Compound Inclined Condensing Engine 24" x 48" x 60" stroke, suitable for 150 lbs. pressure, with shafting and radial paddle wheels. All in first class condition.

The Upper Ottawa Improvement Co.,  
194 Middle Street,  
Ottawa, Ont. 24-4.

## Sawmill Machinery For Sale

I am dismantling one of the largest mills in Nova Scotia, and offer the machinery at junk values. Complete list furnished on request.

Here are a few items picked at random, to give you an idea of the money you can save:

42" Stock Gang—Stearns Mfg Co.,  
Eric, Pa. ....\$1000.00

24" Stroke Double Cylinder A frame  
Sawmill engine Geo. Waring Mfr. \$1000.00

1 Left hand Band Saw Carriage 25'  
Overall with set works, dogs, wire rope, feed gear driven by a Pawling & Harnishfecher twin engine feed,  
10 x 12 cylinder—carriage equipped for setters to ride .....\$1500.00

1 Tandem Band Sawmill composed of a right and left hand Band Saw with wheel 72" x 8" .....\$ 400.00

Haulup, Steam Kickers, Live Rollers, Conveyors, Shafting, Hangers, Boxes, etc., etc.

RALPH P. BELL,  
Timberlands & Pulpwood,  
4-7 P.O. Box 1081, Halifax, Nova Scotia.

### For Sale

One used S.A. Woods Planer and Matcher, 15" x 9", No. 33 in very good working order, at a very attractive price. Also one Automatic Circular Saw Grinder. O. Chalifour, Inc., Quebec, P.Q. 4-7

### For Sale

Heavy portable Sawmill, Locomotive Boiler on wheels, Centre crank, high speed engine and camp outfit for forty men. First class condition. Will take payment in lumber next spring. Hall Bros. Limited 300 Crown Office Bldg., Toronto. 23-T.f.

### For Sale

Portable saw mill.  
3 block carriages.  
Double edger, boiler and engine.  
A complete equipment. Will sell reasonable and take lumber in exchange.  
Apply: Barrett Bros., 260 Catherine St., Ottawa. 2-5

## For Sale

### To Move at Once

### PLANERS and MOULDERS

Berlin	No. 89 X 6" Hardwood Floorer now running	\$1000
Woods	No. 53, 30" heavy double Box Board Planer	1700
Woods	No. 28, 8" Hardwood Floorer	600
Woods	No. A1, 15" Planer and Matcher	400
Woods	No. 110, 12" heavy inside Moulder	700
Woods	No. 404B, 15" Matcher and Profiler	
Woods	No. 501 Special Hardwood Floorer	
Woods	No. 107, 15" Moulder	

Prices quoted on request.

A few more at low prices. Write us your requirements.

Machines listed above can be bought as they are, or some rebuilt—write at once for detailed description. Subject to prior sale.

Your opportunity to save. Act now for spring business. Box 116, Canada Lumberman, Toronto. 3-4

## Notice To Sawmill Owners

We are disposing of the machinery, etc., in our sawmills at Waubashene, Ontario, and would be glad to have enquiries for any kind of sawmill machinery. At present time we have unsold:

Band-Saw Mills and Saws.  
Circular Saw Frames and Saws.  
Gang-Saw Machines and Saws.  
Twin Circular Machines and Saws.  
Carriages with and without Steam Set-works for the above Band-Saws and Circulars.  
Steam Feeds for the above Carriages.  
Steam Log-Loaders and Steam Niggers.  
Trimmers and Slash-Tables.  
Lath Mills.  
Automatic Circular Grinders.  
Automatic Gang-Saw Grinders.  
Automatic Band-Saw Grinders.  
Log Haul-ups.  
Engines, Boilers, Shafting, Pulleys, Belting, Lumber Trucks.  
Everything that goes to make up a large sawmill.

This machinery, for the greater part, is of William Hamilton Manufacturing Company make, and is in first class condition and the prices are right.

Enquire from

The Georgian Bay Lumber Co., Ltd.  
3-6 Waubashene, Ontario.

## Situations Wanted

**POSITION WANTED**—Foreman for Band mill, am also a good sawyer. Assure good results. Box 97, Canada Lumberman, Toronto. 2-4

**Position Wanted**—Band Sawyer with 14 years experience. Best of references. A one nigger man. Box No. 96, Canada Lumberman, Toronto. 2-4

**MAN WITH MILL EXPERIENCE** would like position to hammer and file large circular saws in sawmill for coming season. Box 106, Canada Lumberman, Toronto. 3-6

**LUMBER SALESMAN**—experienced, requires position. Reference and full information by addressing Box 100, Canada Lumberman, Toronto. 3-4

**POSITION WANTED** by experienced lumber buyer in hardwoods, familiar with national rules, first class references. Box 107, Canada Lumberman, Toronto. 3-5

**YOUNG MAN** with 6 years' experience in lumber business wants position in Toronto lumber yard or office. Box 127, Canada Lumberman, Toronto. 4

**POSITION WANTED**—as Band Saw Filer in real good Band Mill, any size. Very best of references. Single or Double cut. 22 years experience. Box 115, Canada Lumberman, Toronto. 3-6

**Young Man, 28**, wishes to learn the lumber business preferably the selling end. Has had some selling and several years experience in accounting and office work, any place in Canada. Box No. 71, Canada Lumberman, Toronto. 1-6

**OFFICE POSITION WANTED** by clerk with six years practical experience in lumber offices. Bookkeeping, Pay-rolls, specifications, cashier. Recommendations from former employers. Quebec, Ontario or N.B. Box 129, Canada Lumberman, Toronto. 4

**PRACTICAL LUMBERMAN**, thoroughly versed in operating, buying and selling. Hard worker. Well known to trade. Familiar with costs and large operations. Can produce results. Willing to go anywhere. References and bond furnished. Box 103, Canada Lumberman, Toronto. 3-4

**RELIABLE YOUNG MAN**—would like to get agency from wholesale lumber concern, to sell in Nova Scotia and Newfoundland on commission. Have had fourteen years experience in building and handling lumber. Can furnish references. Box 121, Canada Lumberman, Toronto. 4-5

**Young, married man, 30 years of age**, wishes position as superintendent with a lumber company, has had 12 years experience in logging and lumbering and understands the business thoroughly, has also had training in industrial efficiency. Can furnish the best of references. Apply Box 91, Canada Lumberman, Toronto. 3-4

**Situation Wanted**—Married man wishes permanent position Cashier or Book-keeper have had twenty years experience in the Lumber Business, speaks English and French, can furnish Bonds and also best of testimonials, all replies treated confidential. Box 92, Canada Lumberman, Toronto. 2-5

**WANTED**—Position as Superintendent, or manager of lumber company. Eighteen years practical experience, which time have been with but two concerns, holding these positions with success. Would entertain subordinate position with future and prove ability. Forty years old and married. Unquestionable references as to ability and integrity. Box 80, Canada Lumberman, Toronto. 4-7

**A YOUNG MAN**, twenty-seven years old, with high school education, and business college training, desires position as lumber shipper, assistant bookkeeper or other clerical work. I have had charge of hiring, loading crews, sorting out lumber and loading cars in six places in the central part of New Brunswick for United Lumber Limited, with Head office at 7 East 42nd St., New York City, and a branch office in Fredericton. I worked in an office of a lumber company for over a year. Box 123, Canada Lumberman, Toronto. 4

**Accountant, Office Manager or Secretary-Treasurer**, desires position. A competent man on whom you can place full responsibility. English Canadian, age 36, married. Salary to commence \$2500.00 to \$3000.00 per annum. If you have an opportunity for a conscientious and industrious man, please communicate with Box 98, Canada Lumberman, Toronto. 2-4

## Situations Vacant

**WANTED**—Sawyers, Filers, Setters, Edgermen, Mill Hands. Apply Box 109, Canada Lumberman, Toronto. 3-7

**WANTED**—Capable lath and picket mill foreman, one who is able to take entire charge in every respect. In reply give experience and salary desired. Apply Bishop Lumber Company, Limited, Nesterville, Ontario. 3-5

**SUPERINTENDENT** for a Toronto planing mill and yard. Salary fifty dollars per week to start. If you can produce quality and quantity of work, apply Box 112, Canada Lumberman, Toronto. 3-4

**WANTED**—Assistant mill foreman for white pine operations. Must have had past experience, know how to efficiently manufacture lumber and also how to repair and maintain machinery. Apply Bishop Lumber Company, Nesterville, stating past experience and salary desired. 3-5

## Wanted

Reliable and experienced office man, capable of selling finished lumber and mill work and taking quantities off plans accurately. State salary expected. Hill-Clark-Francis, Limited, New Liskeard, Ontario. 4

## Business Chances

# Review of Current Trade Conditions

## Quebec Lumber Interests and Market Outlook

John F. Burstall, of the Quebec timber firm of J. Burstall & Co., and John Levie, vice-president of W. & J. Sharples, Limited, have left for the United Kingdom to visit the agencies of their respective firms and take observations of the British timber market with a view to business. In the meantime, the cable advices received by the Quebec firms from England up to the end of January are not very reassuring. The difficulty of making progress or of obtaining advanced figures anticipated is seemingly causing some depression but it is too early yet to express disappointment.

The British lumber interests do not seem to be worrying because their trade is not booming. It is the unsettled dark political clouds, which overspread the horizon, that give the present concern and those conditions referred to in past letters appear to be more ominous than they were a month ago. The darkest cloud which was expected to move away in the Near East, seems to be growing blacker, and it is felt generally in English business as well as political circles, that the aggressive attitude of the Turk, and the oscillating policy of France, is the forerunner of a crisis which England is endeavoring to avert as far as possible consistent with power. If the Near East question were settled, the mind of the British public would be relieved of all worry as the British Government would continue the work of ameliorating the economic problem, which of late has been slowly but surely working towards an equilibrium.

It is recognized in scientific political circles that with the elimination of the Near East question, the Ruhr difficulty would not greatly concern the British Government because the political and military scientists who have been closely watching the situation, feel confident that Germany would not in the present, at least, go to war with France. In explanation of their expert opinion, the reason is given that with France in military control of the Ruhr, and the occupation of Germany's greatest industrial centre with its resources in mines, etc., will preclude Germany from declaring hostilities, which would end in the complete devastation of the Ruhr long before the French could be driven out if it were probable by the German military forces in conflict.

The British Government and the business interests of the United Kingdom are familiar with these psychological situations and, therefore, not worrying to any serious degree of anxiety. In this regard the commercial men of Great Britain have had so many shocks of a political and financial nature that they are not greatly disturbed over the matter.

With regard to trade in general and the lumber trade in particular, the effects of the altered state of affairs are difficult to forecast and for this reason the immediate future can scarcely be called favorable. It may be, as the French Government claims, that the atmosphere will clear up and that something will in the course of some few months, develop, to put an end to the chaos, but, in the meantime, nervousness is very apparent. Until it is seen whether or not the situation is cleared or becomes more acute, commerce is bound to suffer and with it the lumber trade.

As a matter of course the depreciation of exchange and the economical conditions of Europe in general are a source of anxiety. The German mark has reached almost the vanishing point and the franc is getting weaker and British timber and deal importers cannot be blamed for their caution under such circumstances.

The one bright spot in the troubled situation is the possibility of England and the United States coming to an amicable understanding in connection with the funding of the British debt, which is sure to bring the governments and peoples of the English-speaking nations close together.

The European situation and opinions as above expressed, are gathered from the advices and confidential exchange of views between the big financial as well as commercial interests of Great Britain with their Canadian agencies. The object your Quebec correspondent has in penning them is for the benefit of the farseeing and thoughtful captains of the Canadian lumber trade. They are not by any means written in a spirit of pessimism because pessimism is not to be entertained by the business men of Canada, especially when the trade interests of Great Britain are optimistic of the near future in their confidence that the present dark clouds which so cover and mystify the European political horizon will in time roll by.

The Canadian lumber interests and the American investing public look on the bright side of things. This can be judged by the increased lumber operations in the Canadian woods and the con-

tinued boom in the building trade in the United States. The Quebec lumber interests are, certainly, not worrying. Their books are filled with orders from the United States and the only fear they evince is the continued embargo on American railway transportation. Though they are getting ready to meet any and all demands for wood which may come from the United Kingdom, they are in the fortunate position of having two good markets this year, the Canadian and the American markets, to meet the supply and demand. The Quebec export firms nevertheless are keen on keeping up this connection with the United Kingdom for a big trade in the future. There is a feeling that the steamship lines will make a substantial reduction in their ocean freight rates which will permit the Canadian lumber interests to compete to better advantage with the Scandinavian countries. The lowering of the rates between English and Australian ports has encouraged the belief that the steamship companies will emulate the example in regard to cheaper freight rates between the United Kingdom and Canada especially in the St. Lawrence route next summer.

According to letters received by the Quebec lumber trade at the end of January, the stocks in all the British yards are light, nevertheless the demand is starting. There has been very little demand for waney pine timber and no expectation of improvement for the present, at least, due, in all probability, to the upward tendency in prices. Quebec oak is, however, in demand and sales continue to lighten the supply. It is expected that there will be a good call for the shipment of oak when the navigation of the St. Lawrence reopens next spring.

It is also intimated that the spruce stocks are light and should there be a safe amelioration of the political and economic situation in Europe before the spring, there is a strong presumption that the Canadian shippers will see a rejuvenation of business that will bring to the Canadian trade some fine orders from the United Kingdom.

## Montreal Reports Trade as Coming on Favorably

Taking into consideration the period of the year, business in Montreal is being maintained at a satisfactory level. The orders for local accounts are good, while trade with American firms and also with those at outside points in Canada are of a substantial character. The growing scarcity of dry stock is an important factor in this condition, prices showing further advances, particularly for spruce. The outlook is for a continuance of this firm market for some time, although some wholesalers express the hope that quotations will not be booked to such an extent as to curtail consumption.

The mills are asking and getting considerably better prices, and are making up for some of the losses sustained in the early part of last year.

Lath, which was inclined to drop away, is showing a firmer tendency, with a considerable increase in the inquiries.

A fair amount of business is being done in B. C. forest products. The high prices, however, tend to discourage extensive buying.

Hardwoods continue to be a good market, with prices holding very firm. The chances are that the cut this season will show an appreciable increase on that of last year.

The building permits in Montreal for the first month of the year were unusually large, totalling \$485,475. The majority of the permits were for dwellings.

Last year some of the exporters complained that the ocean freight rates were too high, having regard to the rates secured by Scandinavian and European shippers, and that the rate from Canada handicapped our exporters in competing in the U.K. markets. The steamship companies declined to give any concessions on the ground that lower freights would have no influence in stimulating exports. Next seasons new rates are quoted at 80s. per standard, a reduction of 5s., which by no means meets the views of the exporters, who want a drop of a substantial character.

The British Government Timber Disposal Department has now entirely disposed of the Government stocks in Canada, having sold the last block, of about four million feet, to Montague L. Meyer, Limited, of London, England.

An indication of the rising value of pulpwood is seen in the high price paid by the Ontario Paper Co. for Quebec Government limits of 2,000 square miles in the basin of the Manicouagan River and the Outardier River, this company bidding \$6.05 stumpage rate per 1,000 feet or \$3.35 over the usual rate. Besides this, there is an adjudica-

View of Mills in Sarnia.

# BUY THE BEST

Retailers and woodworking establishments who like to get A1 NORWAY and WHITE PINE LUMBER always buy their stocks from us because we can ship them on quick notice. It pays to have the goods, but it pays better to "deliver" them.

We also make a specialty of heavy timbers cut to order any length up to 60 feet from Pine or B. C. Fir.

***"Rush Orders Rushed"***

SARNIA, ONTARIO

B. P. BOLE, Pres.   F. H. GOFF, Vice-Pres.   E. C. BARRE, Gen. Mgr.   W. A. SAURWEIN, Ass't. Mgr.

tion price of \$800,000. This company is, no doubt, desirous of securing a certain and abundant supply of pulpwood, and are paying a high price for it.

Exports of pulpwood for December totalled 85,744 cords valued at \$836,396 as against 46,379 cords valued at \$480,160 in December 1921. Exports for the nine months amounted to 749,811 cords valued at \$7,710,205 compared with 564,445 cords valued at \$7,229,593 in the corresponding period of 1921.

### Ottawa Reports That Cold Weather Hurts Trade

A slight falling off in the number of orders and inquiries received marked the Ottawa lumber market during the opening period of February. The slackened demand was attributed to the colder weather shutting off building operations and the difficulty that some American yards are experiencing in getting their shipments through, due to the operation of numerous embargoes.

The situation in regard to the embargoes at American entry points and on railroads, if anything grew worse than it had been in January. The reason for this, while it was not fully given at Ottawa, was due to snow storms in the northern states, which further tended to tie up transportation and cause congestion at terminal points. Permits for shipping through the embargoed points, grew scarcer, and more difficult to obtain.

The domestic demand was not up to what had been expected of it, but this sellers took, as a natural consequence of the cold weather and wintry conditions. The slackening up they thought would only be temporary and they believed good business would develop with the coming of the spring.

During the early part of the month the temperature sank as low as thirty three degrees below zero at Ottawa, and at many bush camps was considerably lower. In the Gatineau district temperatures of forty below were reported. While the cold weather and the attendant snow storms, served to slacken the lumbermen's sales, it was hailed with satisfaction by the woods operators, as it brought about ideal conditions for logging.

From the camps came reports that there was a shortage of labor beginning to make itself felt. Several companies reported that men who had been in the bush since late last fall, had got a small stake ahead and then left for the cities. A shortage of men to take their places was noted. The operations in the Valley camps are, however, reported to be getting on well and a satisfactory cut is looked for.

Prices continued firm and no change in comparison with the January quotations was noted. Reports were, however, current that an advance might be looked for in the manufacturers prices for low grade stock. It was the contention of some manufacturers that the spread between the selling price of the best grades and that obtained for the lower grades was altogether too great and out of proportion. Conditions with the woodworking plants and factories showed no change.

### Conditions in Ontario are Steadily Improving

Judging by the number of building permits that were taken out in the larger cities during January, there is every indication that 1923 is going to show continued activity this spring and summer. Conditions in the lumber arena are growing more active, the demand is developing on all sides, dry stocks are widely scattered and in fewer hands, and before the new cut is placed on the market, it looks as if there might be a decided shortage in certain grades, widths and thicknesses, with corresponding advances in price.

Just what state of affairs will prevail after June next when the new lumber comes on the scene, it is difficult to foretell. In the meantime, it is the easiest task possible to sell lumber of any kind if you have good, dry stock at a convenient shipping point. Inquiries are numerous and industrial concerns are eagerly scanning the sources of supply. There is a note of confidence and optimism throughout all ranks of the industry which would be immeasurably increased if the developments in Europe showed brighter signs of adjustment. One great danger facing the trade is that of a runaway market and it will require all the possible poise, balance and good judgment to guard against this undesirable turn of things.

There is no doubt that the cut this winter in the bush is going to be a record one. One leading manufacturer in Northern Ontario states that practically all the big stocks of white and red pine on the north shore have been sold to American interests, for the coming season, at a satisfactory advance over last year. It was necessary, he points out, to get an increased figure owing to higher cost of production. Another manufacturer states that wages in the bush this season average about \$35.00 per month, with board, as against \$26.32 last winter. There is a sufficient amount of labor. Provisions are slightly higher than last season but hay and oats are lower. "We anticipate," he added, "a good demand for lumber and lath, and

expect to pay higher for skilled mill labor this spring, with a possible shortage in common labor." The cold weather and moderate snow-fall have been highly favorable to logging operations in the bush, so most Ontario men report.

In hardwoods, unusual activity and strength characterize the horizon, and in some quarters there is the menace of runaway quotations. Automobile concerns continue to buy heavily and to contract ahead for desirable supplies. The call for birch and maple in the better grades is keen and American inquirers are most insistent, prices not being questioned in numerous instances. All Canadian industrials, such as furniture factories, piano concerns, etc., are beginning to make inquiries about replenishing their stocks for the coming season. Flooring manufacturers are busy and continue to absorb large quantities of oak and maple. They look for a heavy demand for their product this spring. The car situation is considerably improved of late.

Although much was said at the Canadian Lumbermen's Association gathering last month against the danger and difficulty of a runaway market, and many utterances were hurled against such a situation, there is evidence of a steady,—yes even a rapid advance—and the danger of speculative values cannot be minimized. Those who have dry stocks are holding them at an exalted figure and are getting their prices, from both domestic and American consumers. The outlook is stimulating, and stocks are scarce. Production this winter is being carried on in some centres actively but in others, it is reported, that the hardwood log harvest will not be as large as expected. The full development, so far as the production point is concerned, will not be known for a few weeks yet.

### Building Activity in 1923 Will be Greater

There is a wide-spread optimism in Canada due to the excellent industrial outlook. Lumber is in notably brisk demand, plans are being perfected for an extension of operations in the iron and steel trade, pulp and paper manufacturers are well supplied with business, and prospects for a large amount of new building are bright. It is expected that at least three hundred and sixty-five million dollars will be expended on new construction during 1923. All evidence points to the fact that there will be available an ample amount of financing for this great volume of projected building construction, says the "Canadian Building Review."

Last year saw the passing of the first great wave of speculative building and construction of the cheaper type, and this year will probably be remembered as a year in which a great volume of good building construction was produced. It is evident that residential construction will continue in volume almost equal to that of 1922, with greater activity in the more expensive types of dwellings.

The problem of labor conditions is one on which no forecast can be made, but it is quite probable that 1923 will show a fairly good spirit of co-operation between employers and labor in the building industries. Labor leaders are becoming more foresighted, and in certain of the trades there is a growing interest in the apprentice problem and in the idea of admitting a larger proportion of new men into the ranks.

The great drop in construction costs is over, and those who wish to build may do so in 1923 without fear of loss through the shrinkage of existing building values incidental to rapid deflation.

During January, construction contracts awarded in Canada, according to MacLean Building Reports, Limited, amounted to \$9,840,800 compared with \$8,392,600 in January, 1922. Residential building accounted for 26.5% of the January total and amounted to \$2,604,400. Business building amounted to \$2,858,400 or 29%; industrial building, \$1,916,000 or 19.5%; public works and utilities, \$2,462,000 or 25%. The value of contemplated new work during January amounted to \$36,714,600.

### More Northern Pulpwood Limits Sold

The Algoma Central Railway and the Spanish River Pulp & Paper Mills, Limited, were the successful tenderers for the timber in Hawkins township, sold recently by the Department of Lands and Forests, Toronto. These two corporations put in a joint bid and received the township at the following prices: Jack pine, \$3 per thousand; ties, 10 cents each; spruce pulpwood, 80 cents per cord; other pulpwood, 40 cents.

Milligan & Morrow, Winnipeg, were awarded 10 square miles adjoining berth A.T.W. 7, on the Transcontinental near Sunstrum at the following rates: Red and white pine, \$10.60 per thousand; jack pine, \$8.35; spruce, poplar and basswood, \$6.75; other timber, \$4.75; ties, 14 cents, and spruce pulpwood, \$1.20; other pulpwood, 35 cents.

## Quantity Production Lowers Manufacturing Costs

The demand for a medium priced—high-class motor boat has resulted in GIDLEYFORD sales far in excess of expectations. The Gidley organization is able to concentrate on quantity production on an unheard of scale, with the logical result—lower production costs.

This enables us to sell the GIDLEYFORD at a greatly reduced price, and we will maintain the quality that is represented by the combined names of Gidley and Ford.

GIDLEYFORDS will be allocated as orders are received and shipping dates arranged.

Price reduced to \$1250. F.O.B. rail or water, Penetang, Ontario. In Canada, Sales Tax extra.

## BARIENGER BRAKING DEVICE

This device is a real boon to lumbermen for it greatly reduces the cost of logging operations. Heavy loads can be swiftly and safely taken down steep grades, eliminating the expense of building winding roads. Neither is sand and straw hilling necessary even in the roughest country. If you are not familiar with the many advantages of the Barienger Braking Device. Write for particulars today.

**CARTHAGE, N. Y.**

## Quebec Forest Rangers Will Have School

A very important measure has been introduced in the Quebec Legislature by Hon. Honore Mercier, Minister of Lands, entitled an Act to develop forest instruction, instruction in paper making, and to promote forest research. The law refers first to the necessity of completing the system of forestry instruction by the establishment of a school for forest rangers in order to assure the recruiting of officers for the protection of the forests, and for the control of cutting and of the measuring of the timber in the Crown domains and private lands.

The provisions of the law are also to establish and organize a paper-making instruction institution to recruit expert workmen and technical men for the making of wood pulp and by-products of the fibre. Also to allow experiments to be made for the rational use of forest products.

The new law gives powers to the Lieutenant-Governor on the recommendation of the Minister of Lands and Forests, to make the necessary arrangements and agreements for the following purposes:

1. To establish and organize a school of forest rangers intended to assume the recruiting of officers for the protection of the forests and for the control of cutting and the measurement of the timber on Crown and private lands;

2. To establish and organize complete instruction in paper-making in the Province of Quebec, with a view to recruiting expert workmen as well as technical men for the making of pulpwood, paper and other similar products or by-products from the fibre;

3. In order to secure the proper working of stations and laboratories for forest research in the Province of Quebec.

The sum of \$120,000 is asked to meet the requirements and an additional amount of \$15,000 annually for the maintaining of a chair or school of instruction in forestry and surveying.

The Chief of the Forestry Service, Mr. Gustave Piche, is to be Inspector General of instruction in forestry and director-general of the stations or laboratories of forest research.

## Big Dividends from National Parks

"Sir John A. Macdonald's prediction at the time of the establishment of the Canadian National Parks, that 'they will recuperate the people and recoup the people's treasury,' is now coming true," said J. B. Harkin, minister of the dominion parks branch of the department of the interior, at a recent lecture on the national parks in Ottawa.

How true was the prediction, was shown, said Mr. Harkin, by the figures for last year. The parks, with a total upkeep expenditure of about \$900,000, had brought into the country more than \$19,500,000 in foreign money from tourists who visited Canada with the sole purpose of seeing these great works of nature. This was a dividend to the people of Canada of more than 2,000 per cent.

Mr. Harkin pointed out that exporting scenery in this way by selling it to tourists was capable of being developed into one of the country's most important sources of revenue.

## Mr. Barnjum Gets After Mr. Caine

Frank J. D. Barnjum, of Montreal, in a recent letter to the press says: I read an article recently containing a statement by Mr. Hall Caine that the forest resources of Canada are not yet even scratched. I am rather at a loss to understand what could have prompted Mr. Hall Caine to make such a misleading and entirely erroneous statement. Certainly not a knowledge of the facts. If the forest resources of Canada are not yet scratched, then of course all our forest conservationists, including our good Canadian Forestry Association, are simply wasting their time, and I have wasted some sixty thousand dollars during the past year alone in my endeavor to prolong the life of our rapidly disappearing wood supply, as I have felt it was the most important work that I could do for my country. Statements like those of Mr. Hall Caine's, when read by people outside the country who are not familiar with the situation, do a great deal of harm. Mr. Hall Caine speaks of developing or extending our network of railways. Where would he propose these extensions? We have already more railways in Canada than we can support. There is now a network from the Atlantic to the Pacific, barring the barren Labrador country and the frozen, scrubby north country. We have a fair sample of what that means in the recent abandonment of the Hudson Bay Railway, a line through a country so devoid of wood growth that Government reports stated there was not sufficient timber along the entire route to furnish wood for construction of the road, and the fact that the road has since been abandoned fully proves that these reports were correct.

A Canadian paper manufacturer told me the other day that there are already twice as many paper mills in Canada as there should be. Another official of one of the larger paper companies

wrote me that we must all use every effort to see that there is not another pulp or paper mill built in the East. I have just received a report from New Brunswick from one of my cruisers which states that more than sixty per cent. of the spruce over large areas has died in that Province during the past summer, so that previous reports given out earlier in the spring as to the amount of damage from insect pests will have to be doubled and possibly trebled.

The statements that I have made as to our critical forest situation are based on my own personal investigations, so that I know whereof I speak, and I have made the offer to the Government that if they will appoint an unbiased commission I will take them on a four months' cruise over our "unscratched" forest resources at my own expense, and if they do not report conditions worse than I have stated them to be, that I will never mention the question of forest conservation in Canada again.

## Liberal Prizes Open to All Lumbermen

In conformity with its policy of practical accomplishment in the elimination of waste and the greater utilization of the products of the forest, the National Lumber Manufacturers' Association, of Washington, has again offered a series of prizes which will be awarded to those who contrive the best method, the newest machine or device, which, in practical application, will result in an appreciable saving of labor, time, material or expense in the lumber manufacturing industry. Heretofore a single prize of \$1,000 was offered each year to the successful contestant.

At the present time the National Lumber Manufacturers Association is offering prizes amounting to \$2,000, which will be divided as follows: First prize \$1,000; second prize \$500; three prizes of \$100; four prizes of \$50.

The following are the conditions of the award:—The Award Committee will be the sole judge as to the eligibility of all suggestions submitted to this competition.

The comparative value and practical merit of all suggestions or material submitted will be judged by the actual commercial gain to be obtained and will be determined by the Award Committee of lumber manufacturers to be chosen from the membership of the National Lumber Manufacturers Association.

All suggestions or material must be submitted to the Technical and Research Department of the National Lumber Manufacturers Association, International Building, Washington, D.C.

After the prize is awarded the National Lumber Manufacturers Association reserves the right to publish at its discretion, sketches, designs or illustrative and descriptive matter covering any suggestions or material submitted, the benefits under patents to be retained by the contestant.

If the competition develops suggestions or material that will fulfill these requirements, award will be made in 1923 at the 21st annual convention of the National Lumber Manufacturers Association.

## Will Get Out Hardwood for Export

The McNeil Lumber Co., Limited, Montreal, have purchased the McCool hardwood limit, Amable Du Fond, Ont., with an area of 43½ square miles. The cruiser reports the limit to contain one of the best virgin stands of hardwood in the province, besides which there is a large quantity of railway timber, hemlock, pine and spruce. The company intends to cut the hardwoods for the export trade. It is also proposed to manufacture a large quantity of ties. The property is situated on the main line of the C.P.R. near Mahawa. It is intended to operate saw and tie mills.

## Water-killed Trees Can be Made into Pulp

In the development of water powers on Canadian rivers the erection of a dam has sometimes caused large areas of forest land to be inundated. The trees on these areas are drowned by such continuous submersion and the wood appears similar to dead and weathered wood. The use of such wood for sulphite pulp has been regarded as impracticable but the Forest Products Laboratories of Canada, Forestry Branch, Department of the Interior, have made trials of this material and find that the discolouration due to water is hardly perceptible in the unbleached pulp while in the bleached product every trace of colour due to the special nature of the material disappears entirely.

Grain harvests may be a complete failure one year and be compensated for the next year, but the destruction of a forest area by fire cannot be made good in half a century. Hence no efforts ought to be spared to keep fire out of the forest.

## It Meets Every Northern Logging Need

In swamping out roads, toting supplies, skidding logs, or making up and hauling trains, the Northern "Caterpillar"\* Logger does all the things a machine must do to be a real success in winter logging work. Its flexible tracks enable it to climb over obstructions, cross small gullies, and operate uninterruptedly both on and off the road. It is easy to control, turns in its own length and provides the correct speed for every operation. Where heavy snowfalls bury the roads and camps, the Northern "Caterpillar"\* Logger quickly plows through the drifts and gets traffic moving. We are equipped to give immediate service on spare parts. Write today for descriptive catalog.

## EDGINGS

The capital stock of the Russell Timber Co., was recently increased from \$50,000. to \$150,000.

The Port Elgin Box Co., of Port Elgin, Ont., has been granted a charter with an authorized capital of \$40,000.

J. G. Levie, of W. & J. Sharples, Limited, Quebec, is on a business trip to the Old Country.

The Haliburton Lumber Co., with an authorized capital stock of \$150,000. and head offices in Lindsay, Ont., has been granted a charter to carry on a general logging, lumbering and timber business.

Howe Sound Pulp & Paper Co., Limited, Toronto, is a new firm with federal charter to manufacture and market all kinds of pulpwood products.

John Robertson died recently at his home in Bathurst, N. B. He was 73 years of age and was for many years engaged in the lumber business.

Norman M. Smith, vice-president and general-manager of the Western Spruce Mills, Limited, Edmonton, Alta., was in Toronto recently calling upon the trade.

John Lucas & Co. Limited, Toronto, was recently granted a provincial charter to deal in all kinds of building materials. Capital, \$40,000.

Building Materials Exhibits, Limited, Toronto, has been incorporated to operate show rooms exhibiting all kinds of building materials. Capital, \$40,000.

Buskegaw River Pulp & Paper Co. Ltd., Cochrane, Ont., was recently organized to manufacture and deal in lumber and pulpwood products. Capital \$40,000.

Richard Davies, who is well known in the building trade of Toronto, has joined the Kingston Road Lumber Co. and is now assistant manager of that organization.

At the Westminster Mill, Queensboro, B. C. recently, James A. Hay, mill foreman, was instantly killed, when the shingle conveyor on which he was repairing a break in the chain, was set in motion. He was dashed against the mill timbers.

Robert Soper, Limited, Hamilton, Ont., is a new firm with a capital of \$60,000 to manufacture and deal in general outfitters supplies such as awnings, tarpaulins, rubber goods, leather goods, rope and other supplies.

Canfield-Wilmot, Limited, Woodstock, Ont., is a new firm recently granted a provincial charter to manufacture and market lumber and wood products. Capital \$100,000. Two of the incorporators are P. L. Canfield and A. G. Wilmot.

Abia Middleton died recently in Toronto, at the age of 84 years. He came to Canada from England in 1880 and secured a position in the office of the Gall Lumber Co., Toronto, with whom he was employed for over 40 years. His wife and one son survive.

D. H. McLennan, of the McLennan Lumber Co., Limited, has been elected a member of the council of the Montreal Board of Trade for 1923. Mr. McLennan was nominated by the Montreal Lumber Association.

Emile Leblanc, aged 19 years, was instantly killed by falling logs in a lumber camp on the Tobique River, Que. He was a son of Napoleon Leblanc, of New Richmond, Que., and was employed by Paul Levesque, a sub-contractor for Thomas Waugh, lumber jobber.

Weiler Bros., of Mildmay, Ont., have received an order from a New York firm for 25 carloads of sawdust. They are loading four cars and have purchased the winter's output of sawdust from two sawmills at Mildmay which is in Bruce county.

Windsor, Ont., building figures for January show an increase in value of \$416,740, compared with the corresponding month of last year. During last month Inspector Parker issued 33 permits for buildings valued at \$506,925. A year ago 39 permits were taken out, estimated value of which was placed at \$89,185.

Ernest Gignac has started in the lumber business in his own behalf at 329 Prince Edward St., Quebec. He has had 15 years' experience in the industry and was connected for a long period with the firm of Napoleon Gignac, Inc., as vice-president and managing-director. Many friends will wish Mr. Gignac every success in his new sphere of activity.

The Glengary Pulp Co., at the head of which is W. W. Thomson, of Toronto, has been organized and purchased the mill of the old Cornwall Pulp & Paper Co. at Cornwall, Ont., which has been idle for some time. The new company will put the plant in operation in the manufacture of groundwood pulp and a large number of hands will be employed.

At a special meeting of the Montreal Lumber Association a vote of condolence and sympathy with the family of the late P. D. Gordon, of Mason, Gordon & Co., Limited, was passed. Mr. Gordon took a prominent part in the activities of the Association and was president for two years.

Ernest W. Tickle, of Liverpool, England, has arrived in Canada and the United States on a business trip. He expects to spend some time in New York, Toronto, Montreal and other places. Mr. Trickle has recently taken a partner in business with him and the title of the firm is being altered to the Tickle-Bell Lumber Co. They are widely known mahogany and American lumber merchants and have a wide export and import connection.

The Inglewood Pulp & Paper Co., Limited through G. C. Cutler, Boston, their representative, has applied to the N. B. provincial government, asking that the administration take over all the company's lands on the Musquash, totalling 40,000 acres. The Inglewood company have suggested that the government use the land in the development of a fish and game reserve. This idea of a preserve has also been advanced by the N. B. Tourist Association.

Harry Turnbull, of Sarnia, Ont., died recently in the General Hospital at Galt, Ont., in which he was taken ill while on a visit. Mr. Turnbull, who suffered from kidney disease, is survived by his wife and two children. The remains were taken to Sarnia for interment. Mr. Turnbull was widely known in lumber circles in Western Ontario and was vice-president of the George N. Kernohan Lumber Co., of London. He was also identified with the Wallaceburg Lumber Co., of Wallaceburg.

A provincial charter has been granted to Letherby & Chew, Limited, with an authorized capital of \$700,000. The new firm which is composed of Ed. Letherby and Manley Chew, M.P., of Midland, is empowered to carry on the business of manufacturer of timber, lumber, lath, pulp, etc., and to operate mills. Letherby & Chew Limited, will take over the extensive business for many years carried on by Chew Bros., in Midland, of which Ed. Letherby has been the manager for many years.

The McNeil Lumber Co., Limited, Montreal, has purchased the McCool limits of hardwood, Amable du Fond, Ont. The limits consist of 43½ square miles, and according to the cruiser's report, contain one of the best stands of hardwood in Ontario. It consists of large quantities of railway timber as well as hemlock, pine and spruce. The limits are situated on the main line of the C.P.R. near Mattawa. It is intended to export the hardwoods and also to manufacture ties. A sawmill and a tie mill will be operated.

The Devon Lumber Co., Limited, of Sherbrooke, Que., who a considerable time ago sold its mill at Pine, Ont., to the McNaught Lumber Co., and its limits to the Continental Wood Products Co., are, as stated in a recent issue, winding up business. F. N. McCrea, M. P., president of the Devon Lumber Co., is head of the Sherbrooke Lumber Co., of which F. C. Baker is secretary-treasurer. Mr. McCrea and Mr. Baker have similar offices respectively in the Lothiniere Lumber Co., while the latter is in partnership with J. E. McCrea in the wholesale firm of McCrea & Baker.

The Hope Lumber Company Limited, of Thessalon, Ont., has been awarded the right to cut the red and white pine on the timber limits made up of the southern portion of the township of West Brooke, and a part of the adjoining township to the south, an area altogether of 25 square miles, on the following terms: \$13.27 per 1,000 feet board measure, in addition to the crown dues of \$2.50 per thousand feet. The award was announced recently by the Ontario Department of lands and forests.

The Department of Lands and Forests of the Ontario Government has accepted the tender of Charles Mellor of Port Arthur, for timber on Township Seven and part of Six lying East of the Canadian Pacific Railway main line near James station on the Grand Trunk. The tract is said to contain an area of thirty six square miles and under the terms of the tender Mr. Mellor is to pay the following price for the timber cut. Pine, \$9.50 per thousand feet board measure; \$6 per thousand for spruce and poplar; \$4.50 per thousand for other timber. Ties are rated at 22 cents each. Spruce and pulpwood, \$2.67 per cord and other pulp, \$1.47. Fuel wood is rated at thirty cents per cord.

Considerable quantities of pulpwood are coming down the Algoma Central now, from 40 to 50 cars being handled daily, of which about 30 are for the Spanish River Pulp & Paper Co. mills at Sault Ste. Marie, Ont. From 10 to 12 cars of pulpwood for export are brought down the line daily, consigned to firms at Manistique, Michigan, and at Appleton and points in the Fox River Valley in Wisconsin. This wood is brought largely from the section along the National Transcontinental near Hearst. The camps operated by the Spanish River Pulp & Paper Co., this winter are in the townships of Irving and Franz, near Oba, but in addition the company is taking wood out by settlers in the townships of Lowther and Way, near Hearst.

# Rubber Goods FOR LUMBERMEN

### Belting

Our long experience in the making of Rubber Belts enables us to specialize on this line. "P. M. S.," "Special Drive" and "Lion" are our leading brands for power transmission.

### Packings

"Redstone" High Pressure Sheet Packing has proved by test that it will outlast any other similar packing on the market. We make Spiral and Ring Packings, etc., that are equally reliable.

### Hose

for Steam, Water, etc., in various grades, made especially to give satisfactory and economical service under different conditions.

### Fire Hose

One or more of our twenty brands of Fire Hose will be found, not only in the best equipped Factories, Mills, etc., but in almost every Fire Department in the Dominion.

### Rubber Footwear

We make a complete line of Lumbermen's boots. For over 25 years, our Maltese Cross Brand has been the leading line in Canada. Make sure you get this old dependable brand.

# The Carriage You Are Looking For

## Our No. 1 Size

**CARRIAGE**—Has three head blocks, as shown in cut, usually set 9 and 6 feet apart, will be placed any distance apart to suit purchaser. Knees open 38 in. from saw, and is fitted with Knight or Peel dogs, as desired. Taper movement on each knee. 1 15-16 in. steel set bar with steel pinions and coil spring receder, and friction lever brake for stopping knees where required. Timbers are 5 x 6 in., or heavier if desired, well bolted and braced. Diameter of truck wheel, 12 in. Axles 1 3/4 in. diameter, and extend clear across carriage, are furnished with self-oiling bearings. Front block is fitted with timber rule, placed as desired; 54 feet of V and flat track furnished with each carriage.

**SET WORKS**—As shown in cut, is made up of ratchet wheel 12 in. diameter, 4 in. face, with set lever carrying 7 steel pawls of varying lengths; also, same number of check pawls set in quadrant. Both sets of pawls are disengaged from either side of carriage when required to recede knees. This is a positive set, without lost motion.

**FEED WORKS**—As shown in cut, consists of 16 x 12 in. drum, with spur gear keyed to shaft. Pinion or friction shaft in saw frame engages with this gear. Cable takes two or three turns around drum, and is passed around end sheaves and attached to carriage. We also furnish 26 in. drum with internal gear in place of 16 in. drum when desired.

# Adams Pointers

These powerful, efficient and economical gasoline boats, manufactured at Penetang, are giving universal satisfaction all over Canada.

Lumbermen will find it cheaper, quicker and safer to work with an Adams Pointer. They are much more economical and easier to operate than alligators or tugs.

The Adams Pointer is equipped with a powerful, heavy duty, easy running engine, extra heavy reverse gear and warping winch, and will prove equal to your heaviest work.

We can supply the machinery separate from hull if so desired.

*Write for further particulars and blue prints which give in detail where our Pointers excel.*

## The Machine that Holds the World's Record of 128,350 Laths Test Cut in 10 Hours

Four Hundred Sawmills in the Dominion are to-day using this machine.

It has all the latest improvements and for quick, clean work has no equal.

The Payette No. 1 Bolter and No. 2 Lath Mill will cut, count, tie and pile 128,350 lath in a period of ten hours. The above consisted of 4 foot laths, 1½ by ¾ inches, and constitutes a record in rapid lath cutting.

If you are not using a Payette Lath Mill outfit, you should be.

Shall we send you full particulars and prices?

## Minimize Fire Risk

Countless fires have occurred in MILLS by flying sparks from unprotected Smoke Stacks. STOP all these dangerous sparks NOW by having a

## Thompson Spark Extinguisher

Installed on top of your mill smoke stack

The "Thompson" is designed so that the draught is not in any way interfered with.

Tell us the height and diameter of your smoke stack and we will quote you on a suitably sized "THOMPSON."

# Geo. W. Reed & Co. Ltd., Montreal

# GOODHUE BELTING

For

## Saw and Planing Mills

In a Goodhue Belt you get only the best leather with the stretch taken out of it. A Goodhue Belt will always run evenly and "clings" to the pulley transmitting 100% of your power

For the wet places in the mill we have a special waterproof leather belt—"Acme." Other Goodhue Belts are "Extra" and "Standard" recommended according to the conditions under which the belt has to run.

Goodhue Belts stretch less than any other belt by 15 to 25 per cent.

## All it costs is \$136.22 per annum to own a new Boiler

A mighty modest charge— isn't it. Especially when you consider the hundreds of dollars a modern, new, efficient boiler can save you every year in coal bills, in repair bills and in bother, worry and wasted time on the part of your boiler room employees. You see, \$136.22 is a seven per cent interest charge on \$1946— which is our moderate price for a high grade 66" x 16',

125 lb. pressure, Horizontal Return Tubular Boiler, 110 h.p., complete with suspension harness and columns and built to suit Interprovincial Codes. Other sizes in proportion. Looked at that way, is it any wonder that we claim a new, modern Boiler from us is one of the most profitable and satisfactory investments you can make?

## Let Him Be the Judge

*and Swift's Products will be his choice*

Old-timers in the lumber camps are keen critics of the food served and many a time have slipped away to another camp because the grub was better. Their preference for Swift's products is thus high tribute to the quality.

But the camp operator must consider other things. Supplies ordered must reach him promptly, in good condition, and without substitution. To ensure him this service, branches have been established from coast to coast, each carrying a very large stock ready for immediate shipment.

Why not take advantage of the perfect facilities offered you by the most up-to-date Packing House in Canada? One order will convince you of the superiority of Swift products and service.

## Swift Canadian Co. Limited

# FIRE BRICK AND CLAY

We make several brands of fire brick by every known process of manufacture from a selection of various high grade Pennsylvania clays. This enables us to furnish the best for your boilers, dutch ovens, refuse burners, kilns, etc. We specialize in fire brick for power plants and if you will advise us whether your boilers are hand fired or stoker fired and kind of fuel used we can then give you the proper brick for your work.

We carry a large stock of our different brands in various sizes and shapes in our Hamilton warehouse which enables us to ship at once.

We manufacture the following well-known brands:

**"Elkco Special," "Elk Steel,"  
"St. Marys," "Keystone" and "M.D. Elk"**

Write for copy of our catalogue,

## CLOTHING

The man in the bush needs the best clothing possible and that is the kind we strive to produce. G.H.G clothing is made by highly skilled workmen using the best quality materials only. Our **DURABIL MACKINAWS** are immensely popular with lumbermen who have worn them and we believe they set a new standard for this type of clothing.

Get our prices on Mitts, Gloves, Caps, Moccasins, Rubber Footwear, Snow shoes, Sweaters, Overalls, Bedding, etc.

## TENTS

Repeilent Brand duck tents are absolutely weather and mildew proof. They are strong, durable and comfortable—the ideal tent for those who work or play in the out-o'-doors.

Repellent Brand duck is also used in manufacturing horse covers, tarpaulins, wagon covers and wherever a durable canvas is required.

We also manufacture feather-weight silk tents and regular duck tents of double and twisted yarns.

## Non-freezing, non-souring milk

**Y**OU can have fresh milk in camp—without any freezing, souring or spoiling troubles—by using Canadian Milk Products Powdered Milk. It comes to you in convenient sized drums and remains fresh and pure for months.

It neither loses its original flavor nor is any ingredient added to change its taste. It is simply pure cow's milk—either whole or skimmed, as you may order—with the water withdrawn. You simply put the water back and you have fresh milk.

### TRUMILK

Powdered whole milk — in 45 and 90 lb. drums. Order direct from us.

### KLIM

(Hotel size)

Powdered skimmed milk—in 10 lb. cans. Order from your jobber.

### MILKSTOCK

Powdered skimmed milk — in 50 and 100 lb. drums. Order from your jobber or direct from us.

*Samples and literature gladly sent on request.*

# THE LINN LOGGING TRACTOR

The Canadian Logger has evidenced his appreciation of the value of the Linn Logging Tractor for log haulage.

This winter the Linn Logging Tractors will be found operating as far East as Newfoundland and as far West as the Port Arthur District, and as far North as Cobalt.

It is our hope that every Canadian Logger will this winter avail himself of the opportunity to see Linn Logging Tractors in operation during the haul.

As Linn Logging Tractors will be in operation this winter within easy reach of every locality in Ontario, Quebec and Newfoundland, any operator will be able to see a Linn Logging Tractor operation without loss of much time from his own operation.

We will gladly supply any interested operators with the name of his nearest neighbor who is using Linn Equipment.

# Standardize on "Long" Machinery NO. 3 LATH BOLTER

The No. 3 Lath Bolter is famous for the quality and quantity of work it turns out. Freedom from break-downs, the day-in-and-day-out service that means high efficiency, is another feature which makes it first choice. These qualities are characteristic of all "Long" machinery.

Full particulars prices and specifications concerning this and other "Long" equipment should be in the possession of every mill operator. Much valuable information is contained in our various booklets. They are yours for the asking.

# Waterous

BRANTFORD, ONTARIO, CANADA

**T**HE WATEROUS EDGER has the stable investment value that only a well built machine can give. It returns a steady profit to its owner. It operates at low cost. It serves through year after year and is always the same reliable capable Edger.

The sturdy and trouble-free performance which has made the WATEROUS EDGER the recognized means of obtaining better lumber at lower cost is a definite product of WATEROUS design, materials and manufacture. The WATEROUS provision for accurate rating of the Edger to its work is additional guarantee of such performance.

As an example of the regard in which WATEROUS Edgers are held by the Saw Mill men of Canada, take the fact that there are upwards of 300 WATEROUS Edgers now at work, and that many of these are repeat orders.

These repeat orders are the best proof we have of the satisfaction that these Edgers are giving.

Here it is!

### The Handiest Lumber Truck Ever Made

Just what you need for the lumber yard—a TUDHOPE-ANDERSON DETACHABLE LUMBER TRUCK.

Note these features: The wide-tired steel wheels cannot come off whether going forward or back. Axles (13 1/4") are high quality square steel. Tires are 4 1/2" wide. If wheel spokes become bent or broken they can be replaced—an exclusive feature of Tudhope-Anderson trucks. Wood parts are best oak, air seasoned and kiln dried, well ironed and strongly braced.

### Quantity Production Lowers Manufacturing Costs

The demand for a medium priced—high-class motor boat has resulted in GIDLEYFORD sales far in excess of expectations. The Gidley organization is able to concentrate on quantity production on an unheard of scale, with the logical result—lower production costs.

This enables us to sell the GIDLEYFORD at a greatly reduced price, and we will maintain the quality that is represented by the combined names of Gidley and Ford.

GIDLEYFORDS will be allocated as orders are received and shipping dates arranged.

Price reduced to \$1250. F.O.B. rail or water, Penetang, Ontario. In Canada, Sales Tax extra.

**1923 Price—\$1250**

GIDLEY BOAT COMPANY, LIMITED, PENETANG, ONTARIO

# "Kendall" Gang Circular

The Machine that will convert your small logs into more and better lumber quicker than ever before

This illustration shows the latest design of 12" "Kendall" gang circular which takes 21-36" saws No. 10 gauge and cuts cants up to 12" in thickness. Like the other models it has a hollow mandrel 5-3/16" diameter, and water cooled saws. Each saw has a separate guide easily accessible and readily adjustable and the end bridge-tree is so designed that it swings back out of place for changing saws. As can be seen from the cut the feed, which is variable, is driven independent of the mandrel and the press rolls are steam operated. Feed rolls are 36" long—drive pulley 30 x 22", floor space 9'-0" x 11'-0".

We have no hesitation in saying that this gang circular cuts lumber absolutely the smoothest and truest to size of any machine on the market today.

These machines are made in the following sizes:  
 26" Saws for 8" Cants using weight press rolls.  
 32" Saws for 10" Cants using steam press rolls.  
 36" Saws for 12" Cants using steam press rolls.

We also make a complete line of twin circulars with either chain, rope or steam feed for slabbing logs for these machines.

**THE BRITISH COLUMBIA MILLS TIMBER AND TRADING CO., VANCOUVER, B. C.**

## An Important Announcement

HE recently organized firm of Terry-Nicholson-Cates, Limited, is new to the lumber industry in name only, all its members having been intimately connected with the trade for many years and holding executive positions with the firm of Terry & Gordon, Limited.

**Mr. H. J. Terry**, President, was also president of the old firm of Terry & Gordon Limited, which firm he organized and brought to such a prominent place during the nine years of its existence. Mr. Terry has been engaged in the wholesale merchandising of lumber during the whole of his business life, and those who avail themselves of his experience are assured service of the most efficient kind.

**Mr. A. S. Nicholson** has also been actively engaged in the lumber business all his life. He has had a wide experience in British Columbia and in the retail trade in Ontario. He established and carried on the Nicholson Lumber Company for several years having just recently sold the controlling interest in this concern. His experience makes him particularly valuable in the capacity of managing director.

**Mr. A. E. Cates** began his career as a messenger with the lumber firm of Robert Thomson & Co. From there he went to the Ontario Lumber Company Ltd., eventually becoming Secretary-Treasurer, and finally to Terry & Gordon Limited also as Secretary-Treasurer, which position he continues to hold in the new firm.

**Mr. J. E. Green** Montreal representative of Terry & Gordon Limited, also retains the same position with the new company, with headquarters in Montreal.

**Mr. R. A. Watt** is one of the best known lumber salesmen calling upon the trade in Western Ontario and the Niagara Peninsula.

**Mr. A. E. Richards** represents the firm in Eastern Ontario and has been connected with the firm a good many years.

**Mr. W. M. Gilbert** is in charge of the Accounting Department and is well equipped and thoroughly conversant with all matters in connection with his department.

## A Permanent Lumber Service

**A**FTER several years of inactivity we are now cutting on our modern fully equipped mills at Manistique and Little Lake, Upper Michigan. The timber behind these mills was purchased many years ago by the Stack interests from the then "unlimited" supply. Its quality, particularly the maple and birch, is the envy of northern mill men among whom this tract is famous.

This timber will run the mills to full capacity for fifteen to twenty years. The 40,000,000 feet annual cut will run:

15,000,000 ft. maple annually  
6,000,000 ft. birch annually  
2,500,000 ft. beech annually  
2,500,000 ft. elm annually  
900,000 ft. basswood annually  
200,000 ft. ash annually  
6,000,000 ft. hemlock annually  
3,000,000 ft. white pine annually

the balance in Spruce and Tamarack.

Our exceptional service, grades, and manufacture will be maintained.

"Low freight rate shipments by water to Toronto, Montreal, Owen Sound, Port Arthur, and other Great Lakes and St. Lawrence River Ports. Conveniently located also for rail shipments to inland points by C.P.R. or Soo line."

We will be pleased to hear from old friends and from new ones who can understand and appreciate what permanent connection with such a source of supply would mean.

# BRITISH COLUMBIA WESTERN HEMLOCK O.K.

## Ask the Man Who Has Used It

The proof of the value of wood is in the service obtained therefrom.

Lumber dealers and their customers are getting to like BRITISH COLUMBIA WESTERN HEMLOCK better the more they deal in it or use it.

It is not a hardwood but is possessed of a grain that is externally beautiful. It takes a high polish, is free from pitch and "shakes" and possesses great strength.

Don't wait until all your competitors have established a reputation for handling BRITISH COLUMBIA WESTERN HEMLOCK.

We'll be glad to send you BRITISH COLUMBIA WESTERN HEMLOCK in mixed carloads along with our other BIG CHIEF Brand Specialties, British Columbia Red Cedar Shingles, and Cedar and Fir lumber in all sizes known to high-class manufacture.

# BUY BRITISH COLUMBIA Red Cedar Shingles

The life of a British Columbia Red Cedar Shingle Roof can almost be gauged by the life of the nail with which the shingle is nailed in place. Judging from available data, the average life of the ordinary steel wire nail, which has been in such common use, is only from seven to twelve years. Some wire nails will last longer, depending upon the condition of exposure, climate and similar features, but considering our climate as a whole, at the end of from seven to twelve years a large percentage of wire nails will have rusted either completely through or so extensively that the first strong wind will complete the work. The shingles that have been held in position by such nails are then free to work down, permitting rains or melting snows to leak through and damage the interior of the structure. Examination will disclose that the fibre of the shingle itself is still in perfect condition, and a leaky roof, in the majority of occasions is due entirely to the use of faulty nails, but the average home owner, placed at such inconvenience, will not stop to reason this out and the poor wooden shingle comes in for more unjust abuse.

There are several kinds of nails which experience has proven will give lasting satisfaction, and the wise dealer will advise his customers of these satisfactory nails. A pure zinc shingle nail meets all the demands of durability required. Its principal drawback is its high cost and a slight tendency to bend under careless driving. Galvanized wire nails theoretically are rust proof, and if the galvanized coating is properly applied, and of sufficient thickness, such a nail will last as long as the shingle it holds in place. The life of this shingle roof, properly applied with these nails then is from 40 to 50 years. Pure iron nails, or the old cut or wrought nails are ideal but difficult to secure. Copper nails also constitute a perfect shingle nail.

## Lumbermen Hear Able Review of Trade Outlook in Forest Products

*Mr. Manbert Says that New Conditions and New Circumstances are Entering into Business Today - Tells How the Future Should be Met—Strongly Urges Elimination of Extravagant Practices and Sets Forth Need for Sane Definite Values, Increased Efficiency and Economy of Operation and Distribution—Standing Committees Appointed for Coming Year*

In spite of the blustery weather and the flu, the regular monthly meeting of the Wholesale Lumber Dealers' Association was held at the Albany Club, Toronto, on February 16th, and the proceedings of the evening aroused considerable interest. Alex C. Gordon, chairman, called the attention of the members to the list of standing committees appointed by the directors for 1923.

They are as follows:—

Admission & Membership—F. H. Bigwood, (chairman), H. G. McDermid, A. E. Read.

Inspection—W. E. Bigwood, (chairman), Jno. McBean, Ernest Parsons.

Audit & Finance—A. E. Gordon, (chairman), J. L. MacFarlane, Alex. Read.

Bureau of Information—H. G. McDermid, (chairman), K. M. Brown, A. S. Nicholson.

Arbitration—A. E. Clark, (chairman), C. W. Wilkinson, R. G. Chesbro.

Fire & Marine Insurance—W. C. Laidlaw, (chairman), J. B. Jarvis, W. J. Lovering.

Legislation—A. C. Manbert, (chairman), A. E. Eckardt D. C. Johnston.

Transportation—A. E. Clark, (chairman), R. Halliday, F. J. Archibald.

Trade Relations—J. L. Campbell, (chairman), Frank Kent, G. E. Spragge.

Terms of Sale—A. Leak, (chairman), C. G. Anderson, J. W. Slater.

Entertainment—L. D. Barclay, (chairman), J. R. Carter, J. Wachter, R. S. Plant, A. Smith.

Attendance—W. M. Fox, (chairman), Hugh Rose, A. E. Cates.

The chairman explained that in the past the Entertainment Committee found their numerous duties in preparing the social activities rather onerous for only three. He suggested that an amendment to the constitution be made to include two more members on the Committee. Accordingly A. E. Read read the amendment to the number which was carried unanimously and recorded in the constitution by the secretary.

L. D. Barclay, chairman of the Entertainment Committee, asked the members how many were in favor of holding an Association dance in the near future. He reminded them of what a good time they had at the last event of that kind, and assured them, with past experiences behind them, the Entertainment Committee were eager to make the next dance the best ever. It was thought advisable to have the secretary send out a questionnaire to the members for the benefit of those who were not present, asking them if they were in favor of holding such a function. About the first week in April, it was decided, would be ample time to make the necessary arrangements and a definite date would be announced later, when it is learned what the majority of the members think of the suggestion.

Chairman Gordon, before proceeding further, remarked on the absence of G. B. Van Blaricom, Editor of the "Canada Lumberman," owing to the recent death of his wife. A. C. Manbert reviewed the friendly relations of Mr. Van Blaricom and the Association and

moved that a resolution of sympathy be tendered him on behalf of the wholesalers.

At the next monthly meeting the chairman announced that a treat was in store for the wholesalers, when James B. Tudhope, of Orillia, would be the speaker of the evening. Those who know Mr. Tudhope and his bright manner of delivery will not fail to be on hand next month to hear him speak on "Some Aspects of Modern Civilization in Relation to Our Everyday Life."

In announcing the next item on the programme the chairman regretted that some of the scheduled speakers for the evening were indisposed, therefore he had much pleasure in granting unlimited time to A. C. Manbert to deal fully with his subject "Lumber Market Conditions." Mr. Manbert opened by saying he was proud to be the only speaker who had not "passed the buck." He admitted that the subject in hand was a good one, but he always felt that when addressing men who knew perhaps more about conditions than he did himself, his utterances were generally discounted at the start. Mr. Manbert was, however, wrong for once as was evidenced by the hearty handclap when he concluded.

### Mr. Manbert on Trade Outlook

Mr. Manbert stated that time alone would tell whether at the present time we were passing through a long period of business improvement or whether we were just experiencing a temporary reaction from the former period of depression. His own idea was that the situation was rather of the latter type than the former, but in saying so, he fully realized that new conditions and new circumstances were entering into our business and social life and into our relationships to such an extent that the free play of natural forces had not the same opportunity to-day as it might have had in earlier times.

Mr. Manbert then devoted himself to a consideration of the labor factor in the present business situation. Labor, of course, was the real promoting and developing factor. We started with our natural resources but it required labor and capital to bring them into relation with one another and to enable them to become effective. Labor today was decidedly short and, under the instinct to labor less for for various reasons and the instinct to curtail our immigration, the fact was that labor, both numerically and its individual attitude, was very much reduced.

On the other hand, we had, of course, implementing forces in improved mechanical methods which, to a considerable degree at least, helped to overcome the labor factor.

Practically speaking, business was good today because everybody was well-employed, both in this country and the United States. The reports of the Ontario Labor Bureau bore out this fact strikingly. It was really surprising to see how very seldom all through this winter there had been any reference made in these reports to real want, whereby municipalities had been forced to indulge in such uneconomical measures as shovelling snow from the gutter into the street, or vice versa, to make work. The steel mills were busy. The prospects for the use of building materials were good. Increased

activities in industrial concerns were furnishing assurance for a definite and constant volume of business during 1923.

All through the situation, there persisted the problem of a satisfactory increment out of business operation. Mr. Manbert presumed that the real thing troubling most people today was how to do business at a profit. There was a large volume of business being done but the margin of profit was small. In every line of productive operation, the real concern today was how to produce at a profit. Economists and statisticians were pretty well convinced that the primary producers, the manufacturers, and the people who had an opportunity and an incentive to restrict unfruitful and extravagant practices, should study the problem intimately with a view to limiting and eliminating these extravagances and bringing their business down to a more substantial basis.

#### The Margin of Profit is Small

The members of the Wholesale Lumber Dealers' Association were largely distributors and they had their part to play today in the elimination of extravagant practices, in the same way as the manufacturer and producer. He did not suppose that any of them could sound any note of extreme idealism or take any very exalted stand

H. G. McDermid, Toronto, Ont.  
One of the newly-elected Directors of  
W.L.D.A. and Chairman of Bureau  
of Information

in the matter of personal responsibility, nor did he overlook the fact that they were engaged in an extremely competitive enterprise. He was satisfied that none of them wanted to see a runaway market. They wanted to see business on a sound, enduring and stable basis. They were really very weary of the necessity for meeting continually alternating experiences—not meeting, but trying to catch the expected actions and reactions of the market. What they all wanted was a little ease, a little relief, a little reaction and a little opportunity to carry on business in a normal way; and he thought that they could help in the process, help themselves and help the general situation by striving, as best they could, to lose sight of the “price” idea and to keep in mind what he might call the “service” idea in their business.

He did not want to assume any foolish attitude. He knew that self-preservation dictated to each one of them to buy as cheaply as he could and to sell as dearly as he could; but their ability to do so would depend upon what their definite policy was. In 1919 and 1920, they had bought everything in sight, because they thought they could get away with it before anything happened, but, alas, they found they could not do it and in the end every one of them got a little tar on his fingers and some of it stuck pretty badly.

#### Eliminate Speculative Increment Idea

What he felt they should do today was that every one of them should try to eliminate from his mind the idea of speculative increment and run his business with the idea of the trading increment. In other words, they should buy their lumber with the idea of seeing if they could make a profit on the then selling price as compared with the then buying price. If they could not, they should try to find out whether they were expecting too large a profit or whether their selling force was not working well; whether there was any-

thing in their business that spelt lack of economy and lack of a definite productive force.

All this really amounted only to an attitude toward the market. No one of them could hope to change the arrangement of things, nor to stem the tide of things, but each of them in his own way and to his own satisfaction could adopt a policy that would be a definite factor towards stability this year, and would help make 1923 a more successful year for themselves, and help also in laying the foundation for the future, if they would set their faces toward the idea of bringing their business down to a recognized basis in all of the practices that ran in and through their business operations.

As usual Mr. Manbert's message was both timely and interesting and chairman Gordon in thanking him, said they were much impressed by the points brought out.

C. W. Wilkinson spoke briefly and said he could not add anything to the remarks of Mr. Manbert. He was in accord with his outlook. Business was looking better every day.

The chairman asked Mr. Frank Kent to address the members, and as no subject was specified, he chose one apparently very close to his heart. He told of the great work that he and others were helping to carry on among the under-privileged boys of Toronto. Several cases he related where conditions in the homes he visited or were brought to his attention were heartrending. He praised the work of Judge Mott, of the Juvenile Court, Toronto, with whom he was co-operating. A summer home was being conducted at Wilcox Lake, North Yonge St., Toronto, to look after the lads whom the Judge considered worthy of being given a chance, rather than sending them to the confines of a criminal asylum. Mr. Kent concluded by emphasizing how essential it was for a father to be a chum to his boy, to try to enter into his life and understand him and to spend a portion of his time with his son.

Mr. Gordon thanked Mr. Kent for his talk on the great work he was doing and added that numerous instances he knew of, had come to mind, of boys in comfortable homes who had taken the wrong path because their fathers had not been a companion to them.

#### Fundamental Status of Lumber Trade

The fundamental economic status of the lumber trade should give us substantial satisfaction. The lumber industry has emerged from the depths of depression with greater rapidity and in a more orderly way than have the vast majority of the basic industries, says Dr. Wilson Compton, of Washington, manager of the National Lumber Manufacturers Association. This general characterization of the lumber situation is, of course, small comfort to those individual enterprises, small in proportion, but large in aggregate number, which have not been able, because of collapse in their transportation service, to share substantially in the active lumber movement during much of the past ten months.

The industry as a whole has much depleted and ill-assorted stocks. It begins the year in a situation more favorable in this respect than that of a year ago. Unless the transportation service can be made more regular and more uniformly distributed, it is not unlikely that after the first of the year there will be an erratic movement in the relatively scarce stocks even though the general average may be not greatly changed. In any event there is no substantial indication that the lumber situation in 1923 will not be as good as in 1922. On the other hand there are many indications, not practicable of enumeration, that it will be as good or better; and so far as fundamental conditions of supply and demand are concerned, good for a considerable period of years to come.

#### Thirty Thousand Lumberjacks Employed

Activity now reigning in the lumber camps is said to have reached the record of the year 1920, and the production this year is expected to be normal as compared with the calm of last year.

The estimation of the Department of Lands and Forests for Quebec is that between 28,000 to 30,000 lumberjacks are now in the camps. All the regions of the province are affected by this renewal of work in the lumber camps.

The price of saw wood and pulp wood is said to be stabilizing, while its delivery is being facilitated by the return of thousands of cars from the west, which had been used for the shipment of grain. Freight cars, which had been detained in the United States have also returned and the situation is said to be most promising for the spring.

There are few farms that have not some corners, hills or ravines, or other untillable ground, where trees might be the only crop. It is a selfish argument with some, that the planter of a tree does not live long enough to benefit by it. This is not strictly true, but, if it were, every man should be glad to do something for the next generation and perhaps he could do no better than to plant a tree.

# Contract Physician and His Work in Camps

## Great Progress Has Been Made in Sanitation and Improved Health of the Men in the Bush—Qualities Which Make for Right Kind of Doctor

By Alex. R. White, North Bay, Ont.

Alex. R. White, North Bay, Ont.

My purpose in writing this article is to place as clearly as possible before those interested in the role played by the contract physicians with respect to industry, and to show the value that should accrue from the painstaking effort of the right type of man.

It seems to be the practice of many writers of such subjects to refrain from saying the things likely to hurt, and, indeed, many seem to dodge in and about so much without making a positive statement that a great deal of value would seem to be lost. To treat our topic in this manner I consider would not only be a serious mistake, but would leave the reader in much the same position as before reading our article. We shall therefore, as one of your recent correspondents

ably stated, tell you what this official did in the past, what he is doing at present, and what we believe he must do in the not too far distant future (and let the chips fall where they may).

In connection with the lumber industry of Ontario, there are employed roughly sixty-five contract physicians. The greater portion of these contracts is on the basis of a season operation, renewing the agreement each successive season. It is common for a physician to hold as many as six contracts with different lumbermen, particularly if the operations are of a small nature.

In recent years several of our larger contractors, particularly those doctors who are associated with paper milling plants and the larger pine operators, have entered into agreements which continue from year to year, with a clause providing for cancellation at say thirty days notice. I rather favor this latter style of contract, for I am certain it makes for greater efficiency in the physician. I have noticed that many doctors who contract in the manner first mentioned carry out their duties in a very lackadaisical manner. The reason is obvious; a small contract and no assurance of continuity, whereas those who are fortunate and far-seeing enough to contract on a continuous basis have something to look forward to and are able to study the employer's business, taking pride in the annual improvement in sanitation for which they have been largely responsible.

The regulations of the Provincial Board of Health state that employers of labor may contract, firstly for the sanitary supervision of all camps, works, etc., if situated in unorganized territory; and secondly, they may also contract for the medical care of their employees. Let us, for greater clarity, analyse the two questions, sanitary supervision and medical care. You will notice I place the question of supervision, or prevention, first. This attitude, I contend, is sound, for since we are primarily a preventative institution our business, and the chief work of the company physician, should in the first instance be to prevent the incident of contagious diseases among the employees, and in order to do so he must become to some extent the sanitary inspector and the health officer for the company with whom he is associated.

### Greater Precautions Against Disease

I feel perfectly justified in the statement that contracting physicians in past years have not dealt with the question of prevention as the situation demanded. If this were not so, the record of communicable diseases prevalent in past years when compared with the present would not be so apparent. It might be argued that employers frown at the doctor who criticizes the camp buildings, the unsanitary conditions which may exist at the cookery door, or the proximity of the water hole to the stable or outdoor closet. Personally, however, we feel that if the case is properly presented the employer will readily remove these hazards. It must be remembered the supervisor is

the teacher in this manner, and if the pupil be delinquent it is the duty of the teacher to devise new means in order to present his case in a more interesting light. Therefore, while the physician of a decade ago might carry on, surrounded by hazards of a serious nature, the doctor of today knows full well that the finding of unsanitary conditions likely to lead to typhoid fever and death at his camps will necessitate an explanation as to his apparent neglect either to have matters corrected or to advise the board in his monthly report.

The doctor is in a rather difficult position. Apparently he is trying to serve two masters, an impossible situation. He is appointed by the company, but may only be removed from office during the currency of his agreement with the approval of the Board;—exactly the same arrangement as a Medical Officer of Health for a town or city, and be it noted he is performing exactly the same work. The security of tenure original in the regulations of May 1921, is for the purpose of leaving the physician's hands free to deal with health matters affecting the welfare of the employees, and which in turn would, of course, effect the employers' business.

The second half of the question,—medical care of the man. Just what is implied here has I am sure, been well-known to both employer and employee alike. It is a form of insurance. One dollar, or a fraction thereof, is deducted monthly from each man's pay. The doctor visits the camp monthly or as often as his contract requires him, at which time he treats any men who are in need, and many physicians also supply hospital accommodation when necessary. It should be known, however, that the supplying of hospital accommodation has never been an obligation on the part of the doctor, although if he contracts to so do, the law would seem to be satisfied. Legally, however, the obligation is a company one or an obligation on the part of the employer. The Board have had little fault to find, generally speaking, with the carrying out of medical care on the part of physicians.

### Good Control of Any Outbreaks

I have heard the statement made frequently by well-informed people living in towns and cities from which lumbermen draw their supply of men, that lumber camps were breeding places for all manner of diseases. I have also heard the same remark passed by several physicians. Some of whom further state that these towns and cities are polluted by men returning from camps from whom spring epidemics of such diseases as smallpox, typhoid fever and mumps. I am not prepared to say that epidemics have not sprung from men returning sick from camps. This is quite possible. I do know, however, that the camps are polluted by the diseases mentioned, by the employees being shipped to camp from homes where communicable diseases exist, unknown to the authorities of these same towns and cities. Of this we have ample proof. It should be pointed out that the control of communicable diseases in camps under our present arrangement is relatively easy as compared with the control of epidemics in densely populated communities. Indeed I see no reason for any disease becoming epidemic in our woods camps, that is to say beyond the first one or two cases. I also believe that when any of our common and well-known diseases assumes serious proportions there is a general laxness somewhere requiring investigation.

Taking the industry as a whole, contagious or communicable diseases are somewhat rare as compared with towns or cities. This is a statement which it seems hard to credit, but is nevertheless a fact. The perplexing problems to be met with by the city Health Officer in his search for the original infective agent, the first case in any epidemic, together with the method of transmission, is, by reason of the simple life of the woodsman, fairly easy to diagnose and to control. It should be remembered that to quarantine a town or even a village, is generally impracticable, and often without value. It is true you might prevent transportation companies from carrying passengers to and from an infected town, thus protecting the communities adjacent thereto. You cannot however, control the comings and goings of individuals within the infected town after the disease has become widespread and sometimes it is difficult to administer the necessary immunizing serums or vaccines.

There are, of course, difficulties to be met in imposing quarantine in woods camps and the contract physician must needs have a

strong personality if he is to convince employees, as well as the management, that such a restriction is necessary. The camp, however, has this advantage over the community in that it may be said to represent a glib family with the foreman the head of the home, and once quarantine is properly imposed you know exactly just who are affected. Those exposed, but who have not yet come down with the disease, may still attend to the daily duties so that matters go on as usual, save that no one may leave camp or mingle with the general public. An added precaution taken is that no employees must be discharged or employed while under restraint. Few men will therefore leave camp leaving behind them a month's swages.

This procedure may not be strictly according to law, but it is justifiable and distinctly effective. Surely the end justifies the means when human life is involved, particularly when no great hardship is being imposed.

In contrasting the prevalence of infectious diseases of recent years with the present time, I would ask you to note carefully how a general knowledge of the modes of infestation have assisted in bringing about this greatly desired result.

It is not sufficient that your doctor and the Board's inspector only possess the knowledge of how these diseases are spread. Every camp foreman, every walking boss or superintendent, and even your employees must begin to understand, at least, the simple facts concerning these outbreaks, and, to this end, I believe, short talks to the men in the bunk houses on simple hygiene would be good. Men must be taught that typhoid fever is not obtainable by drinking water from a virgin swamp far removed from human habitation. They must learn rather that in some manner are discharges from some infected person's bowels has been swallowed either through drinking water or carried by flies from an open closet to an unscreened kitchen or possibly some one connected with the cookery staff is carrier of the disease.

#### The Smallpox Scourage and Deaths

From the late Inspector G. Young's reports I find that from 1910 until 1916, no special statistics representing the occurrence of disease in camps have been kept. It would seem that such statistics have been compiled in the Board's blue book by district. I find it quite impossible, therefore to state definitely the proportion of these cases which may have occurred in camps. I find, however, that in 1910 smallpox occurred at Kearney, Whitney, Massey and in some camps near Cobalt and, of course, we have in the same year the great typhoid fever scourage at Cobalt, Kelso, Porcupine and Haileybury, and while it might be argued that mining camps are different, yet there was in those days a certain similarity. At Cobalt, there were according to the records one thousand one hundred cases, but no mention is made of the death toll.

In 1911, I find Dr. R. W. Bell makes mention of smallpox and typhoid fever at camps near Madawaska and at the mouth of the Spanish River. He also states that the stage would seem to be for a general smallpox epidemic throughout Northern Ontario. The rapidity with which communicable diseases unsupervised may spread is well instanced by reference to the epidemic of typhoid fever at Ottawa during this year for in Dr. R. W. Bell's report to the Board he mentions that from January first to March eighteenth no fewer than eleven hundred and ninety-six cases developed, with a heavy death toll.

I could give you some interesting figures of the prevalence of these diseases in construction camps, particularly in railway camps. These stories I have gathered from physicians who supervised the works at that time. I make no further mention of these, however, there being no official record to support my claims.

It has always been a difficult matter to separate the diseases which occur in any particular industry in territory without municipal organization. The physician in attendance might send his returns to the nearest Medical Officer or to the Secretary of the Board at Tor-

onto, but I suspect that in many instances no returns whatever may have been made. We of today experience this same difficulty, but to a lesser extent. By careful watching and co-operative arrangements with the contract physician we can generally tell almost exactly the number of infectious diseases which occur in camps during winter, and in addition we make a point of knowing just what may have been responsible for the outbreak. We expect the doctor to write a history of the case when reporting (as he must) each month.

#### The Record in Cutting Camps

From the year 1918 until the end of the season of 1922, the following diseases occurred in cutting camps:—

1918,	Smallpox,	Byng Inlet,	6 cases
		Foleyet,	6 cases
1919,	Smallpox,	Biscotasing,	10 cases
		Camp near Timmins,	2 cases
1920,	Smallpox,	Kemny's Siding	1 case
		Laveck,	5 cases
		Madawaska,	3 cases
		Camp, Township of Blythe	1 case
1921,	Smallpox,	Kenebeek,	1 case
		Kiosh,	8 cases
		McLaren's Bay,	3 cases
		Brule Lake,	1 case
		Kenny's Siding,	1 case
Total			44 cases
1918,	Typhoid Fever,	Georgian Bay Lmbr. Co.,	11 cases
1919,	Dysentery,	Espanola,	20 cases
1920,	Typhoid Fever,	Woods camps near Gogama	10 cases
1921,	Typhoid Fever,	Kenny's Siding,	1 case
		Brule Lake,	1 case
		Chudleigh,	1 case
		Joko River,	2 cases
		Keewatin Lumber Co.,	2 cases

Total Typhoid	28 cases
Dysentery	20 cases
Mumps,	2 cases
Pakesley,	2 cases

Reported cases for the year mentioned 94 cases

When we consider the total case record for the years mentioned as being ninety-four cases, and add to this the fact that we are possibly, taking into consideration our woods camps, saw mills, etc., employing roughly thirty-five thousand men, this is very reasonable and would constitute an enviable record for most towns of, say, ten thousand inhabitants.

#### The Kind of Doctor to Engage

Someone may ask why smallpox cases seem to have occurred largely in the districts of Nipissing, Temiskaming and Sudbury. This is known among health workers as smallpox territory, by which I mean that there is a great, unvaccinated population there, and for some reason or other the large French population of these districts seems to provide us with most of our cases, particularly in organized territory.

Let me say in conclusion, lumber companies should choose the type of physician who is to control the destinies of the operation with great discretion, for the Doctor, who has the real interests of the company at heart and is popular with the men is a big asset. He must needs be a man in whom the pioneering instinct is strong. He must like the rough work, not wholly for the generous remuneration it provides, but also for the progress he is able to make in bettering living conditions at a minimum of cost, and above all he must be liked by the lumberjacks or he cannot succeed.

These are some of the qualities I think your physician should possess and to this end our Board are always anxious to assist employers in selecting a suitable doctor for their particular work.

## Some Short Lengths Culled for Busy Readers

Business is like a wheelbarrow—it stands still unless someone pushes it.

"One kind word while you can hear it, beats a brass band on your last ride."

We doubt if national laugh week will be unanimous success. Somebody is sure to have a note falling due in that week.

The majority of lumbermen who have seen electrified outfits at work are enthusiastic about this form of motive power. It is claimed

that before long electric logging will receive official recognition because of the anxiety of governments to prevent forest fires.

The convincing argument is, of course, the fact that it costs less, output is increased, and lumbermen are willing to listen to arguments of this kind.

Canada has over 2,500 sawmills and there is some kind of logging outfit feeding nearly every one of them. The total capital invested in the lumber industry amounts to about \$235,000,000 making it one of Canada's greatest industries. The adoption of electric drive wherever possible, is a feasible thing, one worth working for and easily capable of accomplishment, if lumbermen are shown what electricity will do for them.

# *Educating Mill and Yard Men in Safety Work*

## *Members of Ontario Retail Lumber Dealers' Association Impressed With Fact That Physical Hazards May be Reduced by Use of Mechanical Safeguards*

The report of the Insurance and Workmen's Compensation Committee of the O.R.L.D.A., of which W. C. Laidlaw, of Toronto, is chairman, was presented at the recent annual meeting of the Association in Windsor, Ont., and aroused much interest.

Under the heading of "Fire Insurance" the report, which was adopted, said:—

This is a subject that should have the careful consideration of every member of our Association, as it is a matter of much importance in the lumber business. It has been suggested that a lumber mutual insurance company might be organized in Ontario. Your committee, as at present constituted, is not in favor of this proposal. The field in Ontario for a company specializing in lumber risks only is too limited, in our opinion, to give a fair average. There are in the United States a number of quite large lumber mutual companies that have been very successful because they have a large field in which to work. A great many of our members are familiar with these companies and carry insurance with them.

Our local Canadian companies have been jealous of the competition of these outside companies, and for some time have been trying to get legislation to shut them out. During 1922 an Act was passed imposing a tax of 5% on the net premiums paid to unlicensed foreign companies, including the lumber mutuals. This tax is rather irritating, and we hope during 1923 to succeed in having it repealed. The lumber mutual companies, however, have undertaken to refund to their clients the amount of this tax; so as far as we are concerned, it has not meant any additional cost of insurance.

### **Workmen's Compensation Insurance**

This is a subject that is becoming of more interest to all of us every year, as it affects our expenses very considerably. The accident cost shows signs of becoming less. The report for 1922 is not yet available, but the report for the year 1921 indicates a reduction in the amount of compensation paid. The Workmen's Compensation Board has fixed the provisional rate for Class 4, planing mills, etc., at \$2.00, which is the same as the rate for 1921. We hope that there may be a reduction in the rate for 1923, but that will depend on the actual figures for 1922 when they are finally issued.

It is tiresome to listen to a list of figures being read, so this report will not impose on you at any length in that regard. You will be interested, however, in these figures for comparison between the final results of 1920 and 1921 in our class.

Total net income .....	\$302,000	\$266,000
Total expenditure .....	286,000	217,000
Actual compensation paid .....	85,000	69,000
Paid for medical aid .....	26,000	19,000

The other expenditures are made up of pensions and compensation estimated for outstanding accidents and continuing disabilities. The Workmen's Compensation Board has accumulated a very healthy balance to cover contingencies, and we hope that very soon they will consider the amount collected sufficient to provide for all the contingencies, and will reduce our rates.

The only sure method of reducing rates is to reduce our accidents. We think a great deal can be accomplished in this direction by educating our employees to the safety idea. We urge each employer, superintendent and foreman to give serious thought to this subject, and to try and get the interest of the men directed on safety-first lines.

The Wood Workers Accident Prevention Association has been organized to help this work. Their inspectors call regularly at each of your plants with the idea of assisting you to reduce the cost of accidents. They will suggest to you how the physical hazards may be reduced by the use of mechanical safeguards. They are also working in your interest to keep before your men the idea of safety. When these inspectors call, please give them an opportunity to be of service.

### **Accidents in Yards and Mills**

Through the kindness of the Workmen's Compensation Board, your committee has been given access to a special memorandum showing certain outstanding causes of accidents in planing mills and lumber yards. During the year 1922 the heaviest accident record is from handling material, which accounts for 19% of all accidents in our class. Trim and rip saws account for 10% of the accidents, and

other saws not specified for 13%. Other machine tools account for 10% of the accidents, and hand tools for 6%. The following is the order in which the machine accidents have happened. The largest number of machine accidents occur on jointers, next come planers, then stickers, shapers, lathes, sanders, tenoners, and abrasive wheels.

Some of the most serious accidents in the point of cost occur through blood poisoning. It has been found that wood splinters cause blood poisoning, and great care should be taken in first aid treatment of these accidents. It has been claimed by some wood workers that splinters from oak are more likely to cause infection than splinters from other woods. The Provincial Department of Health is making an investigation at the present time on this subject.

The system of merit rating has been under discussion this year. For several years the Workmen's Compensation Board has had a system in effect whereby employers with a good experience for one year received a refund, and those with a bad experience paid an additional charge. The Board has lately decided to place the merit rating on a three-year basis instead of a one-year basis, which will be more equitable. It has been suggested to the Board that the percentage for merit or demerit rating should be higher than it is, but no change has been made in this regard so far. It should be borne in mind in this connection that the principle of insurance covers the average of the whole class. An accident involving compensation to the extent of \$10,000 might happen to some small employer, who would be in financial trouble if he had to pay a large part of this loss. The object of merit rating is to encourage the man who takes care to avoid accidents without departing too far from the basic principle of insurance.

### **Midsummer Outing Down St. Lawrence**

At a recent meeting of the newly-elected directors of the Ontario Retail Lumber Dealers' Association it was decided to hold the usual midsummer outing and the secretary was instructed to enquire into the possibilities of a trip by steamer on Lake Ontario and through the Thousand Islands. A report will be presented on this matter at the spring meeting of the directors.

One of the newly elected directors of the Association is W. E. S. Savage, of Mimico. He has long manifested much concern in the work of the organization and is a live wire in the retail ranks. For many years he was engaged with George Rathbone, Limited, of Toronto, and starting in business a few years ago on his own behalf in Mimico, he has done remarkably well.

The entertainment feature in connection with the recent gathering of the Ontario Retail Lumber Dealers' Association at Windsor, was furnished by the members of the South West Ontario Retail Lumber Dealers' Association and they left nothing undone. Special committees had charge of the work on hand and every arrangement was well looked after. S. Herath, of Ojibway, was the chairman of the Entertainment Committee, and was ably assisted by E. C. Russell, of Walkerville, president of the S.W.O.R.L.D.A., George N. Kernohan, London, vice-president, B. F. Clarke, Glencoe, secretary-treasurer, and many others.

### **Montreal Lumber Retailers Elect Officers**

The Montreal Retail Lumbermen's Association elected their officers at a meeting held on February 8th at the Queen's Hotel. In the absence of J. P. Dupuis, who was out of the city, W. H. Thomson presided.

In order that each section of the city should be represented on the directorate, the city was divided into five districts, each represented by a director. The officers are: President, J. P. Dupuis, (J. P. Dupuis, Limited); Vice-President, Stewart Rutherford, (Redfern Lumber Co.); Directors, District No. 1 (extreme north) J. A. Bonneau, (Millen & Frere); No. 2 (north) G. Lebel; No. 3 (centre) W. H. Thomson, (Thomson-Kneeland Lumber Co.); No. 4 (East) J. P. Abel, (J. P. Abel, Fortin & Co.); No. 5 (West) L. W. Halliday, (William Rutherford & Sons Co., Ltd.) The officers replace the temporary officers and committee elected at the second meeting.

The Association, which now numbers 34 members, meets every other Wednesday at the Queen's Hotel.

# What the Lumber Trade is Doing in Canada

J. P. Dupuis, president of the Montreal Retail Lumbermen's Association, was a recent visitor to Quebec City.

Frank Buck, of Chicago, chief of the inspecting staff of the National Hardwood Lumber Association, was in Toronto recently on business.

The sawmill and stables of M. Bertrand, Masham Mills, Que., were recently destroyed by fire. The loss is partly covered by insurance.

M. & K. Lumber Co., Ltd., Toronto, is a new firm with provincial charter to manufacture and market lumber, lath and shingles. Capital \$75,000.

The erection of a sawmill to cost \$5,500 is contemplated at Whonnock, B.C. The principals are Mayor Philpot and R. S. Whiting.

The Mattawa Lumber Co., Ltd., Montreal, is a new firm recently incorporated with a capital of \$50,000, to deal in all kinds of wood products.

A. E. Clark, of Edward Clark & Sons, Limited, Toronto, and Mrs. Clark are spending a few weeks at various points in Florida and are enjoying the southern sea breezes.

W. H. Harris, of the Frank H. Harris Lumber Co., Toronto, left last month for the southern operations of the firm at Meridian, Miss. He will remain in the south for some weeks.

Oliver Carlaw, of Paisley, Ont., recently purchased the interest of a retail lumber business from J. T. Fisher, of that town. He is now operating this as well as the grist mill which he owns.

G. W. Webster, of George Webster & Sons, Swanton, Vt., was a guest at the luncheon of the Montreal Wholesale Lumber Dealers' Association on February 21st.

Belle River Lumber Co., Ltd., Quebec, P.Q., has been incorporated to conduct a general business of manufacturing and selling the product of the forest with a capital of \$20,000.

Weismiller Bros., Bala, Ont., have installed a new Yates type A-1 15 inch planer and matcher equipped with single profiler and six knife round cylinders, which has greatly increased their output of quality finished stock.

Duncan McLaren, president of the Union Lumber Co., Toronto, and Mrs. McLaren left recently by the "Adriatic" from New York on an extended Mediterranean cruise, and will be absent until the end of May.

A. C. Manbert, of the Canadian General Lumber Co., Toronto, left recently for La Jolla, California, where his wife and daughters are spending the winter months. Mr. Manbert will be away for some weeks enjoying a well earned holiday.

A charter has been granted to the Adanac Lumber & Mfg. Co., Limited, with headquarters at 34 Victoria St., Toronto. The new organization is composed of several local citizens, and a meeting for the election of officers will be held in a few days.

W. W. Carter, president of the Fesserton Timber Co., Toronto, and Mrs. Carter are spending a few weeks at St. Petersburg, Florida, where they are enjoying the ideal climate of that delightful resort. There W. C. Irvin, of Toronto, and William Laking, of Hamilton, are also having a splendid holiday.

Southampton Plywoods, Limited, who some time ago took over the business of Panels Limited, at Southampton, Ont., in the manufacture of table tops, panels, etc., are doing a good business and report the outlook for the coming year is promising. J. Hood is the general-manager of the organization.

C. Blakeley, manager of the Montreal office of Cox, Long & Co., Limited, is recovering from a very serious attack of pneumonia, which threatened his life. R. H. Lightburne, of the London office of the company, has arrived in Canada to look after the interests of the firm during Mr. Blakeley's absence.

John B. Reid, of Toronto, who is spending the winter months in St. Petersburg, Florida, says there are about five hundred Canadians there and lots of Toronto people, among them being several lumbermen, "We are having" he adds, a great time bowling. The weather is warm and the days delightful. Every place here is crowded and it is difficult for the late arrivals to get rooms but all seem happy. We have about four hundred members in the Canadian Club here."

Among the recent callers on the trade in Toronto was Mr. Atwood, of the Atwood Lumber Co., Grand Rapids, Mich., Mr. Forest, of the Lesh-Matthews Lumber Co., Chicago, Mr. French, of the William Weston Lumber Co., Boston, and Mr. J. H. Green, of De-

troit, manager of the hardwood department of the H. W. Kanouse Lumber Co., Saginaw, Mich.

John A. Belford, of Ottawa, Ont., who is a widely known lumber salesman, has discontinued operations under his own name and has become associated with D. G. Gilmour. The firm will continue under the old style of D. G. Gilmour & Co., and is removing its offices from the Citizen building to 142 Wellington St. Ottawa, where the quarters formerly occupied by the Royal Trust Co. have been secured.

The Pacific Coast lumber mills are flooded with orders for overseas points, and a brisk season is looked forward to, says an Edmonton lumberman. Conditions are not so good with the mills in the interior of the province, and although the majority are logging, the manufacturers do not anticipate any great demand from the prairies, until such time as good crops wipe out some of the present financial difficulties. At the present time the interior mills are fostering the markets in the east and Ontario, and the bulk of the lumber will go to those areas.

The production of the Canadian Western Lumber Company of Fraser Mills, B. C., in December totalled 3,513,487 feet of lumber, as compared with 4,876,102 feet for December, 1921. Lumber sold amounted to 8,018,898 feet, as compared with 4,596,401, and price realized at \$178,925, compared with \$118,053. For the twelve months of 1922 lumber manufactured aggregated 110,418,820 feet, as compared with 89,927,331 feet for 1921, and lumber sold 116,869,587, as against 85,679,969 feet. Aggregate price realized amounted to \$2,803,943, as against \$2,237,935.

The Quebec Streams Commission has received tenders for certain damming work at Kenogami which, it is estimated, will cost one million and a half dollars. A deposit of \$150,000 is required with each tender. The work, which is to be completed in the fall of 1924, comprises the construction of two large dams on Sable and Chicoutimi rivers, and small damming work on nearby streams. The object is to guarantee a sufficient level of water through huge reservoirs to allow Price Bros. and the Chicoutimi Pulp Mills to operate during the whole year, instead of laying off a large number of employees at this time of the year, as customary.

The creditors of Riordon Company, Ltd., Montreal, are in receipt of a circular letter from the creditors' committee, signed by R. Montague Davy, chairman, which reads in part:—"As you will recollect, the general meeting of creditors held on November 16th, 1922, requested your committee to continue to serve, and to fill any vacancies which then existed or which might occur. At a meeting of the committee held later in the day the two vacancies caused by the resignations of Messrs. W. S. Sample and Chas. E. Fraser were accordingly filled by the election of A. E. G. Madley, of Montreal, and A. L. Perkins, of Powassan, Ont. The personnel of the committee otherwise remains as before."

The annual meeting of the Provincial Paper Mills Co. was held at the head office in Toronto recently and a satisfactory report of the past year's operations was presented. I. H. Weldon was re-elected president, T. A. Weldon vice-president and S. F. Duncan secretary-treasurer. The company is the largest producer of book papers in Canada and has mills in Port Arthur, Thorold, Mille Roches and Georgetown. During 1922 the plants were kept busy although production was principally on the lower grades of paper. The profits were slightly in excess of 1921, the figures being \$729,261 in 1922 and \$728,775 in 1921. Interest and dividends received were \$34,700, making the total returns for the year, \$763,961 as compared with the 1921 gross of \$761,395.

It is reported at Port Arthur that negotiations are under way between representatives of the Great Lakes Paper Company and the owners of the Long Lake and Nagagami concession which are located east of Lake Nipigon, and that the proposal is to merge these with the Black Sturgeon and Pic limits already owned by the Great Lakes Company who would proceed with the whole development as one scheme. The Long Lake and Nagagami concessions were sold by the Government during the depression of 1921 and brought low prices, considering their timber value. The greater part of the timber is naturally tributary to Lake Nipigon, although no condition was attached making it obligatory on the part of the successful tenderer to use Hydro power, which is available through the Cameron Falls development on either of the concessions.

Every employee should realize that the danger of fire is always the mills should burn it would mean a personal loss to him by reason of interference with his regular employment. He should, therefore, feel a personal responsibility for the safety of the plants.

## New Name of Widely Known Lumber Firm

**Successors to Terry & Gordon, Limited, are Terry-Nicholson-Gates, Limited—Personnel of Organization.**

H. J. Terry, Toronto

An announcement of much interest and importance to the forest products industry is that the successors of the well-known wholesale firm of Terry & Gordon, Limited, are Terry-Nicholson-Gates, Limited, with offices at 703 and 704 Confederation Life Building, Toronto, which were the headquarters of the old firm. Other than in the change of name, the personnel of the new organization does not need any extended reference in the "Canada Lumberman."

H. J. Terry, who is president of the new company, was also at the head of the former organization. He is well and worthily known, having been for over twenty years before the trade. He is one of the founders of the Wholesale Lumber Dealers' Association, Inc., and during

the past year was its presiding officer. He has always shown deep concern in Association work. Mr. Terry is a director of the Rotary Club of Toronto and is also active in its social welfare campaigns and other humanitarian movements. Born in Toronto, Mr. Terry has resided in the city all his life.

A. S. Nicholson, who is managing director, retains the same position as he held in the old firm since its incorporation. He is intimately known to the retail trade in Ontario through his connection with the Nicholson Lumber Co., Limited, of Burlington, and just recently disposed of his interests in that concern. Mr. Nicholson was one of the original directors of the Ontario Retail Lumber Dealers' Association and was active in the formation of the association. Practically his whole business life has been devoted to the lumber industry. He has had considerable experience in British Columbia, having been associated with a manufacturing concern in the Mountains as early as 1902.

A. E. Cates, secretary-treasurer of the new company, has spent all his life in the lumber arena, his first position being as a messenger boy in the Toronto office of the Robert Thomson Co., of Hamilton. He later became associated with the Ontario Lumber Co. and eventually secretary-treasurer of that body. A few years ago he was appointed to a similar position with Terry & Gordon, Limited. When not engaged in business Mr. Cates is an enthusiastic bowler and motorist.

J. E. Green, Quebec representative of Terry & Gordon, Limited, retains the same position with the new company, and his headquarters will continue to be in Montreal.

A. E. Richards, who covers the ground East of Toronto, is a hustling young man who has been with the organization for a considerable period.

R. A. Watt, who represents the firm in Western Ontario and the Niagara Peninsula, has been associated with it for many years and is an aggressive salesman.

W. M. Gilbert is in charge of the accounting department and is thoroughly conversant with all matters in connection with that branch.

Many friends in the lumber industry will join in sincere wishes that the newly-organized firm of Terry-Nicholson-Gates, Limited, may enjoy a large measure of success and expansion.

### Eastern Cut Curtailed By Deep Snow

Lumbering operations in the province of New Brunswick as well as that of Nova Scotia, especially along the coast was badly crippled as a result of exceptionally heavy snow storms. As a result it is feared that the cut will not be much more than fifty per cent of the quantity planned. The curtailment resulted in many crews being withdrawn from the woods and operations halted until conditions are more favorable. Some operators are pessimistic and say that there is little prospects of a betterment because of the fact that there was so little frost in the ground prior to the heavy snow falls. In the northern part of the province of New Brunswick

reports indicate that conditions are quite opposite. It is said that in some places there has not been sufficient snow to facilitate operations, but that the cut will be as large as planned.

Leading lumbermen announce that in the southern parts of New Brunswick there is no denying that the cut will not be more than fifty per cent of that decided on. They expressed an opinion that Albert county was hit hard and from all indications only twenty-five per cent of the original planned cut would be brought out of the woods. Other merchants contend that they do not think conditions will be as serious as first reports might indicate. They said many feared an over-production, but, at least, there is now fear of that and there should be a sufficient supply for the demand.

Along the Miramichi there is lots of snow but not within fifty per cent of the amount that fell along the coast, according to late reports. From Campbellton comes a report that there is sufficient snow to carry on, but by no means enough to retard operations. Advices from Kings and Queens counties are to the effect that the snow is too deep for operations and activities in many localities entirely ceased for a while. Some operators in these districts say they fear they will not be able to get a stick out this year largely due to the condition of the ground and the absence of frost.

Commenting editorially on the situation the Evening Times of St. John N.B. says: "The depth of snow would seem to be a guarantee that the cutting of lumber will not be overdone this winter. It should also ensure good log-driving in the spring—if it does no worse."

### Sudden Death of Harry Turnbull

Lumbermen throughout Western Ontario heard with deep regret of the death of Harry Turnbull, of Sarnia, which occurred in the General Hospital, at Chatham, recently, following an acute attack of Bright's disease and peritonitis. Mr. Turnbull had attended the Ontario Convention in Windsor, and was returning home, getting as far as Chatham, when the attack caught him. He was hurried to the hospital, where every medical aid was given him, but without avail. Harry had a wide circle of friends, who will miss his ever cheerful presence, while many customers will miss a shrewd business man, and one well versed in the forest products business. His early education in the lumber line was received in Huntsville, when he was a lad. He was also a partner of the LeBel-Turnbull Lumber Co., of Sarnia, which later was destroyed by fire. He was manager of the Spanish River Lumber Co. for years, and of late years he represented several companies, selling on a commission. He was one of the largest stockholders in the Wallaceburg Lumber Co., and was one of its directors. He was also interested in the Geo. H. Kernohan Lumber Co., of London.

Mr. Turnbull is survived by a widow and two sons, who, together with a host of friends, mourn his early death. The funeral which took place from his late residence, Brock St. N. Sarnia, was attended by many representatives from lumber firms all over Ontario. Numerous lovely wreaths bore silent testimony to the place he held in the hearts of his friends.

### Prizes in Aid of Forest Conservation

Frank J. D. Barnjum, of Annapolis Royal, N.S., and Montreal, who recently awarded \$5,000 in prizes for the best treatise on the most practical methods of preserving Canadian timber from further destruction by the budworm and other insect pests which have recently caused such great losses to our forests, is now offering \$2,000.00 in prizes for the most convincing argument in favor of prohibiting the export of manufactured wood from Canada. One thousand dollars of this will be paid for the best argument in the English language and \$1,000.00 for the best in French, in the following manner:—Five hundred dollars to the winner of the first prize in each language; \$250.00 to the second; \$150.00 to the third, and \$100.00 to the fourth. The competition is open to all residents of Canada. The essays must not exceed 600 words in length. The competition will close on March 15th and no entry will be eligible bearing postmark later than that date. Entries should be addressed to Frank J. D. Barnjum, New Birks Bldg., Montreal, Que.

Mr. Barnjum is a strong advocate of the policy of retaining Canada's timber supply in the country for the protection of Canadian industries and for the benefit of our own people and one of his purposes of instituting this competition is to start more people thinking and also obtaining Government action on what he regards as Canada's most vital problem, namely forest conservation.

At the annual meeting of the British Columbia Lumbermen's Association held recently in Vancouver, Mr. J. D. McCormick, manager of the Canadian Western Lumber Company, was elected president.

### New Director of Ontario Association

M. J. McDonald, Port Arthur, Ont.

Martin J. McDonald is one of the newly-elected directors for the Northern District of the Ontario Retail Lumber Dealers' Association. He is manager of the Thunder Bay Lumber Co., Limited, Port Arthur, and takes a deep interest in Association work. Mr. McDonald is a strong acquisition to the Executive of the O.R.L.D.A., and has had considerable experience in the lumber line. He came originally from Appleton, Wis., where he was connected with the Miller Co. In 1909 he entered into partnership with A. D. Kennedy and opened up a retail lumber and fuel yard in Port Arthur which was known as the Thunder Bay Lumber & Fuel Co. Some years later he returned to Appleton, still retaining his interest in the Port Arthur concern,

and together with his brother, D. J. McDonald, of the McDonald Lumber Co., of Winnipeg, took over the Miller Lumber Co., when they first became acquainted with the lumber business. Last year the subject of this reference disposed of his interests in the Appleton yard and returned to Port Arthur, taking over the entire business of the yard there under the name of the Thunder Bay Lumber, Co. He also opened a new branch at Fort William, the latter venture meeting with considerable success.

### Noted Lumberman Sounds Warning Note

One of the most serious problems facing lumbermen, from time to time, is the very great fluctuation in the lumber market. This very materially affects the construction industry, and is a subject that should be considered very seriously in all of its phases by lumbermen, says John E. Lloyd, president of the National Retail Lumber Dealers Association, Chicago.

Stabilization of the construction industries is a matter that is being considered in the building trades at the present time, to the end that those engaged in it may be employed continuously. Lumbermen can aid materially to achieve this much to be desired result by working together in an effort to see that lumber production continues on an even basis throughout the year.

Any effort along these lines, however, in the construction industry will be useless unless labor is willing to do its part to prevent the wages paid reaching a point where construction of necessity slows down on account of the increased cost.

To-day, I believe, we are in a position where the tendency to materially increase prices of material entering into construction, as well as the very rapid increase of wages is going to have the effect of sooner or later curtailing, not only the construction industries but general business. While the reaction will certainly not be as serious as it was in 1920, the fact remains if prices continue to advance we cannot look for anything but a sudden reaction sometime during the present year. This is to be avoided if at all possible, but can only be accomplished through active co-operation of everyone, having in mind a sincere effort to stabilize conditions, not only in the cost of raw materials, but also in the wages paid in the building industry.

### How "Buddie" Got His Sled and Mitts

A pleasing yet touching incident was referred to the other evening at the regular monthly meeting of the Wholesale Lumber Dealers' Association, Inc., at the Albany Club, Toronto. The human interest event revealed how widely the name of a firm is broadcasted through advertising and demonstrates the faith and vision of a child living over a thousand miles distant.

The other morning Frank Kent, president of the Seaman, Kent Co., Toronto, while opening his mail, pulled out a piece of brown paper, covered completely in a bold, juvenile hand. His attention was at once arrested to the characteristic note which came from a girl away down in Cape Breton. He was impressed by its candor and trustful spirit and promptly sent the child a remittance in order to buy her little brother a pair of warm mitts and a coasting sled.

The letter from Gracie McLean, West Bay, Cape Breton, under date of January 17th, reads:—

dear Seaman Kent Company

I saw lots of talk about your pretty hardwood flooring the paper said you were the biggest firm of hardwood flooring in the world. I thing you must be an awful rich firm I just thought I would send you my pin cushion I made it I thought som gentleman would take it from me and would give me little money for I want to get my little brother a coasting sled and a pair of warm mittens but I can't get him this altho he wants them bad. I am too poor to get this for him my parents are both dead. Altho I made this cushion there is no nice gentleman here in the country but old fashion fishermen they don't care to have a cushion to hold their tie pins please excuse me for bothering you dear Seaman Kent Co. I was thinking because your firm was so big that some gentleman would like my cushion. With best wishes,

Gracie McLean.

A post office order for \$5.00 was sent by the Seaman, Kent Co. who asked young Miss McLean for a photograph of herself and her brother. The letter also complimented Gracie upon her nice handiwork and industry as revealed in the pincushion, and added that the people in Ontario had to work just as hard as the fisherfolk in Cape Breton. The firm enquired if Gracie had any other brothers and sisters and invited her to write again in the near future, telling more about those near and dear to her.

Gracie's reply was as follows:—

Feb. 10, 1923.

dear Mr. F. Kent Co.

I got your letter some time ago wth the 5 dollars which I was awful glad to get I should have answered your letter to thank you so much for all that money but the road here in the country was very bad with snow banks that the mail driver could not go with the mail for a week. dear Mr. Kent I am so sorry that I have no photo of myself or little brother. We never did because there is no photographer here in the country we would have to go on a train to have them taken. we will try to go somewhere to have ones taken next summer and send to you its so hard to go anywhere with the snow now.

With many many thanks for the money and the best of wishes to you.

Gracie McLean,  
West Bay, C.B.

### Live Wire in the Central District

J. H. Rodgers, of the Ball Planing Mill Co., Limited, Barrie, Ont., was recently chosen as a director of the Ontario Retail Lumber Dealers' Association for the Central District. A live wire in the business he takes much interest in the progress of any movement with which he is associated. Mr. Rodgers is secretary-treasurer of the Ball Planing Mill Co., which position he has occupied for the last three years. This organization is one of the oldest in Ontario, having been established between sixty and seventy years. The founder, George Ball, is still living although ninety years old.

Twenty-five years ago the industry was taken over by J. D. Rodgers, father of the subject of this reference, and William Gallely, and the company was incorporated in 1910. J. H. Rodgers attended the public school and collegiate institute in Barrie and during that time was naturally more or less interested in his father's business. Seven years ago he came to Toronto and was employed by the R. Laidlaw Lumber Company, first in their West Toronto yard and later in their Spadina yard office. Late in the fall of 1916 he enlisted for overseas service and spent eleven months in France with the P.P.C.L.I. and was later with the 3rd Canadian Machine Gun Battalion. He was severely shell-shocked in September 1918 and was invalided home. During his convalescence he took a course in vocational training at the University and also special studies in plan-reading and estimating which have proved most valuable in connection with his work at the Ball Planing Mill Co., Barrie.

J. H. Rodgers, Barrie, Ont.

# You'll Never Make a Lumberman Smithie —Bushwhacking in Australia—

By A. de H. Smith, Edmonton, Alta.

At one period of a somewhat variegated career I found myself stranded in an agricultural community on the north coast of New South Wales, Australia, where dairy farming was suitably blended with lumbering, and where an enterprising young chap might draw a weekly stipend equivalent to \$2.50, provided he could milk cows, swing a lusty axe, and drive fourteen span of bullocks. Being embarrassed financially I hired out as a combination lumberjack-dairyman to a local timber magnate and proceeded to work for a living. This latter consisted in rising at 3.30 a.m., chasing sundry cows over the rocks and through the bush to the yards, where, until about 8.30 a.m. dairying was in vogue, then to the house for breakfast, following which the day's work commenced.

Each settler possessed a little clearing in the bush where the accursed cows fed, such time as they were not being milked; the surrounding area consisted of a tropical growth of timber which had of necessity to be felled to give agriculture elbow room, and after breakfast and until 4.30 p.m. when it was once more time to attend to the bovines, axe and cross cut saw rang.

## Thick Nature of Timber Growth

The big sticks consisted entirely of several varieties of the Australian gum—so hard that the axe would bounce out of the cut; the trees would on an average measure from six to ten feet in diameter, while they ran to a height which the B.C. coastal timber does not excel. But there were other things in the Australian bush besides the gum trees. Between them flourished a minor growth of palms, next came various shrubs and bushes, followed by creepers, vines, and "lawer plants," the latter being aptly named because of the hook like thorns with which they were armed and in which enmeshed it was almost impossible to obtain relief without assistance.

So thick was the growth that even the wild cattle could not force a passage through the mass, and with the thermometer registering as high as 120 degrees in the shade, the heat in that airless jungle can be imagined. Not once but twice did I sign for the clean, sweet spruce bush of the north!

Other things there were also; snakes of every conceivable shape, size and color, centipedes, stinging spiders, bellicose "soldier" ants nearly an inch long, which would promptly make for any noise and attack the source of it, while, from the foliage overhead, dropped a procession of black leeches which filtered into ones clothes and were discovered at night fat and bloated but still firmly attached to their "meal ticket." Act one revealed the dairyman-lumberjack and his assistant, clad in nothing but duck pants, a gauze undershirt, boots and felt hat engaged in rounding up the patient oxen (or bullocks as they are known in Australia). We had fourteen head on this particular farm, and every ox knew to a beautiful exactitude his place. When ordered to hitch up they took up their positions and presently the yokes were fitted, a chain running from the leader through each yoke and so to the wagon, where the "wheelers" held up the massive tongue.

## Armed With Great Long Whip

The animals were driven by a man on horseback, who armed with a whip carrying an eight foot stock and sixteen foot lash, rode up and down the line of toiling beasts, drawing blood at every cut, did he desire to do so. Down and up through the roughest of rough trails the lumber wagon creaked, and it was miraculous that none of the oxen suffered cracked necks when rounding sudden curves in the road or turning trees. They were trained to perfection, however, and each section in rounding an obstruction kept off the point instead of turning sharply so that by the time the "wheelers" reached the corner there was clearance for them.

By aid of the aforementioned whip a knowing pony, who needed but knee pressure to guide him, and a flow of "language" which might well fill any Canadian head fuller with envy, the fourteen head of clumsy but clever beasts wound in and out through the woods. When the driver with a sudden burst of wrath roared "Tiger, One Eye, Snowy, Sailor" those singled out for notice immediately arched their backs and put out every ounce of energy in them to avoid the dreaded whip. By some mysterious intelligence, usually not credited to the bovine kind, the Australian ox, at least, knows his name, and "Tiger" lazing along with the whites of his eyes showing, when addressed answered and answered promptly.

## Investigating All Parts of the Log

Arrived at the chosen location the oxen were unhitched and allowed to wander around, while the tree picked was investigated. First any dead and hollow logs in the vicinity were hammered with the flat of the axe to determine whether they contained any death adders or not. Much noise was indulged in with the idea of giving sundry snakes due and sufficient warning. The small growth around the tree was carefully cleared as a bright look out was kept for "soldier" ants, scorpions and other etceteras. Then the lumberjacks would peel their shirts and pants to the ankles and rid one another of such leeches as were indulging in breakfast, while ticks engaged in getting their heads under the skin were treated to a dose of kerosene, carried in a bottle for the purpose, and the boss then said "Guess we'd better get to work; can't stand around here all day amusin' ourselves."

In falling the "driving system" was used. This consisted of selecting a large tree and aiming it at a number of lesser ones which stood in the path of its descent. The larger specimen from which the mill logs were taken thus helped to clear the bush for farming, this being the favorite method used by the Australian settlers in the district mentioned. Once sawn into lengths—a ticklish proceeding when, it is remembered, that the sawyers back was to the nearby infested bush—one log at a time was snaked out to the road by the united force of the bulls plus a steel cable, loaded on the wagon with skids, and so away to the mill.

## Net Results of the Day's Work

Though we worked hard, and consumed on an average I should imagine about ten gallons of water per hour, one, twenty or twenty-four foot log represented the day's work, as it was necessary to return to the farm in time to "git them cows in," and the mill was a considerable distance from the logging site. Arrived at the farm, the oxen were turned loose to look after themselves, the workers partook of one of the numerous meals, for as Kipling says the "native born is a five meal, meat fed man"—and they need it! There followed some further recreation in the shape of each man milking between 25 and 30 cows, and so home to bed.

The Sabbath was strictly a day of rest. With the exception of about eight hours milking, nothing was done, so the hirelings usually spent the leisure time in cleaning their milk and perspiration caked clothing. There was little or no water, however—certainly none for washing clothes. The procedure, therefore, was to take the garments to a nearby gully which contained more or less liquid mud in which the clothing was stamped with the feet. Later the mud was allowed to dry and pounded off on the rocks.

I remained at my employment as a dairyman-lumberjack until such time as I had the exact minimum steamer fare to carry me to other fields of endeavor, my erstwhile boss' good natured parting salutation being "You'll never make a bushman, Smithie, the best thing you can do is to part your hair in the middle and get yourself a job in a office." I did.

### Quebec Retailers Want New Lien Law

At a meeting of the Montreal Retail Lumbermen's Association held on February 21st at the Queen's Hotel, J. F. Dupuis presiding, the question of the Quebec Lien Law was discussed. The members are of the opinion that the law does not sufficiently protect their interests, that it exposes them to risks which are unfair in the way of supplying materials, and that steps should be taken by the Association to obtain amendments which will give fuller protection.

The members also discussed the relations between wholesalers and retailers, especially in connection with sales to consumers by wholesalers. The discussion arose out of a letter from the Montreal Wholesalers' Association on the subject of proposals which are being considered by the wholesale and retail Associations. This letter was referred to a committee. It may be mentioned that the speakers referred with satisfaction to the fact that both Associations are getting together in order to settle questions in a way which it was hoped would be mutually satisfactory.

J. A. Laferte, J. P. Dupuis and R. Prefontaine have been elected members of the Mines and Forests Committee of the Montreal Chambre de Commerce.

### Montreal Retailers Hear Something on Insurance

Mr. Dupuis stated that he had received a letter from E. D. Hardy & Co., insurance brokers, Ottawa. The following is an extract from Mr. Hardy's letter:—In the last issue of the "Canada Lumberman" I was interested in noting your remarks on the advantages of an Association for the retail lumbermen of Montreal. As insurance is one of the first questions that may come up for consideration after your Association is organized, I thought you might be interested in a brief review of the present situation. Owing to the depreciation in the values since the war and the general business depression, the insurance companies have found themselves faced with a diminishing premium income and an increasingly high loss ratio.

While the experience on retail lumber yards would probably show more satisfactory results, the following figures furnished by the licensed companies to the Dominion Insurance Department show that the results on the larger manufacturing plants have not been altogether satisfactory.

Class	Premium	Losses	Ratio
Woodworking factories	837,344	420,142	50.18
Sawmills	1,108,869	629,641	56.78
Lumber yards	1,946,036	1,899,788	97.62

With the exception of the inter-insurance organizations, licensed by the Federal Government, specializing on insurance on lumber plants, these figures reflect only the experience of the stock companies holding Dominion licenses. It is not fair to assume therefore that the experience of all the companies specializing in this class of insurance has shown correspondingly unsatisfactory results. As a matter of fact, we know that the experience of our own Canadian Exchange and the Lumber Mutuals has shown good results. The explanation of this lies in the fact that the lumber specializing companies are writing the cream of the business and are devoting more attention to inspection and fire prevention than the stock companies. Furthermore the close personal contact between the representatives of these companies and the assured is such as to secure the highest degree of co-operation.

Another fact which contributes to the success of the Mutuals and Reciprocals is the fact that the cost of management is only about one half of the cost of the acquisition of the business by the stock, which in the case of British Companies, had risen in 1921 to 41.60%. This means that for every dollar paid in premium, 41.6 is used in agents' commissions and home office expenses. In order to overcome the objection to unlicensed insurance we are considering an arrangement with the Lumber Mutuals under which we would issue the policy of the Canadian Lumbermen's Insurance Exchange and use the policies of the Lumber Mutuals only as re-insurance, allowing the assured practically the same results which they could obtain if the insurance were placed in a mutual company. Under this plan the policy holders would receive a dividend each year and at the same time would be laying the foundation for a larger organization than the present Canadian Exchange, which has already justified the wisdom of the lumbermen who were responsible for its inception.

The retail lumbermen of Ontario have already signified their interest in the subject and we are hoping that, at their next meeting, they will decide to take some further action in recognition of the service, protection and saving offered by the lumber specializing companies. If you feel that a similar opportunity to meet the members of your association would result to a mutual advantage we would be glad to speak to them on insurance at some future date.

### Widely Known Lumberman and Legislator

Robert B. Smith, M.L.A., for Sunbury, N. B., is widely known in the lumber arena. He is manager of the Valley Lumber Co., president of the St. John River Dredging Co., a director of the Smith Foundry Co. and the St. John Farm & Fruit Co.

Mr. Smith was born at Blissville, N. B., his parent being from the old colonies. Previous to entering upon his career in the New

R. B. Smith, M.L.A. Oromocto, N.B.

Brunswick Legislature, he was a member of the Sunbury County Common Council for several years.

Fraternally Mr. Smith is a member of the Masonic Order and also of the Orange order, which is eminently appropriate seeing that he was born on the 12th of July. In religion he is a Baptist and in politics a Liberal.

### Modern Idea of Competition

The old conception of competition was based on the belief that for every article sold is a fixed demand and that the more persons there are supplying that demand the less business there will be for each of them.

The modern conception of competition is that only the amount of money available for the purchase of all manner of things is fixed and that the prosperity of any industry depends on its success in diverting from other industries to itself the lion's share of the fixed amount of money that the buying public has to spend.

Under the old conception of competition dealers in the same line of business believed that they had to fight one another. Under the new conception we know that the competition to be feared is not that of other individuals in the same line of business as ourselves, but the competition of other industries.

The buying public has just so much money to spend each year, sometimes more sometimes less; but even in periods of business depression the total available is enormous. The prosperity of the individual members of any industry depends not on how much business they can pull away from one another, but on how much of this big sum spent by the purchasing public they can attract to their own.

### Easterners Much Interested in Forestry Work

The dire necessity for forest conservation and fire prevention in the Province of New Brunswick was set forth in no uncertain degree recently in different parts of the province by a visit of the private exhibition car of the Canadian Forestry Association. The car was placed in a convenient place and thousands of people visited it. The data on hand as well as the instructive talks on the subjects, given by Gerald Blythe, were of keen interest and should go a long way in educating the public along the lines desired. Perhaps one of the most important phases in the work undertaken by this Association is the talks illustrated by motion pictures, given to school children.

## Montreal Lumbermen Discuss Trade Relations

The relations between wholesalers and retailers was the chief subject discussed at a meeting of the Montreal Wholesale Lumber Dealers' Association on February 15th at the Mount Royal Hotel. J. S. Bock presided and reported the result of a conference held earlier in the day between committees of the wholesale and retail associations. The retailers, who propose to extend their activities outside the city, made certain proposals which, in their view, would eliminate what they consider the encroachment of the wholesalers on the retail trade. The practicability of these proposals was discussed from many angles, the wholesalers offering, subject to ratification by the members, another proposal. It was ultimately decided that the views of the retailers should be submitted to the meeting of the wholesalers to be held in the evening.

Mr. Bock outlined the proposals, and, after a full discussion, it was agreed that the retailers be requested to supply information which was deemed essential before any decision could be made.

It was decided to take steps to increase the membership. This now comprises a large percentage of the wholesalers, but it is desired to build up a still stronger organization.

A resolution in favor of the manufacturers absorbing the sales tax of 3% was passed, and it was agreed to ask the support of the Canadian Lumbermen's Association and the Toronto Wholesalers' Association in obtaining an amendment of the law to this effect.

## Successful Builders' Convention in Quebec

The Association of Canadian Building and Construction Industries held their annual convention recently for a full week in the Chateau Frontenac, Quebec. There were one hundred delegates present from all the central sections of Canada from the Atlantic to the Pacific, and the meetings were presided over by National President, J. B. Carswell, of Toronto. The delegates in attendance were all practical men of business and expert mathematical architects in their various lines of the building industry.

The building contractor, however, was in the majority, and the papers read on all matters in connection with the trade were replete with valuable technical information. Costs, seasonal construction and labor, as well as the scarcity of apprentices were subjects given the greatest attention. The discussions were remarkable for their lucid and concrete exposition of the situation and the problems, superinduced by the aftermath of the great war, which would have to be overcome. Building and with it lumber entered into the discussion, as well as other materials used in structural undertakings.

Besides the talks, delivered by the delegates, J. A. Schrybert, from the Dominion Bureau of Statistics, and Wm. R. Mattson, of the Babson Statistical Agency, Boston, Mass., delivered addresses, the former on the Industrial Census schedule and the latter with the aid of three charts reviewed the conditions of the world after the Napoleonic wars, the American revolution and the American Civil War, as well as the aftermath of the recent World War. He illustrated the past with the present to account for the world's disturbance and the time taken to get back to normal, and then confined his mathematical illustrations to the aftermath of the late world strife, dealing at some length with the trend of modern prices. He pointed out that prices had increased by fifty per cent over those of 1921, and that materials had shown a decided increase in the last six months of 1922. He predicted that values would keep climbing up to affect the building trade but there would be an improvement in this respect during the last six months of 1923. He cautioned the builders to be careful in the study of costs and the need of watching fluctuations in prices by changes in conditions, the shortage of raw material, production, etc. He sounded a warning against speculation and said the changing conditions would bring forth a new type of man, a technical man with new methods who would be essential to protect the building trade, to watch the prices of commodities and keep down costs, and to secure profits and this would be necessary for the next five years.

Discussing the question of the shortage of skilled labor, Mr. Schrybert referred to the small volume of immigration, both in the United States and Canada, due to Government restrictions, and gave for example that in 1913 506,000 skilled mechanics were landed in the United States in contrast with 1921, when only 21,000 skilled workmen emigrated from European countries due to the 3 per cent American Immigration law. As a consequence when the building boom commenced in 1920 it was found that there was a shortage of skilled mechanics in the building trade, which also affected Canada with greater effect, because Canadian bricklayers and plasterers were attracted by higher wages into the United States, and also became absorbed in the automobile building line. Mr. Schrybert, in concluding predicted that the building trade would be twenty-five per cent better in 1923 than it was in 1922.

At the close of the convention the most important resolution

adopted was in advocacy of seasonal employment, apprenticeship and immigration. It was agreed that time would not permit the study necessary to work out a programme for obtaining the results desired, and, therefore, it was decided that the executive establish a Study Committee to consider the vital importance to the country of the shortage of building mechanics; and that the Dominion Government should be approached and encouraged for the purpose of holding a conference of all interests directly concerned; and that seasonal employment, bound up with the same question, should be dealt with at the same time; and that in addition to these questions we must have added immigration. If Canada is to expand and develop, it must throw open its gates to immigration.

The officers elected for the ensuing year were as follows:— President, Joseph M. Pigott, Hamilton; Past President, J. B. Carswell, Toronto; First Vice-President, James Mackie, Winnipeg; Second Vice-President, John V. Gray, Toronto; Hon. Secretary, John Grieve, Montreal; Hon. Treasurer, Fred McFarren, Toronto. Representative from General Contractors' Section, S. E. Dinsmore, Windsor; Representative from Trade Contractors' Section, R. Fitzsimmons, Hamilton; Representative from Manufacturers' and Supply Section, H. J. Mero, Walkerville.

It was unanimously decided to hold the next annual convention at Windsor. The convention was featured by a lunch party every one of the four days. The Mayor of Quebec and A. J. Welch, president of the Quebec Board of Trade, welcomed the delegates on the first day's luncheon. Hon. L. A. Taschereau, Premier of Quebec, and Hon. Mr. David, Provincial Secretary, addressed the visitors at the second and third day's noon-day gatherings around the festive board.

## Midland Firm is Getting Out Big Cut

The new firm of Letherby & Chew, Limited, of Midland, Ont., which was recently granted a charter, succeeds Chew Bros. The incorporation means that Ed. Letherby and Manley Chew, M.P. will conduct the business as an incorporated company instead of a part-

Ed. Letherby, Midland, Ont.

Manley Chew, M.P. Midland, Ont.

nership, as heretofore. There will be no change in the personnel or in the relationships of Mr. Letherby and Mr. Chew.

The firm's cut during the coming season will be approximately 50% more than in 1922. Mr. Letherby states that the prospects are that they will conduct bush operations to a sufficient extent in future to produce logs enough to stock fully their mill which is of modern construction and of ample capacity to take care of the production required from time to time.

## Will Operate in the Abitibi District

M. A. Grandbois, Engr., St. Casimir, Que., have sold the St. Casimir plant to the Laurentide Co., Limited, and they have bought limits and mills at Barraute, Abitibi, where they will resume operations early this spring. The company did not operate their mills last year as they wished to dispose of and ship over 4,000,000 feet from the 1921 cut which remained in stock. They succeeded in doing this and expect to turn out something like 2,000,000 feet of spruce and cypress this year along with 2,000,000 feet of lath and several thousand railway ties.

### Grave Danger in Boosting Prices

One of the greatest dangers facing the lumber trade at the present time is that of a runaway market. In spite of warnings and predictions against the peril—not to say disaster—of such a course, there are indications in certain quarters that the grasping spirit is still in evidence, and some interests have not profited by the experiences of the past.

To advance prices unduly and unjustifiably is a suicidal policy. It may have a temporary advantage but, in the long run, it works ruin and spells dismay, not only to the perpetrators themselves but to all interested in the welfare and stabilization of this great pioneer industry. Every speaker, every trade journal and every convention has taken a strong stand against any speculative spirit or fictitious flight in the price of lumber. It has been said that we always have the poor with us, and it might be observed, with equal truth, that we always have the plunger and the gambler. They can only see immediate results and will not gauge the future, caring little what it may bring. They give too literal and selfish an interpretation to the old adage that a bird in the hand is worth two in the bush, and are seeking to kill the one that lays the golden egg.

Just now when the lumber business is emerging from a long period of readjustment and liquidation and is gaining its feet and heading in the right direction towards a sound, firm basis, word comes from many quarters that certain holders of stock are demanding unprecedented prices. In some widths and thicknesses where a decided shortage has developed, increased quotations are altogether beyond reasonable bounds. This is a serious problem, particularly as stability in values and equalization of production and demand are being sought in the great forest products industry as never before.

Among those who have recently sounded a warning note is John T. Lloyd, president of the U.S. National Retail Lumber Dealers Association. He states that stabilization of the construction industries is a matter that is being considered in the building trades at the present juncture to the end that those engaged in it may be employed continuously. He then goes on to emphasize the fact that lumbermen can aid materially to achieve this much-to-be-desired result by working together in an effort to see that lumber continues on an even basis throughout the year.

If there is an unjustifiable enhancement in values there is sure to be a setback to great building activity and the revival of industrial operations. Much can be done to avoid such a state of affairs by taking a calm, dispassionate view of the situation as no one wants to see a reaction such as followed the boom of 1920. The results have been felt for many months and the boom terminated in a prolonged boomerang. This should be avoided if at all possible, and if

prices continue to advance, no one can look for anything but a sudden reaction some time during 1923. This can and should be avoided. Active co-operation, it is pointed out, will accomplish much if everyone will seek to do his part, having in mind a sincere effort to stabilize conditions, not only in the cost of raw materials, but also in the wages paid in the building industry.

At the recent annual gathering of the Canadian Lumbermen's Association in Montreal all the speakers were a unit in declaring against a repetition of 1920 conditions and setting forth the menace of runaway values and abnormal sales. A warning signal was hoisted by all the leading representatives of the business who emphasized the fact that the aftermath of a period of inflated prices was too drastic and prolonged. A good, fair profit is all that any upright operator or distributor asks, while every effort should be put forth on the part of those connected with the industry for the exercise of greater economies, more efficient operation and better results in service and distribution.

It is interesting to note that Babson, in one of his comprehensive reviews of the lumber situation under a recent date, takes a hopeful view of the future, but reading between the lines it will be noted that he foresees dangers not a few if co-operation and sincere effort are not put forth to steady conditions. Babson's summary is as follows:—Clients who are planning building this spring will do well to let contracts during the next few weeks. It is true that building materials are still high. Nevertheless, a large amount of new work is being planned, and it is doubtful if any better prices can be expected before the latter part of 1923. When the rush begins in April and May, prices are likely to be somewhat higher than at present. Moreover, contractors will have more work on their hands and will be less inclined to make terms. Eventually building costs will be very much lower than they are today. Within the next three to five years we should expect to see a reduction of at least 30% under present prices. Building, however, which must be started this spring should be contracted for without delay.

### Growing Shortage of Skilled Workmen

One of the live topics which came up for consideration at the recent convention of the O.R.L.D.A. in Windsor, Ont., was the lack of apprentices in the wood-working industry at the present day. The discussion aroused general interest and many timely and terse observations were made with respect to the trend of youth in this generation.

The views of representative woodworking and retail lumber exponents were that the bosses were as much to blame for the existent state of affairs as the boys. Many employers will not encourage a youth or take a personal interest in his welfare and progress. As long as there is a surplus of skilled adult labor in the trade they say that they cannot be bothered teaching or training lads in their teens. This is a short-sighted policy for, unless more apprentices come forward with in the next decade there will be no one left in the wood-working arena except old men and the industry is bound to suffer severely, particularly during busy periods. It was pointed out by one speaker that better wages should be paid apprentices and their standard should be raised.

There is no doubt that practical experience in the wood-working plants supplemented by a few hours instructions either by day or night at a Technical School, is an ideal combination which develops the ambition and spirit of any worth-while boy. When he feels that others are evincing some concern in him personally and are ready to act on his behalf, he naturally is appreciative and readily responsive.

The old problem of training apprentices has been before many trade conventions of late and one of the most effective and cogent utterances relating to it has been broadcasted by the National Lumber and Mfg. Co., Hoquiam, Washington. This firm has delved deeply into the question and presents a comprehensive review and summary of the entire situation in the subjoined open letter.

"Attention is being called to the growing shortage of skilled workmen in wood—a shortage of men who can secure the best results possible in turning a piece of rough wood into some useful thing of art and beauty.

"The school is the proper place to excite the enthusiasm and awaken the interest of the coming man—to create in his mind the desire to plane, to saw, to fashion, to work in wood. Our present day system of education is faulty. The ignobility, the disgrace of soiled hands and the workmen's suit, is being more and more instilled in the minds of the boys and girls, not only in the schools, but in the homes where education first starts; and this influence is manifested in the schools. This is as true of the country schools and homes as of the towns and cities. Work, common labor, is a thing debased, and yet, no real success in life has come without work and ceaseless effort.

"The mothers of the nation are naturally ambitious for their children and in countless homes the "Old Man" is held up as an example of what not to be. Poor dad, plodding, hard working, seemingly unambitious, frugal, self-effacing and unselfish, his thoughts, his dreams for the ones dependent upon his efforts, his heart-aches, his disappointments smothered under a veil of silence and blank expression, a victim of the deadly, daily grind, understood by few, misunderstood by many, he steadily "carries on."

"Mother, with the nesting instinct and the desire for the betterment of her off-spring, has the clearer perspective. With her it is a constant fight to keep up appearances, to keep the home fires burning; while welcoming the weekly pay check as a meal ticket, she has the idea that hard work 'doesn't get you much.' She preaches thus and points out the more fortunate as model lives to study and to pattern after. She is preaching and breeding divine discontent and this spirit, this feeling of unrest and ambition, has made the country what it is today and will drive it on to greater things.

"Our present method of education is too sugar-coated, too much like a Mother Hubbard that covers a great deal without touching on anything in particular—a lack of specialization and thoroughness.

"Walk into some of the large cities and talk to the radicals that seek to overthrow our present form of government—to Russianize our institutions—and you will find that a large percentage of the leaders are high school graduates or have gone farther and passed a year or more in some university or college. They have a smattering of knowledge, but are unfitted for any work, through their state of mind and their distaste for concentration and work.

"The people cry out against the influx of the uneducated foreigner; but the reds are not led by "Skis" but by men with good old American, English, Irish and Swedish names. Dig deeper and you will find that their fathers were the hard-working men that made our country possible; who toiled and saved to educate their boys and give them advantages that they themselves craved for.

"There is more danger to our nation through the class we picture than from the right kind of immigrants who have been taught to labor and to save. The latter have constructive ideas, the former destructive, and we need to stress more those studies in our schools that tend to inspire constructive thought, concentrated thinking, and definite results. And, what is better than working in wood? Educating the eye, the mind, the imagination, and the hand, the mental picture and its working out; bringing into play all of the best of man. And a man so grounded in fundamentals will never be a victim of the impossible dreamer.

"It is up to the men in the lumber business to arouse interest in this question and to make it possible for the boy to secure the wood that he needs in his practice and work.

"Put the question to yourself and to your men. If a boy came in your yard or factory today inquiring for certain pieces of wood with which to fashion something that was in his mind, would you make it easy for him to secure it; or, would you bark at him and send him away discouraged and disheartened?

"Thousands of embryo woodworkers have been driven into other fields by the thoughtlessness of lumbermen who could not be bothered with such trivial sales. So, let us decide to turn over a new leaf and encourage the effort of the boy or person who has a desire to play or work in the cutting up of wood, and to add our voice and influence in seeing that in every school opportunities will exist to work in things that will be of value in later life."

### Don't Be Afraid of Your Competitor

To make a lumber yard as profitable as it should be the money invested should be kept moving and earning something all the time, and the difference between this and the manner it is usually handled in the average lumber yard is a loss in the profits, and in some cases there is no profit at all if the costs were correctly figured, writes C. H. Ketrige, of Evanston, Ill., in the "Mississippi Valley Lumberman."

All of this you have had brought to your notice over and over again and still most of you are going on in the old rut of customary doing. I have reason to know this is so because every "Man-Jack" of a dealer I talk with has the same old complaints to make about the same old troubles in the business. The majority knows better what to do to remedy these things but somehow they don't seem to have the guts to act independently in following a course of action

they know is the right thing to do. They all have reasons for not breaking the continuity of custom, which when boiled down, amounts to little more than excuses. The principal one they pass-the-buck on is that of competitors. One dealer is inclined to make a change but is restrained from doing so through fear that his competitor will continue on in the old way that the public is accustomed to, for the matter of giving credits is a large factor in the game of competition.

I have sometimes thought that the paramount difficulty in the business is that of unbusiness like competition between dealers in the same town. Generally speaking they are afraid of each other and jealous of one who displays more ability to get the business. This feeling is responsible for the unnecessary price cutting that prevails in many towns. Hardly any man will admit that the other fellow is a better business man than he is, and he gives the public a false estimate of his business powers when he cuts prices to make a showing to make people think he is a live wire as a trade getter.

The gist of all this in most of such cases lies in the ignorance of true business principles and knowledge of how to do business. A good deal has been said about educating the farmers when the fact is there is relatively about as much of this kind of ignorance existing those running the retail yards. One thing is sure the farmer is more independent in his business ways than is the general run of lumber dealers.

There has been a tremendous amount of time, money and effort spent in holding conventions to educate the retailers in the right methods of doing business. Over thirty years have been spent on this line of endeavor. An advance has been made to be sure; probably greater than we realize, but it must be admitted that in many ways the dealers are still wearing their old clothes. I don't suppose this particular trouble ever will be removed; but I do believe that more can, and will be done toward mitigating this trouble with competitors and also of raising the standard of a better knowledge of how to do business, through the medium of the local and district organizations when in the frequent meetings competitors will associate personally and learn from each other. If rightly directed, these meetings can be made schools of instruction in the vital things affecting the carrying on of the business. Moreover, it will engender a better feeling that will naturally co-operate in making desired changes from the old customs. Of course, this is all going to take time, for educational processes are slow. But these organizations are a real start, and, I believe, the only way that this principal trouble spoken of can be materially reduced. With this effect a number of the other troubles will become less and less harmful to the business.

When two dealers in a town are both equipped with ability and understanding of how business should be done and the disposition to co-operate in so doing, the old time competition is changed to that of the spirit of emulation in serving the public whose servants they are, and when this unit situation becomes general, many of the now vexing problems will be solved and the retail lumber business will be on a higher plane of efficiency and success than it ever has been. The prime factor for bringing this to fruition is the grouping together of the retailers in these district associations for mutual conference.

### For Trees Are Friends, Indeed

I like a man who likes a tree,  
And want no better company,  
For such a man I always find  
Is just the very sort and kind  
Who's not content unless it be  
He too can grow much like a tree.  
I like a man who likes a tree  
No further introduction he  
Will ever need to win my heart;  
To me he is the counterpart  
Of usefulness and comfort, too,  
And does the good few others do.  
I like a man who likes a tree,  
He's so much more of a man to me;  
For when he sees its blessings there,  
In some way, too, he wants to share  
Whatever gifts his own may be  
In helping others, like a tree.  
For trees you know are friends indeed,  
They satisfy such human need;  
In summer shade, in winter fire,  
With flower and fruit meet all desire.  
And if a friend to man you'd be,  
You must befriend him like a tree.

—Charles A. Heath in Nuggets.

## Rich Return From Quebec Timber Lands

In the course of a brief treatise on the "Timber Lands and Water Powers of Quebec in Relation to the Pulp and Paper Industry. Mr. R. O. Swezey, of Montreal, says that the investments in this connection are well over \$100,000,000 in that province, exclusive of timber limits. The present daily production of about three thousand tons of pulp and paper is earning for the mill owners at the rate of over \$20,000,000 per annum. But it would be wrong to attribute this earning power to operating conditions alone, for it should be observed that a large part of any profits of Quebec mills is due to cheap pulpwood supplies. Hence, these profits are in reality largely represented by enhanced value of standing pulpwood, the marketability of which is facilitated by reason of mills and waterpowers being in proximity to the forest. "Just what the effect on the pulp and paper industry will be if its expansion continues in Eastern Canada," says Mr. Swezey, "is a question frequently asked. Occasionally there is some apprehension expressed regarding over-production. But to those familiar with the industry at large, and who know the importance of ample cheap power and pulpwood, who have seen the diminishing and vanishing supplies of raw material in the United States, and who know something of the rate at which consumption of pulp and paper products is increasing, the problem is not so much one of over-production as it is one of where the properly balanced supply of cheap power and wood are to be obtained to meet the demand of the future. That the newsprint industry has come through one of the worst trade depressions in history with but a temporary and minor retarding of progress, is ample evidence of the strength and soundness of that branch of the industry."

## Contracts are Awarded for Piling

Tenders for lumber and piling for the bridges that will be built during the coming year by the Alberta provincial government have been awarded by Hon. Alex. Ross and for the most part Alberta firms have received the contracts. For some of the large timber Edmonton men could not give estimates as the supply was not available and this goes to Hallock & Son, of Princeton, B. C., and the Pointer Co., of Vancouver. Mr. Ross expects that they will be able to work out their construction of bridges cheaper on the basis of Alberta timbers, but the chief object was that all possible work should be given out inside the province to give employment.

## Pays Dearly for Cutting Spruce Saplings

Thirteen spruce saplings, which formed a hedge between the premises of C. H. Houson and Charles Austin at Chatham, gave rise to a suit which engaged the attention of three lawyers, and which came for trial before Mr. Justice Mowat, Toronto. The trees were cut down while Mr. Houson was absent in New York.

"Incensed," says Mr. Justice Mowat, "by what he thought to be an unneighborly act, he began suit which developed into a lively and well fought trial. Plaintiff also makes out some case for exemplary damages in that the trees were cut down furtively.

His Lordship fixes the exemplary damages at \$25 and allows Mr. Houson \$500 for the actual damage, or \$525 in all, with costs.

## Progressive Lumber Firm Entertains Staff

The Myers-Warren Lumber Company, Limited, recently entertained their employees at their first annual banquet, held in Hunt's banquet hall, Toronto, about seventy being present. After all had enjoyed to the full the splendid repast, the rest of the evening was spent in a real, sociable get-together spirit with Mr. Fred. Perrin as entertainer and Mr. Crawford Butler at the piano, they being the only outside talent present.

After a few selections of community singing and Mr. Perrin had obliged the gathering with some songs and chatter, the President, Mr. W. J. Myers, was called upon and answered the summons fittingly assuring the employees that it was his keenest desire to have all feel that the firm took a deep interest in each and everyone.

After Mr. Oldham had favored the audience with a solo "Sweet Rosie O'Grady" and Mr. Bedford's contributed "Sweet Genevieve." Mr. W. Warren gave an interesting talk on the short but encouraging history of the company formerly known as "The Myers Lumber Company, Limited" and now as "The Myers-Warren Lumber Company, Limited." He confirmed the presidents remarks regarding the kindly feeling they wished to extend to each and everyone of the employees and assured them that they would be rewarded 100 per cent according to their individual efforts. He reminded them that Mr. W. J. Myers and he are the sole shareholders in the company. Mr. Warren then spoke of the large volume of business they had enjoyed during the past year and assured the men that the firm

was now in a much better position to handle more business and that more efficiently.

Mr. Fred. Stickells then moved a vote of thanks to the company for the interest they had taken in their employees in providing such a splendid event and assured them that every one would certainly double his efforts during the coming season. This was seconded by Mr. K. Brown and affirmed by all in the usual manner.

Other volunteers in the way of songs, stories, etc., were Messrs. Sayers, Bowen, Churcher, McDonald, Vigers and Scully. Mr. Wm. Storey gave a recitation entitled "The Railroadman's Dream."

After Mr. Perrin had again favored the audience, the boys sang several selections of oldtime melodies.

## Fined for Having Unsanitary Camp

C. W. Cox, timber contractor, Port Arthur, Ont., was fined \$30 and costs by Police Magistrate Palling at Fort William recently for failing to carry out rules and regulations as set forth by the Provincial Board of Health in connection with sanitary arrangements in lumber camps. Information against Mr. Cox was laid by W. C. Millar, Provincial Sanitary Inspector in this district. Mr. Millar said that Mr. Cox's camp in the vicinity of Silver Mountain was visited by him on a number of occasions and on the last visit, early this month, he was accompanied by Dr. Caldwell. Complaint was made that the camp was ill-ventilated and that there was not the required amount of cubic feet space for each workman. Mr. Cox said the camp was only a temporary one and, when visited by the Inspector, housed, in addition to a number of teamsters, a large number of transients. Magistrate Palling remarked that he was privileged to inflict a penalty of \$500 and costs but as it was the first case of its kind taken into his court he would content himself with fining the nominal sum of \$30 and costs.

## Rotarian Speaks on Line Lumber Yards

"The retail lumber business as it is conducted in Western Canada was outlined in detail before the members of the Edmonton Rotary club at the regular meeting recently by Rotarian Ross McMillan, who has been engaged in that business in Edmonton, Alta., for some time. In his address Mr. McMillan dealt briefly with the history of the industry and some of the present-day methods of distribution.

In Western Canada, the speaker said, the line lumber yards were in vogue more than the privately owned yards. Some companies had as many as a hundred or more yards which were all handled through one main office. In Eastern Canada the individual owned yards were still common.

## Big Sale of Quebec Forest Lands

The sale by auction of permits to cut timber on a block of forest land situated in the basin of the Manicouagan River and the Outardes River, on the north shore, covering an area of over 2,000 square miles, took place recently in Quebec.

Three groups of competing companies each deposited a few days ago the sum of \$150,000. These firms were: The Ontario Paper Company, of Thorold, Ont., believed to be acting on behalf of the Chicago Tribune Publishing Company; the Gulf Pulp and Paper Company, which operates its mills in Clarke City, and in which Lord Rothermere, brother of the late Lord Northcliffe, is interested, and the Industrial Development and Service Corporation, which was recently organized.

The limits comprise a series of forest reserves of spruce and fir trees, which have only been slightly affected by forest fires. They are located some 60 miles from the mouth of Manicouagan River, but are said to offer, however, great facilities for exploitation.

The Ontario Pulp and Paper Company was the successful bidder, after 63 different bids on the amount to be paid over and above the stumpage dues. Bidding started from cents over the fixed rate of \$2.70 per thousand feet, and finally reached \$6.05.

## Michigan Lumber Camps Instal Radios

It is reported at Merrill, Wis., that nine lumber camps near Marquette, Mich., have disregarded the old "after work" habits of the lumber jack, and to-day the woodsmen listen to speeches and concerts that come into the wilderness over the camp radio. Every evening the men are entertained in this manner, and according to the officials of the lumber companies, the radio is not only entertaining but educational, as it keeps the woodsmen in touch with world affairs in a way which most of them can understand.

The officials in installing these radio outfits for the men have decided to fill in the evening hours with something that will make the lumber jack's camp life interesting, appealing and educational.

## What Canada's Timber Really Stands For

Warning Canada against the fate of Syria, Asia Minor and China which he described as "depleted and decadent lands inhabited by second-rate peoples," Robson Black, secretary of the Canadian Forestry Association, made a strong and urgent plea for forest conservation in an address before the Young Men's Canadian Club, Montreal, pointing the moral from countries like those described where all timber resources had been destroyed. In British Columbia alone he asserted that ten times more lumber had been burned than had gone into the mills of that province, and claiming that the whole Dominion was faced with the total destruction of its lumber, an asset in a rising market for which the whole world would soon be bidding. He said that within the last few years fire had destroyed enough trees to make a forest a mile and a half wide, the whole way from Vancouver to Halifax.

## Reduced Convention Rates to Pittsburgh

The National Wholesale Lumber Dealers Association announces that arrangements have been made for reduced rates, effective during the Annual Meeting at Pittsburgh, March 21-22. The Trustees of the National Association met at New York on January 30th, and convention plans were discussed, and members are assured of an interesting meeting and a discussion on important matters affecting the interest and welfare of the organization. The entertainment features will be liberal, including an attractive program rendered through the Pittsburgh Wholesale Lumber Dealers Association. The banquet will be held on Thursday evening, and as usual, both men and ladies will participate. Secretary Schupner states that numerous reservations have already been made at the William Penn Hotel, and he is urging members to provide for their hotel accommodations at the earliest possible moment.

## Broadcasting Shingles From Pacific Coast

There has been sent out from the office of the British Columbia Lumber Commissioner in Toronto 1,000 samples of British Columbia shingles, which consist of Royals, Perfections, XXX and XXX-XX. These have been forwarded to architects, builders and retail lumbermen. The samples are stained tile red, brown, moss and light green and have stickers affixed setting forth the proper exposures for roofs and side-walls, with cover capacity for various exposures, together with important directions for nailing. Accompanying each package was a new booklet which has been issued by the Forest Branch of the Department of Lands, entitled "How to Finish British Columbia Woods." The booklet is appropriately illustrated.

## Huge Cedar Tree Filled with Honey

In the virgin cedar swamp of Mr. P. Berranigan, on Alumette Island, near Alumette Rapids, Ont., another huge cedar tree has poured forth its accumulated riches of perhaps centuries.

This time it is a cache of wild honey lying in combs that measure two and three feet square. The son of Mr. L. G. Foster, whose shingle mill near Pembroke is devouring the product of this splendid swamp, preserved in a miraculous manner from the devastating fires of the centuries, says there are at least five hundred pounds of wild honey. Before precautions could be taken, exposure to the cold weather had frozen the huge colony of wild bees which year after year had colonized and stocked with honey the dead heart of the huge cedar.

## Greater Vigilance Needed in Fire Work

The annual report of the St. Maurice Forest Protective Association shows that the cost of fire-fighting during 1922 was very large, although it decreased substantially as compared with the previous year. F. I. Ritchie, of Three Rivers, Que., the president, states that the season was a disastrous one so far as fires were concerned. Existing conditions can be greatly improved by the Provincial Government amending the forest laws so that prosecutions made by the Association would insure offenders being severely dealt with. The educational campaign which has been carried on should be continued as it is by this means that co-operation between those operating the forests and the public is produced, which is so essential to effective forest protection. The system of clocks installed during the past season in certain parts of the territory proved an efficient check on the rangers' patrol work and the directors purpose extending this system throughout the territory the next season. It is the intention of the directors to install several wireless telephone stations for the coming season, which will give a more efficient means of communication in the field.

H. Sorgius, the manager, in his report, states that the fire risk in the Association's territory is becoming greater every year on account of the fact that the logging operations are annually extending

further into the forests, necessitating the employees travelling over more forest areas. The area burnt over on land of members was 49% of total area burned in merchantable timber, 12% in young growth, 20% in cut over land and 19% in old burn. The total number of fires was 238. It is suggested that the forest laws of Quebec be amended to that all males between the ages of 16 and 55 be obliged to help extinguish fire when so called upon by the fire ranger, without receiving any remuneration for services and that the meaning of the words "a reasonable excuse" be distinctly specified as in the New Brunswick laws.

## Pulp and Paper Exports Decrease

While Canadian pulp and paper exports for the nine months ended December 31 showed increases ranging from 40 to 50 per cent exports in December showed a decrease of \$1,176,580 compared to the corresponding periods in 1921, according to a report issued recently by the Canadian Pulp and Paper Association. In the nine months' period pulp exports increased nearly fifty per cent over the previous year, and newsprint exports increased over forty per cent, the total value being \$77,905,275 compared to \$88,320,722. Exports in December were valued at \$10,249,418.

## Good Thing is Retaliatory Tariff

The general effect of the retaliatory provisions of the tariff act invoked recently by the United States treasury against imports of pulpwood cut on crown lands of New Brunswick, imposing an import duty of one dollar per thousand feet on such imports until further notice, is expected to be of material benefit to the province in restricting the illegal export of pulpwood from crown lands in defiance of the pulpwood regulations of New Brunswick adopted in 1911. This was the opinion expressed here by crown land officials.

## Veteran Mill Superintendent is Honored

William Douglas, who for thirty-one years was associated with the firm of Gillies Bros., Limited, Braeside, Ont., was recently superannuated by them after a record that is almost unique in industrial organizations at the present time. The connection of Mr. Douglas with Gillies Bros., Limited, first began in 1866, he being the first man employed by Gillies & McLaren, then commencing their new mill operations at Carleton Place, working up from tail sawyer through positions as sawyer, filer, mill foreman to manager and remaining on in that position with that firm's successors, Peter McLaren, McLaren & Edwards, and Canada Lumber Company, till he came to Braeside in 1891 where his industry and integrity, his ability as a leader of men, his resourcefulness under difficulties, and his loyalty to the company's interests made him one of the main factors in the continued existence and progress of the firm. He was one of the stalwarts of the industry.

Mr. Douglas' successor is Mr. John Mills, who assumes the duties of manager and superintendent with general charge of mills, yards, booms, stores, stables, boarding houses, cottages, etc.

Recently there was a gathering of over one hundred people at Braeside for the purpose of recognizing the retirement of William Douglas from the superintendency of the mills.

J. S. Gillies introduced the event of the evening in an earnest appreciative address that was reminiscent of the beginning of lumbering in Lanark and Renfrew one hundred years ago under his grandfather, the late Mr. John Gillies of Gillies (now Hearn's) mills. The narrative of the primitive conditions was most interesting and was well interspersed with humorous anecdotes of experiences of those days. Mr. Gillies also dealt with some phases of the present condition of the lumber industry, which, with agricultural products, especially wheat, makes up the greater part of the export trade of Canada; he pointed out that there was a future in this business for young men who were willing to learn it from the bottom up, and that the industry is one that is not in a combine or trust and is not bolstered up by the government legislation.

D. A. Gillies followed in a neat and brief address appreciative of the services of Mr. Douglas, and then asked him to accept a gold watch on which was inscribed as follows: To William Douglas from Gillies Bros., Limited, in appreciation of 56 years of co-operation, 1866-1922.

Alex. de Renzy then spoke of the history of the village during the years Mr. Douglas had lived in it and of the interest Mr. Douglas had taken in its welfare. He concluded by presenting Mr. Douglas, on behalf of the officials and workingmen, with a smoking set and a gold headed cane, and the expression of the desire, as Messrs. Gillies had also done, that Mr. Douglas' life might be spared many years to

Mr. Douglas spoke of the co-operation that he had always sought to carry into effect and of the many years over which this had extended; he felt deeply his gratitude for these expressions of kindly remembrance.

## Should Stop Export of Christmas Trees

Editor, "Canada Lumberman":—

I wish to congratulate the Canadian Lumbermen's Association on the strong stand it has taken with regard to prohibiting the export of Christmas trees. These trees are the lumber supply of the future and there is no tree so poor or so small that it does not have an additional value as a protector of our water-sheds, springs and wells, which protection is becoming more necessary every day, but I would like to suggest to the Canadian Lumberman's Association that they also make the much more important request to our Government at Ottawa to prohibit the export of pulpwood, the export of which robs Canada of the enormous number of thirty-five million trees annually. Much of the pulpwood that is being exported to-day is very little larger than Christmas trees. I examined four thousand cords of black spruce pulpwood piled alongside the Transcontinental Railway, ready for shipment to the United States, that measured from one and a half inches up, with the largest stick measuring only four and one-half inches in diameter,—surely little better than Christmas trees.

Not only should the export of Christmas trees be prohibited but also cutting for home consumption as well, except under the direction of a Government forester and only where judicious and scientific thinning may be permissible. Otherwise the cutting of these small trees, as promiscuously practiced to-day, is nothing short of criminal waste.

Every one should raise his own Christmas tree. A seedling can be obtained at the Government Nurseries at Berthierville through the mail for a few cents. This can be planted in a small tub and set down in the ground till it becomes of sufficient size for use, when the tub can be dug around before the ground freezes all ready to lift out. Straw or litter can then be covered over the ground around the tree, which can be allowed to remain in the tub and hole till Christmas time, when the straw or covering can be removed and the tub containing the tree conveyed to the house, being careful to cover the hole so that after Christmas the tree can be placed back in the hole, carefully removing the tub before doing so, and covering up the earth again with straw when it will be ready to take root and grow in the spring. This method can be repeated from year to year, having trees of different sizes coming along. Any one not having a garden or back lot can always find someone who would be glad to give them planting space.

Community Christmas tree plantations could also be provided as there are always waste plots that could be used for this purpose that are now simply blots on the landscape. When the people once get the idea of planting Christmas trees they will not stop at one tree, and consequently not only will this slaughter of young trees be arrested but a tree-planting habit formed that will have far reaching effect.

FRANK J. D. BARNJUM.

## Is Manitoba Verging on Timber Famine?

Depletion of the forest areas of Manitoba through fires and other destructive agencies has been so great, that the province is actually confronted with a situation verging on a timber famine, was the opinion expressed by H. I. Stevenson, district forestry inspector at a recent meeting of the Manitoba Horticultural and Forestry association.

The speaker declared that prior to extensive settlement the province had been abundantly stocked with timber. Vast expanses of forest had been cleared away, the general belief being that the forests were inexhaustible. To prevent further destruction introduction of laws giving protection to remaining timber, he said was necessary. The future timber production of the province to a great degree depended upon the success of the present forest reserves.

Continuing Mr. Stevenson asserted that of the total land area of the province approximately 75,000,000 acres were suitable for the production of timber. It was estimated that there remained today only 2,000,000 acres, which was producing about 50,000,000 feet annually of raw material, valued at nearly \$1,000,000.

## Protect Forests By War Radios

It was shown by Major W. A. Steel, M.C., of the Royal Canadian Signalling Corps, Ottawa, in the course of an address to the Montreal Branch of the Engineering Institute of Canada, that the arts of aircraft and radio telegraphy and telephony as applied to war work could be utilized in peace time with surprising value and efficiency to defend our national resources against attacks by fire and other perils. Major Steel was lecturing on "The Employment of Radio Telegraphy and Telephony in Connection with Forest Fire Control," and in the course of his address he shows how men could

be trained for war service in this line while actually performing valuable service in the prevention of forest fires.

This phase of its work, he said, had been actively taken up by the Department of National Defence, with which the Militia Department was connected. In this way the war training in peace times was no longer a non-productive business but was productive of the greatest value to the national interests.

## Will Try to Educate Autoists

The State Department of Conservation hopes by a campaign of education to lessen the danger of forest fires resulting from lighted smoking materials being thrown from automobiles, Commissioner Wm. A. Baseley told the state fire wardens' conference recently in Boston.

"In 1922," he added, "a total area of 85,241 acres were burned over in Massachusetts, and forest fires resulted in the loss of five lives, the destruction of 122 buildings and damage of approximately \$500,000 besides the \$100,000 cost of extinguishing the fires. The number of fires along the railroads increased from 862 in 1921 to 1,511 in 1922."

## Country Must Not Waste Its Forests

Hon. Henry C. Wallace, United States Secretary of Agriculture, who was in Toronto recently, stated that the problems of agriculture across the border were much the same as in Canada. The greatest problem to work out at present was to get normal conditions and prices between agriculture and other things in order to go forward. Continuing, he said:—

"No—there is no 'back to the land' movement just now in the United States. Prices and wages paid for other kinds of labor are much higher, which, of course, does not tend to make people go in for farming. Yes, I would say there is almost a 'back from the land' tendency for this very reason."

He reiterated his assertion made before the Royal Canadian Institute, that the United States with its 110 millions population, even with more land under cultivation, would need all its own produce in the near future.

"We have made mistakes in our country wasting forests, etc. Canada might learn from our errors in that line, and develop a national forest policy," he said. Asked if he had any suggestions for Canada to make to the Legislature, Mr. Wallace disclaimed any thought of coming into another country and telling how it should be run.

## Forest Conservation Among School Children

Several hundred thousand Canadian school children will be well informed on the forest conservation problem of the Dominion as a result of a school essay competition for which the Canadian Forestry Association recently awarded provincial cash prizes. Sixty thousand copies of the competition prospectus were sent to teachers and inspectors and thousands of the schools were at once inspired to make their essays accurately reflect local conditions. The cash awards for the province of Ontario by the Canadian Forestry Association were as follows: 1st Prize—\$25.00 Mildred Giggon, Sundridge, Ont.; 2nd Prize—\$15.00 Helen Kelly, Form III, Convent of Mary Immaculate, Pembroke, Ont.; 3rd Prize—\$10.00 Marie Belanger, 157 Augusta St., Ottawa, Ont.

The idea of the competition was to stir the child's interest in forestry as a national cause, using local conditions as a starting point. For example, the child on the treeless prairie wrote on tree planting, the child in Central Quebec specialized on forest industries, forest employment, etc.

## Judgment Delivered in Lumber Action

It is claimed, that there is sufficient timber on the tracts at present held by The Pas Lumber Company, to last fifteen years, and when this is exhausted, other tracts are available in the district. The importance of the lumber industry to The Pas cannot be over estimated. It has been one of the prime factors in causing the town to grow from a small settlement, to a thriving town. The Pas Lumber Company, Ltd., have been generous in the matter of supplying free lumber for public buildings, and officials have always displayed a live interest in anything tending toward the welfare of the district. The greater portion of the product turned out at the present time at the mill is marketed in the United States, but when normal conditions return to the prairie provinces, no doubt more lumber will be disposed of in Canada.

Do not lose your head. Remember that prompt action the first few minutes counts more, many times, than afterward.

# Colonial Frame with Homey Appeal

FIRST FLOOR PLAN

SECOND FLOOR PLAN

A New England Colonial frame house that has a genuine homey appeal and that combines compactness with dignity and comfort, is shown in the accompanying drawings and illustrations. The house, one of the series being erected in New York City and vicinity in the home-building campaign being carried on under the direction of the Homeowners Service Institute was built at Teaneck, New Jersey.

The cost of this structure was \$6,745.78, including the 10 per cent margin of profit allowed the general contractor. The average cost per room was \$1,124.24. The cubical contents of the house were

There are three main rooms on the ground floor—living room, dining room and kitchen, with pantry. The second floor has three bed rooms, with tiled bath. The roof is of wood shingles, left unstained to weather.

Henry Atterbury Smith, architect and designer of model low rental housing enterprises for Mrs. Wm. K. Vanderbilt, Sr., and other wealthy New Yorkers, as chairman of the Building Plans Committee for the home-building campaign, describes the Colonial frame structure as "a perfect gem of a home." He declared that the erection of such a house at a cost of less than \$1,200 a room when mere cheapness of construction was not sought is quite an accomplishment at the present time. As was the case with the erection of other houses of the series, the best building materials were used.

Arthur J. Barzaghi, of New York, is the architect for the house. Complete detailed working drawings and specifications can be obtained upon application to the Homeowners' Service Institute, 37 West Thirty-ninth Street, New York, N.Y.

An outline of the specifications follows:

**Excavation and Masonry**—Excavated under entire house. Foundations and cellar walls of poured concrete, cement block or rubble stone. Interior of cellar walls and exposed

portions of exterior to be plastered and cement plastered.

Chimney of selected common brick with T.C. flue linings. Open fireplace of selected common or face brick, with ash dump, in living room. Porch floor of cement, marked off in squares, with brick borders. Walks of flagstone, brick or cement, at option of owner.

**Carpentry and Mill Work**—Framing timbers to be of sound white pine, spruce, hemlock or easily obtainable material of sizes shown on drawings.

Floors in dining room and living room to be of selected plain oak, with seven-strip border. All other floors to be of selected edge grained pine flooring.

Interior of all closets to be lined with aromatic red cedar.

**Metal Work**—All flashing, gutters, downspouts and leaders to be of copper.

**Tile Work**—Bathroom floor to be tiled and side walls to be tiled four feet, with cap moulding.

**Painting**—Entire exterior to have three coats of paint, colors at option of owner. All interior woodwork to receive two coats paint and finishing coat of enamel, well rubbed down.

**Hardware**—All finish hardware to be of cast bronze.

**Electric Work**—All wiring to be enclosed in BX cable, and in accordance with requirements of the National Board of Fire Underwriters.

**Plumbing**—Complete installation of a sanitary service system. Fixtures include flush side built-in bath tub, pedestal type of lavatory, syphon jet closet, built-in medicine closet, enamel iron sink and drainboard, two-tray laundry tubs, automatic instantaneous gas hot water heater and brass piping throughout the hot water system. A gas range if possible.

**Heating**—Approved one-pipe steam system, with a total of 250 feet of radiation.

# Country's Well Being is in its Wooded Wealth

*Correspondent says all Lumbering Should be Under Governmental Control and Drastic Regulations Should Govern Every Operation Entailing Falling of Trees.*

A treeless nation is a decadent nation.

When the forests of a country are neglected the mental and moral health of the inhabitants begin to decline.

Nations made treeless by the hand of man are dying nations. Nations which once were great and which no longer count are those the forests of which have been ruthlessly exterminated.

No matter what political cataclysm has overtaken and submerged peoples whose governments foster and care for forests, their potency remains, their vigor still endures, their racial resurrection is certain.

Take a map of the world and look upon the peoples who gradually are perishing. Those doomed lands are treeless. They are nations which, once mighty, have become negligible.

Neither in industry, nor in science, nor in art do they now contribute anything vitally constructive or creative. In the councils of world races—save for a feeble, peevish and purely selfish cry—they do not utter any sound. Theirs is the drowsy dream of glories past. Theirs is the sunset—golden still—that edges night, and the false, reflected light of night, and the unstirred silence of racial annihilation.

Once there were trees in Spain. Once China grew vast forests. So scepters pass.

Without trees there would be little, perhaps no human life on this planet. There would be little life at all, possibly none.

It is the leaf that enables us to eat and drink. Only through the laboratory of the living leaf is our nourishment prepared, directly or indirectly. The green leaf gives us oxygen for our lungs, and uses what carbon dioxide we expel. Our food is partly mineral. We should die for lack of it unless predigested for us by vegetation.

The living leaf prepares food for man and cooks it by sunshine.

Our food and raiment begin in the living leaf. The leaf enables us to drink. There would be little sweet water in the world—little rain—except for the sheltering leaves of trees.

Minerals in solution—elements made available by water—are the food of trees. From the mesh of tiny feeding roots, up through the soft sap-wood, and out into the leaves is carried this mineral food which nourishes trees. Each leaf is a delicate little chemical laboratory through which the circulatory system of the tree passes. Each leaf transforms the inorganic into the organic, digesting, preparing food for itself and for man. And through each leaf the tree breathes. If in any of us God has planted the vaguest love of and desire for beauty, then we ought to grow forests sufficient to satisfy that craving. For, in all nature, nothing nobler and lovelier was ever made by God than the virgin tree in its intact chastity and beauty.

## The Tree and What It Possesses

A tree is a living thing. It has no mind, yet, possibly it possesses something equivalent to intelligence. It has no nervous system, yet it is sensitive. It has no power of locomotion, yet it may advance or recoil.

All other attributes of life it possesses; it is born of the union of two sexes; it breathes, eats, drinks, digests, sleeps, grows. It is subject to illness and recovers with nursing. It survives wounds; its scars heal; antiseptic surgery can save it.

And, like all things living, it is mortal. What we call death is the physical finish of it, and of us.

It is not difficult for us to understand why our pioneer forefathers hated the forests which covered our country and turned it to a perpetual twilight.

Except where lakes or water-courses broke the vast continuity of trees, all was sunless shadowy silence.

No underbrush could grow in these dim forest aisles; the high, thick tapestry of foliage shut out all sunshine. Only on prairie, marshes, or along lakes and streams and seas, where the forests edged the sun, could any lesser vegetation take root and survive.

To live, our forefathers had to eat. To clear a little place in the sun for a patch of corn was a herculean task. A sort of frontier fury was born in the minds of those whose starved struggle to eat was met everywhere by the huge, gloomy, solid ramparts of living forests—a vast, gigantic barrier to sunlight without which no fruits of earth are garnered.

Hatred for the forest was an evil heritage for us. Heed lest it

be not our national undoing. Where forests die, waters die. Where waters die, the fruits of the earth perish.

And out of those mutilated and abominable wastes where axe or fire or both have passed, unguided by knowledge or common sense, are born tornadoes that devastate and kill; floods that destroy fertility, harrow the shrinking earth to its rocky ribs, and turn arable land to desert.

Springs, once protected by the spongy mesh of roots and mosses, and narrow channels bordered by burning boulders bare as bleached dry up; rivulets disappear, brooks dwindle, rivers shrink into warm bones.

Rains bring rushes of flood water only—terrifying inundations that come in the twinkling of an eye, thunder by in devastating fury and are gone, leaving behind dead springs, dying streams, and the ghastly bones of withered rivers.

The forest hatred inherited from our pioneers has degenerated into the stupidity of apathy. And with it the land is degenerating, too.

## The Destroyers of the Forest

The people of the United States are not celebrated for their love of beauty. Any appeal to them on the ground that beauty is a necessity to the civilized would be listened to with the indifference born of ignorance. Forests are beautiful. Many agree; but will exterminate those same forests if a few dollars can be made out of the operation.

As Omar might have said: "What can their money buy that is more desirable than the forests they have sold to destruction?"

That isn't the point. The point is that the destroyers of forests have made a rotten bad bargain no matter what they get for the transaction.

The situation is comparable to a fruit-grower who picks a ton of luscious grapes from his vines. Fine! That's what the vines are for.

But consider the ass who would rip up vines, roots and all, whenever anybody comes to buy his grapes! The next year there would be no more grapes to sell.

Next decade or so there will be no more lumber to sell.

That's the story. It is the story of a similar creature known as The Great American Ass.

Three hundred years ago the forests and the fertility of America were supposed to be inexhaustible.

To-day vast tracts of once fertile soil are exhausted and can be bought for almost nothing. And three-fifths of the original timber of the United States has disappeared.

Today we are using lumber four times as rapidly as we are growing it. Once the uncut forests of our country covered 822,000,000 acres. One-sixth remains. All woodlands, even including cut-over and burned areas, amount to about half the original virgin area.

Of idle, fallow, unused, and stupidly neglected land suitable only for forest growth and once bearing trees, 81,000,000 acres have been so ruthlessly cut or burned that it has become a wretched, useless, unproductive waste.

Three-quarters of the forests of New England are exterminated. In a few years New England will import what lumber it requires. New York, today, produces less than one-tenth of the lumber it requires.

Pennsylvania is now obliged to import eighty per cent. of the lumber it uses.

The white pine of Michigan, Minnesota, Wisconsin, is nearly gone; the yellow pine is three-fourths gone from the South; in the Middle States the timber is practically exhausted; twenty years will end both the hard-wood forests of the Appalachian region, and those of the Mississippi.

In twenty years the cypress, too, is doomed to varnish.

What remains? The Pacific Coast timber. And in thirty years that, too, will disappear.

When the forests go, the waters go, the fish and game go, crops go, herds and flocks go, fertility departs. Then the age-old phantoms

appear, stealthily one after another—Flood, Drouth, Fire, Famine, Pestilence.

#### The Situation is not Reassuring

The picture painted here isn't a pretty one. Nor have the colors chosen been too lurid or too thickly laid on. Alas, they have even been toned down! It's a rotten situation.

There are two ways of facing a rotten situation; get under the bed-clothes and try to forget it; or get up, put on your pants, go out and face it.

Of course the thing to do is to cut out the rottenness from the situation and turn it into a hopeful and practical one.

There is time, still. We'll have to pay for our asinine ignorance and indifference—pay in hard cash. Every pocket will fell it; every pocket feels it now. It's going to cost us what Broadway calls "real money." That can't be helped. The Piper must be paid. The thing to do is to pay him, send him away, and get down to brass tacks.

Now, then, here is the problem and the necessity.

We ought to grow sufficient timber in this vast land of ours for our own needs.

We ought to grow enough for profitable export.

We ought to grow enough permanently to protect our springs, watercourses, rivers, our water power, our navigable streams, the fertility of our fields, the welfare of our herds and crops.

We ought to grow enough to protect the health of our people.

We ought to grow enough to protect our birds; for, without them, our crops ultimately would be destroyed.

We ought to grow enough to give shelter and expansion to our game birds and animals, to our fur-bearing animals, to our fish.

There is no reason why we should not use our timber and have it, too—take each year what we require from our forests, and still retain our living forests—stately, permanent, useful, beautiful forests, paying in a hundred charming ways for the room they take and care they require—yes, paying even, in money, and paying well as first-class, profitable investments.

The Government should assume control of all lumbering in the United States.

This proposition is radical and it sounds like interference with private business. But it must come to that or our country becomes

like China, a land of perpetual famine and poverty—like China which not very long ago could boast forests as magnificent as our own.

All lumbering should be under governmental control. The most drastic regulations should govern every operation which entails the felling of trees for whatever purpose.

For every tree felled in the United States a permit should be obtained. For every tree felled, another should be planted immediately.

Our hundreds and hundreds of thousands of waste acres—acres sterile, fallow, burnt over, cut over—which now yield nothing, should be planted to forests.

#### The Future of the Industry

Where is the money to come from? For every "market" felled a fraction of a cent tax to Government—the entire sum to be spent in reforesting this wasted, mutilated land.

Federal control first of all; then Federal and State encouragement.

Seedlings, two-year, three-year transplants, grown in Federal or State nurseries, should be made attractively available to all who desire to start a patch of woods.

Every farm has its sterile, arid strips, of little or no use to agriculture, useless even for scanty pasturage.

It often has occurred to the writer that in the country, when two young people marry, no better provision for children, who ought to come, could be imagined than the planting of the waste acres with trees that would be a source of income to those children when grown and ready to marry.

As a nation we Americans are inclined to live for the present only. Seldom do we take thought for those who are to follow us—even for those to whom we owe every responsibility.

All woodlands ought to be, and can be, a source of perpetual income to their owners. On the acreage depends the income. Always lumber will be in demand. Always there will be need of home consumption also.

Let the Federal Government control; the State foster and encourage and make acquisition easy. Would it be a hardship if a State law made it obligatory that a certain percentage of every farm should be planted and maintained in forest?

### New Bill re Cove Receipt Transfers

The Peter Bercovitch which passed the Quebec Legislation at the last session, has been misinterpreted in spirit by several mediums, which have not received or read the full text of the bill.

13 George V, Chapter 6F. An act to amend the revised statutes 1900 respecting the cove receipts, amended by replacing subsection second of section seventeen of chapter first of title twelve, (Articles 7461 to 7464) by the following subsection and articles: Transfers of cove receipts 7461. Any car receipt or any receipt given by a cove keeper or by the owner or keeper or other person, entitled to the possession, use or occupancy of any wharf, yard, timber limit, harbor, boom, warehouse, storehouse or other place for logs, pulpwood or other timber, boards, deals, stores or other lumber or products thereof there laid up, stored or deposited, or any receipt given by any person in charge of logs, pulpwood or other timbers in transit by river or otherwise from timber limits or other lands or by the owner of or any person entitled to receive the same, or any bill of lading or receipt given by a master of vessel or by a carrier of logs, pulpwood, etc., can be transferred as collateral security for the payment of any bill of exchange, debt, note, or liability. Such endorsement, notwithstanding any existing law, vests in the endorsee, from the date of such endorsement all the rights and title of the endorser to or in or in respect to such logs, pulpwood or other timber, boards, deals, stores or other lumber or products thereof, and to all property into which the same or any part thereof may be converted, subject to the right of the endorser to have the same re-transferred to him, if such bill, note, debt or liability be paid when due. In the event of the non-payment of such bill, note, debt or liability when due, such endorsee may sell the said logs, etc.

7464. Any such endorsement of any such cove receipt or bill of lading or receipt acknowledgement or certificate, shall give the endorsee thereof security on the logs, pulpwood and other timber boards, etc., and the same or any thereof may be converted prior to and by preference over the claim of any unpaid vendor or other creditor, save and except claims for wages of labor performed in making and transporting such logs, pulpwood, etc.

The bill was passed with the following amendment,—“Nothing in this act shall be interpreted as affecting the rights of the Crown. This means that the bill as passed was a private one and not a government measure, and that it does not in any sense apply to Crown lands or limits leased by the Government to limit holders or lessees. It does not mean that a limit holder with lease of land has the right to hypothecate the uncut timber on these lands.

### Timber Cutting Operations Increase

W. N. Gilroy, of Coe Hill, Ont., in a recent letter to the "Canada Lumberman," says that he is operating on a much larger scale than he did last winter. Mr. Gilroy, who is a well-known dealer in lumber, pulpwood, railway ties, etc., says that last season he cut only between 200,000 and 300,000 feet and this winter his output will be 1,000,000 feet. There is a strong demand for hemlock and also many inquiries for other lumber, mostly of the better ends. Mr. Gilroy says there are five or six portable mills operating in that section of Hastings County which will all be busy from now on, some of them until July or August next. There is only one stationary mill in that section.

### Sudden Death of Fred. A. Marsh

Fred. A. Marsh, general purchasing agent of the Link-Belt Co., died recently at his home, 6436 Greenwood Ave., Chicago, at the age of 52 years. The end came rather suddenly. Mr. Marsh was a member of the Link-Belt organization for over 33 years and was one of the organizers of the Purchasing Agents' Association of Chicago. He served ably as its first president. For some years he had been a director of the National Association of Purchasing Agents and will be remembered by a large circle of business acquaintances for his sterling character and honor in the important business profession which he so long adorned.

### Converting Shavings Into Wood Flour

Mr. Ben. F. Worcester and his associates of Manchester, N. H., are installing at their Pawtuckaway Box Company factory at Suncook, N. H., five large Stroud Air Separation Wood Pulverizers and five all-metal 100% efficient Stroud Dust Collectors, and the necessary auxiliary machinery and power units.

They will send to this plant all the shavings, sawdust, planer chips and other waste wood from the factories of the Bachelder-Worcester Co. and the Smith Box & Lumber Co., both of Manchester, N. H., and there reduce to wood meal and wood flour, for use in the arts and industries. After six months of careful investigation Mr. Worcester and his friends feel assured that this will prove to be a profitable venture for them. E. H. Stroud & Co., of Chicago, are the makers of the machinery.

## New General Manager for Lumber Firm

John S. Parker, Burk's Falls, Ont.

Knight Bros. Co., of Burk's Falls, Ont., has a new manager in the person of John S. Parker, of Toronto, who succeeds the late J. H. Cole. He recently entered upon his new duties and is meeting with well-deserved success in the service of this established firm of lumbermen and woodworkers. Mr. Parker is no stranger to Burk's Falls, having had charge of the mechanical and electrical department of the Knight Bros. Company's plant from 1912 to 1916. In the latter year he joined the staff of the Hydro-Electric Commission of Ontario. There he was engaged in the municipal department. In this capacity he served four years as district engineer for the Northern and Eastern systems. For the last two years he had charge of the Severn, Wasdells

and Muskoka systems and supervised special development work in New Ontario. Mr. Parker's return to Burk's Falls is welcomed by the citizens of that place for, in his previous residence there, he always took a deep interest in everything that concerned the best welfare of the community.

## Death of John Joseph Whaley

The death took place recently in Guelph, Ont., of John Joseph Whaley, of the firm of Knight, Whaley Co., wholesale lumber merchants. Although he had been in failing health for several months past, he had shown signs of improvement, and relatives and friends were hopeful that he would be able to be around again.

The late Mr. Whaley was in his 64th year, and was a native of Milverton, a son of the late Mr. and Mrs. Samuel Whaley. He farmed for a short time and then went to Huntsville, where he entered the lumber business with his brother, the late Thos. Whaley, and his brother-in-law, the late W. J. Passmore. He came to Guelph 23 years ago, and was for some time a member of the firm of Cockburn & Whaley. When this partnership was dissolved Mr. Whaley became a member of the firm of Knight, Whaley Co., with offices at the corner of Wyndham and Macdonnell Streets, Guelph, and mills at Sundridge and South River, Ont.

Mr. Whaley went to the Southern States regularly for many years and considerable southern stock was handled. He was well known among the lumbermen, and was thoroughly efficient in his line of business, of which he possessed a wide knowledge. Mr. Whaley was an ardent curler and bowler, but during the past two or three years had not taken the time to participate in these pastimes. He was a prominent member of the Masonic order and was unmarried.

## Forest Products and French Treaty

Several Canadian forest products are affected by the new commercial treaty between Canada and France. The following come under the minimum French tariff:

Woods: common, logs, rough, not squared, with or without the bark, of any length, and of a circumference at the thickest end of more than 60 centimetres; wood, squared or sawn, 80 millimetres in thickness and above; stave wood; splints; hopwood and prepared poles, logs of 1 millimetre, 10 centimetres in length or less; resinous wood in logs; wood, planed, grooved and (or) tongued; doors, windows, wood cut for roller blinds; small wooden wares.

The following enjoy the benefit of the percentages of reduction mentioned, such percentages to bear on the difference between the rates of the general tariff and those of the minimum tariff: Wood, squared or sawn, less than 80 millimetres, but not exceeding 35 millimetres in thickness, 60 per cent, wood, sawn, 35 millimetres in thickness or less, 50 p.c.; casks, empty, serviceable, fitted together or not, 50 p.c.; manufacturers or turned wood, 40 p.c.; vats and tubs put together or not, 25 p.c.

## Fur Trade Ruined by Forest Fires

"The fur trade is being driven from the country by the northern forest fires," said Robson Black, of Ottawa, secretary of the Canadian Forestry Association, who was introduced by Gen. J. B.

White to the Westmount Women's Club recently at Westmount, Que. Mr. Black held that the fire-swept belt of the north was automatically dead, as a fur-bearer, for the next 200 years, as the most valuable animals had been expelled by the fire to inaccessible haunts, even further north. This was one of the indirect results of the fires which had destroyed ten times the wood used by the choppers during the last few years.

L. P. Kearney, Challis House, Sydney, Australia, importer and exporter wishes to be placed in touch with Canadian exporters of wood veneers, manufactured fir doors, and lumber for furniture. He is also an exporter of Australia hardwoods, cabinet woods, sleepers, etc.

On the matter of Christmas trees, the forestry man was inclined to be tolerant. He thought the unique delight they gave to the hearts of children was more than sufficient reason for their being cut. He thought, however, that the farmer, on whose land they often grew, should obtain higher prices for his trees.

Mr. Black covered familiar ground. He pointed out the value of conserving Canadian wood, for which there was an ever-rising market; and touched on limitations of resources, the manifold uses to which wood was bent in every active branch of enterprise, and the devastation wrought by the fire-fiend.

## Some Aspects of Proper Cost System

Editor, "Canada Lumberman,"

We are learning much these days of keeping correct costs. One has only to look over the cost estimates sent in by millmen for comparison with the estimates of their competitors to realize that methods and standards used in the different plants are anything but uniform. Whether this state of affairs is a healthy one I would not venture to say.

However, there are some men who think it is, and bring their tale of woe to association meetings telling of price cutters in their district and how these chaps are making life unbearable for the man trying to do business on a fair, profitable basis.

Their theory is, that these competitors know nothing about keeping correct costs. Their fellow members tell them to be patient assuring them that their tenacious competitors will soon go broke. But if we could follow up such complaints we would be surprised to find these so-called unethical competitors are sometimes very prosperous.

Right here I might point out the incontrovertible fact that accurate cost keeping will never bring about a uniform selling price. The sooner that some men waken up to the fact that co-operation in relation to prices will never replace healthy competition, will they pass into a saner plane of merchandising. I am an ardent advocate of correct cost knowledge which, in other words, means economical business methods, but do not believe in a man conforming unconditionally to other men's methods when it comes to selling his product.

This may seem a little radical to present day thought when progressive bodies of merchants are gathering together in every part of the land to talk over uniform methods. The trouble is that some men, after they see the good fruits of association work on a broad basis, depart from the straight and narrow path, and defying precedent, endeavour to establish co-operation in the stead of competition.

I have an instance in mind where a reputable contractor complained of a competitor building houses at a figure that at first seemed almost incredible and most unbusiness like. For comparison purposes we'll call the complaining contractor, "A," and the so-called transgressor "B." According to actual figures for the year contractor "A" finished twelve jobs, taking an average profit of \$700 on each job. This netted him \$8,400 profit for the year. Contractor "B" finished eighteen jobs in the year of the same kind of work, but only took a profit of \$550 on each job. He, thereby, undersold "A" by \$150 on each contract, but on the year's work received a net profit of \$9,900. He not only makes more money, but in times of keen competition takes business away from his competitor. It is readily understood how both of these contractors could have exactly identical costs and yet one could undersell the other on a businesslike and profitable basis. Contractor "B" would, of course, have to be sure that he could secure and handle the increased business in the year to enable him to work at such a price. But this would not be difficult to accomplish if he had a good reputation and bent every effort to augment his business. The reduced price would certainly be a big item in his favor.

In this case it never occurred to contractor "A" that "B" was anything but an ignoramus, but as he found later his competitor had his fingers on his costs which enabled him to plan his "increased business" campaign so efficiently.

Yours sincerely,  
Foresight.

## The Passing of Eminent Forester

Many friends through the forest products industry in Canada will regret to learn of the death of Dr. B. E. Fernow, former dean of the Faculty of Forestry, University of Toronto, who passed away at his home on Admiral Road, Toronto, recently. He was an outstanding scientist and expert on forestry and had a unique record of achievement and success. He was a native of Eastern Prussia where he was born in 1851 and after his academic training, he came to the United States in 1876 where he spent his first few years in the conversion of wood into alcohol.

During this part of his busy life he made himself practically acquainted with the value of forest trees for a variety of purposes, and he ultimately resolved to open an office in New York as a forestry expert. The reputation he made for himself in a country which was

The late Dr. B. E. Fernow, Toronto

giving little attention to the preservation and renewal of the natural forests led to his appointment in 1886 to superintend the forestry work in the United States Department of Agriculture, an occupation in which he spent a dozen years. From 1898 to 1903 he was Dean of the New York State College of Forestry in connection with Cornell University.

Within that interval he was invited to give an address to a convention in Toronto, in the course of which he summed up the most effective means of preserving in full vigor the natural forest in the formula, "Leaves, leaves, and more leaves." It was one of his favorite maxims that the preservation of the fallen leaves is the best means of promoting the vigorous growth of the trees in the forest. Later he spent some time in propagating his views and methods in connection with Yale University and the University of Pennsylvania.

In 1907 it seemed good to the Government of Ontario and the authorities of the University of Toronto to establish forestry as an academic department of the latter. From that time till his voluntary retirement in 1919, on account of failing health, he labored persistently and successfully to impress on the University, the Government and the general public the necessity of preserving the original forests that have survived and replacing them by reforestation where they have been destroyed by axe or fire. In the intervals of his academic work he made many visits to Northern Ontario, where much of the original forest has been destroyed by fire as well as by axe and saw. The only means of reforestation of devastated regions are those he persistently advocated with apostolic zeal—replanting devastated areas and lessening destruction by fire.

## May Have to Get License to Enter Woods

The provincial authorities of Ontario have under consideration a proposal to compel every tourist to take out a license before entering a forest in the province and to inform the forest ranger of his whereabouts. This is a plan proposed to minimize the great losses to the province through forest fires. It was laid before the lumbermen by the Government recently and was lately laid before the delegation of the Associated Boards of Trade by Premier Drury.

Both bodies viewed the proposal with approval. The delegation from the Boards of Trade submitted a number of resolutions to

the Government including one that greater effort should be made to maintain the forests of the province.

It was spoken to by James Keenan, lumberman, of Owen Sound, who pointed out that ten feet of timber was burned to every foot destroyed by the axe and only one quarter of what was cut down was being replaced, claiming that the province was being denuded of her timber resources.

Hon. Mr. Drury said there was an offer to plant free of charge any lands secured by municipalities. This offer has been open for some time and only 15 townships and two counties had taken advantage of it.

The municipalities could often get these lands at little or no costs and would become great assets. "It is for you gentlemen to urge this project along," said the Premier.

## Fire King Still Reigns Undisturbed

Some startling facts in regard to the great losses sustained by fire in Canada were presented at the annual meeting of the Dominion Fire Prevention Association which was held in Ottawa recently. W. H. Shapley, chairman of the D.F.P.A., stated that while the citizens of the Dominion are complaining of the burdens of taxation they are allowing \$45,000,000 worth of property to go up in smoke each year, to say nothing of the accompanying loss of life. Canada was up to date in other matters, he said, and there was no reason why the country should not excel in its fire prevention measures.

That the association met this year under the shadow of the greatest loss of property by fire that has ever occurred in a single year in Canada, was the statement of G. B. Finlayson, superintendent of insurance, who is secretary of the association. In 1922 the loss reported as being \$50,000,000. The amount collected as income tax was less than the amount of the fire loss last year, it being \$46,000,000.

During the year 1922, fires in Canada numbered approximately 26,279, the loss being over \$5,000,000 greater than in 1921.

"There is no reason why counties should not take it up and even towns. We are ready to supply up to 50,000,000 young trees a year."

Mr. Finlayson said that \$19,842,243 of the total fire loss was in cities of more than 10,000 population, while \$12,831,290 was in rural districts, not included in the Northern Ontario fires.

## BERNARD SAFETY CLUTCHES

### Combined with WOOD SPLIT PULLEYS

**T**HE use of friction pulleys and clutches in a manufacturing plant and saw-mill, is an insurance policy of economy and safety. Who is not familiar with the enormous losses sustained every year by manufacturers and mill owners, due to frequent stops of the whole plant for only one machine in bad order.

Cut your expenses and prevent accidents in installing a Bernard clutch on each of your machines.

We are at your service to answer all your wants. We manufacture the most general and varied line of pulleys and clutches, in Canada.

Ask for our catalog.

**The A. Bernard Industrial Co.**

Young Man, 28, wishes to learn the lumber business preferably the selling end. Has had some selling and several years experience in accounting and office work, any place in Canada. Box No. 71, Canada Lumberman, Toronto. 1-6

WANTED—for coming season—position as sawyer on left hand rig, either bands or circulars. Fifteen years experience on fast rigs. Best of references. Write or wire Peter Dennis Leggers, Gen. Del., Winnipeg, Man. 5-6

WANTED—position as superintendent or manager of lumber company. 8 years experience in bush operations, manufacturing, shipping, etc., and general office work. Licensed culler. Best of references. Box 150, Canada Lumberman, Toronto. 5

EXPERIENCED LUMBER SALESMAN, speaking both languages desires to represent wholesale lumber company in Montreal and Quebec province on commission basis. Address Geo. H. Thibault, Room 211, 180 St. James Street, Montreal, Que. 5-6

WANTED—Position as woods superintendent. Twenty years experience in logging and river driving logs or pulpwood. Can handle the business thoroughly, either jobbers or company camps. Best of references, both languages, and married. Box 146, Canada Lumberman, Toronto. 5-8

POSITION WANTED as office manager or yard manager by advertiser. Eighteen years lumber trade experience. Can handle work and staff. Married, age 38 years, British. Reasonable salary. Any location. Write first instance Box 139, Canada Lumberman, Toronto. 5-6

RELIABLE YOUNG MAN—would like to get agency from wholesale lumber concern, to sell in Nova Scotia and Newfoundland on commission. Have had fourteen years experience in building and handling lumber. Can furnish references. Box 121, Canada Lumberman, Toronto. 4-5

Situation Wanted—Married man wishes permanent position Cashier or Book-keeper have had twenty years experience in the Lumber Business, speaks English and French, can furnish Bonds and also best of testimonials, all replies treated confidential. Box 92, Canada Lumberman, Toronto. 2-5

WANTED—Position as Superintendent, or manager of lumber company. Eighteen years practical experience, which time have been with but two concerns, holding these positions with success. Would entertain subordinate position with future and prove ability. Forty years old and married. Unquestionable references as to ability and integrity. Box 80, Canada Lumberman, Toronto. 4-7

YOUNG SCOTCHMAN—Married, abstainer, wisher permanent position as bookkeeper, stenographer and general office man. Have had following experience: Six years' banking, two years' assistant bookkeeper and stenographer, London, England; eight years' lumber office experience; have also general store bookkeeping experience. Apply Box 41, Canada Lumberman, Toronto. 5

AGGRESSIVE YOUNG MAN—with ability, integrity and 5 1/2 years and valuable experience in lumber offices, desires permanent position that has a good future with progressive concern. Have been accustomed to handling correspondence, orders, sales and bookkeeping. Prefer to locate in Georgian Bay district or Northern Ontario, but other places considered. Excellent credentials. Replies treated confidentially. Box 148, Canada Lumberman, Toronto. 5-6

A YOUNG MAN, twenty-seven years old, with high school education, and business college training, desires position as lumber shipper, assistant bookkeeper or other clerical work. I have had charge of hiring, loading crews, sorting out lumber and loading cars in six places in the central part of New Brunswick for United Lumber Limited, with Head office at 7 East 42nd St., New York City, and a branch office in Fredericton. I worked in an office of a lumber company for over a year. Box 123, Canada Lumberman, Toronto. 4-5

## Situations Vacant

WANTED—Sawyers, Filers, Setters, Edgermen, Mill Hands. Apply Box 109, Canada Lumberman, Toronto. 3-7

WANTED—Capable lath and picket mill foreman, one who is able to take entire charge in every respect. In reply give experience and salary desired. Apply Bishop Lumber Company, Limited, Nesterville, Ontario. 3-5

WANTED LIVE YOUNG MAN for retail hardwood yard in Toronto, to act as yard foreman, inspector and shipper. Apply in own handwriting, giving details of education, experience and salary desired. Box 144, Canada Lumberman, Toronto. 5

WANTED—Assistant mill foreman for white pine operations. Must have had past experience, know how to efficiently manufacture lumber and also how to repair and maintain machinery. Apply Bishop Lumber Company, Nesterville, stating past experience and salary desired. 3-5

## Business Chances

A COMPETENT PARTY would take charge of sawmill for season 1923, to saw by contract. Apply Box No. 142, Canada Lumberman, Toronto. 5

OFFICE MANAGER OR SECRETARY, active and reliable, who can invest \$5,000.00 in good going concern, in one of the best towns in Ontario. References required. Apply Box No. 132, Canada Lumberman, Toronto. 5

### Wanted

A tie and pulpwood limit in Ontario near river which flows into lakes or Georgian Bay. Apply to Canadian Dealers and Jobbers, Ltd., 140 St. Peter Street, Quebec, Que. 3-6

### For Sale

Rixon-Ainslie-Stoddart Sawmill at Owen Sound. Splendid power plant and machinery. Will be sold cheap. Apply Keenan Bros., Ltd., Owen Sound, Ont. 23 T.f.

## Lumbermen

Please send your stock sheets with prices delivered Detroit on hardwood lumber, also customer's contract for mill-cuts to A. H. David, 2626 Taylor Ave., Detroit, Mich 1-11

## To Wallboard Manufacturers

We are desirous of taking an agency for Great Britain for a well manufactured Wallboard. Frank Rosser, 53 Chorlton St., Manchester, England. 24-5

## Wanted

to correspond with parties who can deliver 500,000 feet or more 8" jack pine logs to vessels anywhere in Georgian Bay. Address Hine Lumber Co., 3-123 General Motors Building, Detroit, Mich., U. S. A. 5-8

## For Sale

Mill and Timber Limits for sale. Timber large proportion Hardwood. Mill twenty thousand capacity. Large cattle and breeding ranch. Will sell with or without ranch. Located in Eastern Ontario. Address Box No. 50, Canada Lumberman, Toronto. 22T-f.

## For Sale Cheap

Circular Sawmill, Building and Machinery; Steam Feed, suitable for Ties and Lumber. also

Small two-storey Brick Factory, well-located, with or without woodworking machinery. Apply to John Harrison & Sons Co., Limited, Owen Sound. 24 T.f.

## For Sale

SPECIAL OPPORTUNITY, to join with owner of valuable timber property on waters tributary to main line of C. P. R. in British Columbia.

Cedar, Spruce, White Pine and Hemlock 120,000,000 feet.  
Would dispose of part interest on very attractive basis.

Full particulars on application to H. Y. T., 9 College Street, Toronto. 5-8

A SPLENDID OPENING—OPPORTUNITY IS OFFERED to a thorough lumberman of executive ability with good active selling and buying connection, to join another lumberman who is well known and connected in the export trade, with a view of starting a wholesale and export business. Advertiser has \$25,000.00 available and would expect associate to be also financially interested. Negotiations strictly confidential. Address Box No. 94, Canada Lumberman, Toronto. 2-5

## Partnership Wanted

"Lumber Exporter with \$25,000.00 cash, for many years partner and manager of a well known lumber export firm now liquidated, with excellent connections in England and well known in Canada and the United States, would like to form partnership connection with an established and reputable lumber manufacturer, or wholesaler wishing to enlarge their business. Strictly confidential. Full particulars and outline of proposition to be addressed to Post Office Box 284, Montreal." 3-5

## For Sale

Timber Berth No. 200 in the Township of Morin on the North shore of Lake Huron containing 34 1/2 square miles more or less. The limit contains mainly white pine, there is also a large quantity of spruce, cedar, birch and hemlock. A list of supplies on hand and equipment may be seen at the depot. A complete logging and driving outfit consisting of sleighs, boats, two gasoline launches, thirty-four horses, etc. Tenders will be received by Fraser & Co., 74 Nepean St., Ottawa, up to the 10th of May 1923. Further particulars may be had on application. 5-9

## Miscellaneous

D. FLORENCE & SONS  
Bethune St., Peterborough, Ont.

Dealers in Scrap Iron, Metals, Second-Hand Machinery, Pipes, etc. 2-24

FOR SALE:—Used Belting, Rails, Blocks and Pulleys. Send us your Scrap Iron and Metal etc. Highest market price paid. A. Low and Company, 264 Simcoe St., Peterborough, Ontario. 1-24

# Review of Current Trade Conditions

## Quebec Lumbermen Have Several Shipping Difficulties

Lumber operations in the woods in the district of Quebec, are proceeding splendidly. The winter conditions have been ideal and the woodsmen happy in their camps. The same conditions do not, however, prevail in Gaspé or limits on the Lower St. Lawrence bounded by the Coast, which sections have repeatedly been swept with violent snow storms and falls of snow of unusual depth. Reports from lumber camps on these conditions say that the storms are so incessant and the snow so deep as to threaten the camps and retard log cutting. The same storm conditions are said to have prevailed in Nova Scotia and New Brunswick to make operations in the woods difficult. It is strange that this severe weather which has been sweeping the Atlantic for the past two months and ravaging the coast towns, has given the district of Quebec a wide berth.

The lumber interests of Quebec are much exercised over the railway freight car embargo which has been holding up Canadian shipments to the United States for the past four months. The various Quebec firms have their books filled with American orders and are unable to ship for want of cars. The American embargo is caused by the shortage of rolling stock ever since the shop strike in the United States and the large number of locomotives and freight cars out of repair as well as the severe winter climatic conditions in the United States. There was recently between seven and eight million feet of manufactured lumber ordered waiting at the various mill bases to be shipped to the central markets of the United States which cannot be moved on account of the embargo and shortage of cars. The Quebec firm of W & J. Sharples Limited, have 2,500,000 feet of manufactured lumber to ship, and the other firms are in the same category.

On the first day of last month the Canadian lumber interests were officially notified by a circular from the American railroads to the effect that the embargo was lifted but that no American railway cars were available to cross into Canada to move the lumber. The removal of the embargo did not seem to alleviate the situation owing to the fact that no American railway cars could be procured and the Canadian railways would not allow their cars to cross into the United States with the uncertainty of not having them returned. The Quebec shippers in the meantime were using all their endeavors to have the Canadian National Railways furnish the necessary freight cars without success. On February 9 another official circular was received from the American railway interests to notify the Quebec shippers that the embargo was again declared to hold up their business and keep them guessing when they will be able to ship their wood to their American customers.

## Business in Montreal Continues Favorable

Conditions in the Montreal market are very favorable. Business is good, there being no difficulty in disposing of desirable lines at the enhanced values now current. A position has developed which was not expected by many wholesalers. They looked for an improvement, but they did not, as a rule, anticipate that it would set in so strong during the winter months which are usually quiet. The demand is much larger than was looked for, and prices have responded to this free buying. While some nice business has been booked for local industrial concerns, the chief source of the orders is from the border, where customers are apparently purchasing in the belief that values will go still higher. Some very large blocks of spruce have been sold for American account at quotations which represent fair advances. The recent orders, combined with comparatively small stocks, have resulted in prices advancing in a way which came more or less as a surprise.

The retail trade is on the quiet side, but some firms have bought extensively in anticipation of building operations opening up. It looks as if there will be a very good constructional season, as inquiries for large quantities of lumber have been received. In addition to the house programme, there are several important building projects in view which will require considerable lumber.

Complaints of a shortage in cars are still being made. The scarcity of cars and the transportation difficulties, due to storms, are causing delays in the shipment of lumber. Lath is in free demand and prices have strengthened.

Hardwoods continue to show great firmness. The buying has been on a satisfactory scale at better prices.

A fair amount is doing in B. C. forest products, although the

high prices are not favorable to the extension of trade.

Men for the camps are still in demand and are difficult to secure. The representative of one large concern who visited Montreal in order to obtain help, could only obtain five men. Another was even less successful. Apparently there is a great disinclination to go into the bush, it being reported that many who signed earlier in the season have quit for other jobs or for no jobs.

Recent advices from the U.K. are to the effect that there is likely to be a stronger demand for Canadian lumber when the season opens here. An inquiry for a very substantial block of spruce has been received.

## Trade in Ontario Affected by the Weather

Owing to the severe storms and cold weather for several days the epidemic of flu and other disturbing causes, the volume of business done throughout Ontario in the lumber line was not as large during the last two weeks in February as it might otherwise have been. Most yards are pretty well stocked up and are awaiting the advent of spring before making any large purchases. Generally speaking stocks with the retailers are fairly full at the present time and it is not known definitely yet how building will shape up in the smaller towns and villages.

In the meantime there is a feeling of optimism prevailing in most quarters, with a confident assurance that 1923 should be a good year in the lumber line if structural activities are normal and the expected industrial revival is not too long delayed. Values are maintained at a firm level and manufacturers are in most cases holding out for a considerable advance over last year's figures. They contend that production costs are higher. Wholesalers who have been buying some moderate-sized stocks, are not inclined to take too great hazards. They realize that it is difficult to get dry lumber at present in sizeable quantities and that stocks in mill yards are lower than they have been for a long time.

No one knows exactly what shape the market will assume after June next when the new cut comes on. All millowners are preparing for active operations during the coming season and entertain but little apprehension that they will be able to dispose of their stocks at a satisfactory figure. The American demand keeps up well and inquiries are numerous. Most of the wholesalers, however, are adopting a conservative attitude and while they are purchasing in moderate quantities, they are not digging deeply into 1923 sawing at the enhanced figure. In the meantime, it is easy to dispose of dry lumber today, particularly in the upper grades.

In most parts of Ontario manufacturers report that logging operations are being continued under ideal conditions and while the snow has been a little too deep at certain points, still hauling and skidding facilities have been carried on satisfactorily.

Word received by Eastern Canada representatives of B. C. mills is to the effect that there has been an advance of several dollars on commons. Clear stocks, however, remain at the old figure.

Speaking of conditions generally, one leading representative said there is not at present any decided tendency on the part of dealers to do much buying. There is an occasional car being placed here and there but it is only being done when the stock is required for immediate shipment or for some special work. Boards and shiplaps advanced \$3.00 recently, timbers another \$1.00 and cedar bevel siding \$2.50. The base price of timbers delivered in Toronto, is now \$54.25 and the ordinary sizes of dimensions, 2 x 4, 6, 8, etc., up to 14 feet, No. 1 common fir, 1/4 scant, are now quoted at \$51.25, while shiplap and boards have a base of \$45.25, Toronto delivery.

The spread between Ontario woods and British Columbia woods is now wider than ever before, and salesmen for B.C. stocks say unless Eastern mills make radical increases in their own stocks, they may not be able to ship very much into this market except clears.

Speaking to the "Canada Lumberman" one salesman said:—"The question might be asked, 'Why is the advance on British Columbia stocks necessary?' There are several factors entering into the situation out there which must be taken into consideration before we brand the West Coast Manufacturers as hold-up experts. The most important feature is the export market which, for the last three months, has been very strong and is showing more strength every week. Vessels which were chartered last Fall are now due for sailing and the business has to be placed with the mills at any cost. How long this will last will depend entirely upon conditions in the various countries to which this stock is going. We also have

View of Mills in Sarnia.

## ***“On Time” Delivery***

Getting the goods delivered ON TIME is just as important as being able to produce them—and we make a specialty of both. Ask any retailer or woodworking establishment who has been using our A 1 NORWAY or WHITE PINE LUMBER.

We also make a specialty of heavy timbers, cut to order any length up to 60 feet from Pine or B.C. Fir. Quotations will be gladly forwarded upon request.

***“Rush Orders Rushed”***

# **Cleveland-Sarnia Sawmills Co., Limited**

**SARNIA, ONTARIO**

**B. P. BOLE, Pres.   F. H. GOFF, Vice-Pres.   E. C. BARRE, Gen. Mgr.   W. A. SAURWEIN, Ass't. Mgr.**

a very keen demand from the U.S. Atlantic Seaboard. The wholesalers of the United States are convinced that lumber is as cheap now as it will ever be and they are buying in heavy quantities. Another feature that we must not forget is that the large railway companies are placing orders for car material in quantities heavier than has been seen for some years and they expect that this will continue for, at least the first half of this year.

"For the first time in a long while the West Coast manufacturer is in a position to make a reasonable profit on the lower end of his product. With conditions as they are at present, and with the factors already enumerated, it can hardly be expected that they can do anything else than raise their price and, in fact, they can hardly be blamed for doing so. These are a few of the reasons why we might say the advances have been justified. The retailer, knowing that business is not active down East, will perhaps wonder why West Coast lumber is moving upward. Many are of the opinion that the advances have been due to new year resolutions on the part of the lumbermen and that we will see a recession within a few weeks. It is my opinion, however, that the new levels have come to stay for the best part of spring and probably into the early summer."

In Canadian hardwoods there is continued activity. Stocks are scarce and those who are getting them out are inclined to hold the cut at a high figure. The demand for Canadian birch, maple, and basswood just now comes principally from Chicago, Grand Rapids and Detroit, and there are large requisitions for 5/4, 6/4 and 8/4 with a decided scarcity in 6/4 in No. 1 common and better. Western shipments are reported to be fairly prompt but in the East wholesalers declare there are a number of embargoes at different points and it is not possible in numerous cases to secure permits to have cars of lumber, delayed in some instances for weeks, go forward. It is hoped that this state of affairs will be overcome in the near future.

Prices in all lines of hardwood are well maintained. The demand from automobile manufacturers, agricultural implement makers and railways is active and indications on the part of these consumers are to fill their needs at the present price levels. Furniture factories are not buying much at present and are reported, except in a few instances, to be rather quiet. On the whole, the hardwood situation is viewed favorably, and if values do not soar out of sight, apparently there is no valid reason why 1923 should not be a good steady year for both operators and distributors.

### No Weakening of Spruce Prices at St. John

The last two weeks have seen no weakness in the spruce market. The whole trouble is lack of railway markets as the entire Boston & Maine system is embargoed and each week seems to see this condition grow worse, largely aggravated by the snowfalls which have taken place; also lumber is tabooed, coal and foodstuffs being given the precedence.

The yards over in New England and New York are very low in stocks of spruce and in many cases on the New Haven Railway are hauling long distances with trucks through snow to try to keep supplying some propositions which are being erected.

Prices for narrow random continue to bring \$27.00 to \$28.00 on cars, St. John, with 2 x 8 at around \$35.00 to \$36.00.

Lath have also stiffened, and as high as \$6.75 per M. has been paid for them alongside vessel St. John, while \$6.50 per M. has been paid for 1923 cuts ending next December.

The English market has not weakened and the brokers, while not making any high bids, are offering pretty fair prices. As yet the brokers are not speculating but just feeling around. Certainly with the shortage in the log cut in Nova Scotia, one might say from 300,000,000 feet down to 100,000,000 feet and not over 400,000,000 feet in New Brunswick against a usual 800,000,000 feet, with no old stocks left, manufacturers should certainly have a good steady market, and if the Continental situation clears up shortly, prices should improve to where there is a profit in production.

Freights have not changed any although it is said one or two charters have been made at 60 shillings.

Local business is dull, very cold and snowy weather having practically tied up building.

### Halifax Reports Active Shipment of Deals

The season has now reached a point where the output of lumber for the current winter can be estimated with some degree of accuracy. The snow fall has been almost unprecedented, with very little rain, and the adverse weather conditions, which have shown very little, if any improvement since the beginning of February, have seriously interfered with lumbering operations both in this province and New Brunswick, and it is difficult to see how a shortage can well be avoided.

The larger portion of the winter cut spruce and hardwood is

being manufactured into deals for the British market, and shipped from Halifax as fast as transportation facilities permit.

Since the beginning of the year, the demand from the United Kingdom has been quite active, with prices satisfactory, while the rate of Sterling Exchange has been steadily drawing nearer par.

The latest reports from the other side have been rather disquieting. The market is reported in a depressed condition, with prices averaging about a pound per standard less. In view of the limited offerings from this side it is difficult to find a satisfactory explanation of this decline, and the general opinion is that it is only temporary. It is not thought to be due to any weakness of the lumber trade itself, but is a reflection of the general unsettled conditions in Europe.

The American market continues strong, and shipments are going forward as rapidly as the numerous embargoes will permit.

The principal sizes in demand are 2" spruce and hemlock boards. The lath market which went off rather badly around the beginning of the year, shows signs of a revival. This is no doubt due to the fact that many of the mills that expected to saw laths during the winter were forced to quit, and there are few surplus laths in sight for the spring trade.

Water shipments, which usually terminate when winter comes, have this year been continued from the Port of Halifax during this winter at a reduced scale.

It is safe to predict that when the snow goes off, and winter operations have been brought to a close, practically all the manufactured lumber will have been shipped, and only the summer cuts which are small in the aggregate compared with the winter cut will remain to be disposed of.

### Nova Scotians Prefer the British Market

In the discussion on the spruce outlook, which took place at the recent convention of the Canadian Lumbermen's Association in Montreal, one of the speakers was Rufus E. Dickie, of Stewiacke, N. S. Mr. Dickie is president of the Nova Scotia Lumbermen's Association and was re-elected a director of the C.L.A. for the coming year. He was reported as saying that the Canadian spruce product hardly met the particular British market and that the main export for spruce would be to United States. Mr. Dickie states that this assertion is not correct. What he did say was that Nova Scotia lumbermen are selling all they can in the British market. Buyers there are not so exacting regarding quality and manufacture as American customers. He also adds that the difference in specifications, etc., considered, British importers are paying prices which leave a better net return to the manufacturer.

### Fraser Companies Operated at Capacity

The annual report of the Fraser Companies, Limited, of Edmundston, N. B., for the year ending December 31st 1922, shows net profits of \$804,614, compared with \$1,001,459 in 1921. From the net profits of \$804,614 are deducted \$368,750 for bond interest and \$221,247 for other interest, leaving a balance of \$314,617, which, added to last year's surplus, leaves a total of \$1,097,759.

From this balance there is appropriated depreciation amounting to \$209,455; depletion, \$57,840; annual proportion of discount on securities sold, \$31,500 and Dominion Government taxes, \$5,205. Inventories are written down to replacement value as at December 31 by an appropriation of \$270,000 from profit and loss for that purpose. After these deductions there remains a balance at credit of surplus account of \$523,759 against \$783,142 a year ago.

The president of the company, Mr. Archibald Fraser, in his report to shareholders, says, in part, as follows:—"Your mills were operated at capacity throughout the year, resulting in reduction of inventories to normal. During the year your company redeemed and cancelled \$250,000 par value of its first mortgage 6 per cent. bonds, of which there are now outstanding \$1,750,000 par value. Since the date of your last balance sheet current liabilities have been reduced by more than \$1,000,000."

### British Columbia Fears Runaway Market

Special artificial prices for lumber are worrying the British Columbia lumbermen, as they fear that the reaction after a runaway market may be detrimental to the industry as a whole and may eliminate many of the profits already secured. Seattle and Portland wholesalers have been running up the price.

They have not only market commitments in Eastern States, but also have considerable space arranged for. Under ordinary conditions they would be able to secure their lumber from the Washington and Oregon mills, but for three months there has been a serious log shortage interfering with lumber production in those States. This drove the buyers to British Columbia, and they offered almost any price for spot lumber.

## It Meets Every Northern Logging Need

In swamping out roads, toting supplies, skidding logs, or making up and hauling trains, the Northern "Caterpillar"\* Logger does all the things a machine must do to be a real success in winter logging work. Its flexible tracks enable it to climb over obstructions, cross small gullies, and operate uninterruptedly both on and off the road. It is easy to control, turns in its own length and provides the correct speed for every operation. Where heavy snowfalls bury the roads and camps, the Northern "Caterpillar"\* Logger quickly plows through the drifts and gets traffic moving. We are equipped to give immediate service on spare parts. Write today for descriptive catalog.

### East Reports Steady Shipments to Ireland

During the last few weeks practically no lumber has moved by rail from St. John and vicinity, caused by the embargo set by the Maine Central against lumber for B. & M. points. No movement took place on the New York, New Haven & Hampshire Railway. It was opened up for a few days to lumber but closed again before anyone had a chance to get anything moving.

Storm after storm has caused many of the small operators to quit yarding logs in the woods, and as far as nearby counties are concerned, the cut will be considerably reduced. In many cases no logs had been cut, camps only having been completed as the jobbers were late in starting operations. In all probability should the snow continue as deep for the next month, at least, a shortage of 100,000,000 feet will be the effect.

Shipments to Great Britain and Ireland, especially the latter, continue to go forward, and each vessel leaving port, particularly the Irish vessels, is carrying good quantities of lumber. This is making a fine impression on the stocks here and spring will find very little old on hand either 1922 or earlier cut.

The market is no weaker, and has been steady both in the American and British countries. No selling has been done as shipments to the American market are about impossible. Manufacturers are not pressed for funds, and, realizing the conditions in the markets, refuse to sell and certainly feel that spring will bring a solid market, and prices should range \$2.00 to \$3.00 per M higher than to-day.

British buyers are beginning to make offers for deals from this side for 1923 cuts but only in limited numbers. One or two sales have been effected, it is said, around \$26.00 to \$27.00 per M for 6/3, and under 7 and 8 x 3 at about \$30.00, 9 x 3 and 11 x 3 at around \$38.00; the whole to average about \$32.00 on sellers' docks. This is only a fair price compared with the cost of logging, etc.

No mills are running this winter at St. John. The portable cut is limited. Many of these mills are sawing English as well as American sizes and their cuts are well divided.

Laths are firmer. The quantity being cut and delivered is certainly going to be much less than ever figured, and by spring buyers will certainly find an extreme shortage under figures estimated. They are selling to-day about \$6.50, f.o.b. cars St. John.

The box trade is also improving very slowly and some export business has been closed. Local business is almost at a standstill and will, no doubt, remain so until warmer weather sets in.

### Good Prices Secured on Spruce Pulpwood

Three pulp and timber areas in Northwestern Ontario were involved in sales which the Crown Lands Department completed recently at the Parliament Buildings, Toronto. The areas involved were small, being only two and one-half square miles in the aggregate, but the transactions were notable for the high price which spruce pulp realized in one instance, the satisfactory figure of \$3.51½ per cord being bid for the wood in Stirling Township. The concessions sold and the price realized in each instance, crown dues being included, were:

The west half of Stirling Township, one-quarter square mile in area, which was secured by the Russell Timber Company of Port Arthur. The prices agreed to are \$12.03 cents per thousand feet for spruce timber, \$3.51½ per cord for spruce pulp, and 76½ cents per cord for fuelwood.

A concession on the Lake Superior Division of the C.N. Railway was awarded to J. E. Cook, of Fort William, who bid \$2.15 per cord for spruce pulp and \$1.40 per cord for other pulp.

A one-quarter square mile tract, on the north half of lots seven, and one in Cane Township, for which the successful tenderer was Donald Duff, of Cane, P.O. His bid was: Pine timber, \$4.25 per thousand feet; spruce and poplar timber, \$3 per thousand feet; other timber, \$2.50 per thousand feet; ties, 30 cents each; spruce pulp, 90 cents per cord; other pulp, 50 cents per cord; fuelwood, 35 cents per cord.

### Are Millwork Prices too High?

Why is it that the home builder always expects cheap woodwork? He is willing to pay a fair price for almost every other item entering into a house, but when it comes to the woodwork, especially if a high class job is required, he usually balks at the price.

Commenting on this phase of the millwork business, a prominent woodworker stated that recently he was approached by a prospect who had considerable means, and asked to quote on some built-in fixtures for his new home. This home-builder had his quotations on lumber, heating and all other work. When buying the hardware, two different styles and finishes were shown, the difference in price being in the neighborhood of \$225.00, and the high price line was

the Province. It was held by the Treasury Department that this purchased without a murmur. When the cost of the millwork was submitted to him, he went straight up in the air. All the other items which went into his house had met with his approval,—high-priced hardware, costly face brick, lighting fixtures, plumbing fixtures, etc., yet when the millman quoted a fair price, in fact a competitive price, the customer thought he was being robbed.

Does this not suggest that the millwork industry either individually or collectively, should take steps to educate the public to the fact that millwork prices are too low, if anything, and to the value and satisfaction to be derived from having high-class woodwork in the home.

### Now Has Charge of Toronto District

J. A. Cadenhead, who for nearly two years has been on the inspection staff of the National Hardwood Lumber Association, Toronto, was recently placed in charge of the Toronto District, succeeding H. F. Holton, who, however, continues in the service. Mr. Cadenhead is well known in retail, wholesale and manufacturing ranks and his father, the late Alex. Cadenhead, was for many years associated with the Laidlaw Lumber Co. Previous to coming to Toronto the family resided in Midland. J. A. Cadenhead secured his first position with the Laidlaw Lumber Co., and after seven years' service with them, joined the Edward Hines Lumber Co., of Chicago, where he was employed on the grading and inspection staff for six years. For two

J. A. Cadenhead, Toronto

seasons he was located at Owen Sound where he spent the time in the mill of the Carney Lumber Co., the output of which was taken by Mr. Hines. Mr. Cadenhead was subsequently in Virginia, Minn., inspecting the stock of the Virginia & Rainy Lake Lumber Co., which was disposed of annually to Mr. Hines. For a considerable period he was with C. H. Swift & Sons, Utica, N.Y., wholesalers and manufacturers, and looked after the inspection of their hardwood stocks in Quebec. On his return to Toronto he became identified with the Anderson-Miller Lumber Co. in an inspecting and sales capacity in which he was engaged until August 1921 when he joined the inspection staff of the National Hardwood Lumber Association.

### New Sales Manager for Disstons

The appointment of D. W. Jenkins—better known most everywhere that lumber is cut as "Dave" Jenkins—to the position of sales manager in the mill goods department of Henry Disston & Sons, Inc., Philadelphia, calls attention to the career of a man who is well known in nearly every branch of the lumber industry.

He has had lumber and mill experience over nearly the entire country, from the Atlantic to the Pacific, and from Seattle down into the South. Many years ago, Mr. Jenkins started his business life as a manufacturer of lumber in Kentucky. Later, he joined the Disston organization—just about twenty-six years ago—as representative travelling out of the old Disston Louisville branch. When the Louisville office was consolidated with the present Disston branch at Cincinnati, he moved with the branch, and for three years travelled out of Cincinnati office. At the end of three years, he was transferred to the Disston general offices in Philadelphia and travelled out of there, covering territory in the middle west for the following four years.

### Logs are Subject to Timber Tax

In a Treasury decision made public, at Washington, D. C. Collectors of Customs are instructed to assess countervailing duties upon logs of varieties specified in the Forest act of the Province of British Columbia which are subject to a timber tax, whether the logs are cut from crown or private lands. The tax assessed by British Columbia follows: Two dollars per 1,000 feet, on No. 1; \$1.50 per 1,000 on No. 2, and \$1 per 1,000 on No. 3. It is provided by the act that all the tax over and above 1 cent per 1,000 feet shall be allowed when the timber upon which it is due or payable is manufactured in latter provision constitutes a restriction on exportation,

In these days of keen competition, QUALITY TELLS, and so far as Lumber is concerned we believe we can safely say we can furnish QUALITY combined with the BEST OF SERVICE.

At the present time we have a considerable quantity of

# 1" No. 1 Common Cedar

This is particularly desirable stock, being a SMALL-KNOTTED type and will make excellent Boards and Shiplap, also a good cheap Siding or Ceiling. Try a car and we feel sure you will be surprised at its superiority.

We also manufacture FIR and Spruce. As DIMENSION, our FIR be can strongly recommended, and GOLDEN SPRUCE already has a string of steady users in Eastern Canada.

Our sawmill, with a daily 10-hour cutting capacity of 200,000 feet, is the largest in the interior of British Columbia. We run all orders through the planing mill at time of shipment so that our stock always reaches you bright, clean and newly milled.

## EDGINGS

The J. D. Lutz Logging Co., Ltd., with a capital of \$100,000 is a recent incorporation at Vancouver.

T. H. Hancock Lumber Co., Bloor St., W., Toronto, are about to start work on a new dry kiln.

The McMaster Lumber Co., Ltd., Kemptville, Ont., recently suffered a loss by fire.

A large number of hardwood ties are being taken out on the Eastern Townships of the Province of Quebec for shipment to England.

Barrett Bros., general woodworkers, Ottawa, have completed their new sash and door factory and have installed a shavings exhaust system supplied by the Toronto Blower Co.

The Canadian Wagon & Novelty plant, Preston, Ont., was practically destroyed recently in one of the biggest fires. Preston has experienced in years.

F. O. Hodgson, of McGibbon-Hodgson Lumber Co., Vancouver, has bought out Mr. McGibbon's interests and the firm will now be known as the Hodgson Lumber Company.

D. Aitchison Lumber Co., Ltd., Hamilton, Ont., was recently granted a provincial charter with a capital of \$200,000 to manufacture and market all kinds of wood products.

A new saw and shingle mill and wharf at a cost of \$250,000 is to be erected at Port Alberni, B.C. The capacity will be 100,000 feet and two shingle machines. C. J. V. Spratt, of Victoria, is the principal.

Co-operation between the Federal Government and the provinces for the preservation of the forest wealth of Canada, is urged in a resolution brought before the House of Commons at Ottawa by Pius Michaud, Liberal member for Restigouche and Madawaska.

The Powell River Pulp & Paper Co., Powell River, B.C., is erecting a new boiler house, 115 x 130, which will contain twelve boilers all equipped with Dutch ovens and is so constructed that accommodation can be made for four more boilers if required.

The Seine River Improvement Co., Ltd., Fort Frances, Ont., is a new company recently incorporated to develop electric power on the Seine River and manufacture and market all kinds of forest products. Capital \$3,000,000.

Port McNeill Timber Co., Ltd., Toronto, was recently granted a federal charter to manufacture and market lumber, pulpwood and other wood products. Capital stock to be 1,000 shares without par value, provided the company shall do business with a \$5,000 capital.

It is expected that the new plant of the Provincial Paper Mills Co. at Port Arthur, will be turning out book paper by the first of next month. The mill is one of the best equipped on the continent and its construction was completed in record time.

Robert Little has been busy for some time sawing lumber on Bleeker Ave., Belleville, and has done a large custom trade with the farmers of the district. Mr. Little has now moved his outfit to Melrose, Ont., where he will continue operations for some time.

Fibre manufactured by the Laminated Material Company of New Westminster, B.C., is finding a ready market in the south, it is reported by Wm. Godfrey, manager of the Vancouver branch of the Bank of Montreal, who has returned from a visit to Los Angeles.

An inquiry from an English firm was recently received by the St. John Board of Trade asking to be put in touch with Canadian manufacturers of wood boards and mouldings, who would be prepared to manufacture certain special lines.

A. J. Hager of Lansing, Mich., who spoke so encouragingly to the Ontario retailers in convention at Windsor in January was re-elected president of the Michigan Retail Dealers Association at their annual gathering at Grand Rapids recently.

William Hughes passed away recently in Marmora village, Hastings County, where he was a well-known lumber manufacturer. He had been ill for some time and his passing is greatly regretted by a large circle of friends. L. P. Hughes, of Belleville, is a brother of the deceased.

The remains of the late Dr. B. E. Fernow, who for many years was dean of the Faculty of Forestry of the University of Toronto, and one of the outstanding conservationists of America, were cremated in Buffalo and sent to Ithaca, N.Y. It was the last request of Dr. Fernow that his ashes be sent to Cornell University where he was the founder of the Forestry Department.

The annual statement of the Wayagamack Pulp & Paper Co.,

was presented lately and showed satisfactory earnings for the past year. At the annual meeting held in Three Rivers, Que., recently directors were elected for 1923, among the number being Sir William Price. C. R. Whitehead was re-elected president for the coming year and James W. Pyke vice-president.

Charles Walmsley and Company (Canada) Limited, have opened an office in the Drummond Building, Montreal. Preparations are now being made for reopening the Longueuil plant acquired from Armstrong-Whitworth of Canada, Limited, and it is expected that operations will be commenced early in March. Newsprint machines ordered by Price Bros. will be built in the plant.

James A. Stewart, Limited, has been granted a charter with a capital of \$100,000 and head office in Port Arthur, to manufacture and deal in pulpwood, ties and all by-products of lumber and timber, and to own and operate timber limits, etc. Among the provisional directors of the company are F. H. Keefer, Hugh Keefer and L. C. S. Hallam, of Port Arthur.

The forestry departments of Price Bros. and other companies are making further investigations into the use of decayed wood in connection with the manufacture of pulp. One line of inquiry will be as to the possibilities of driving such wood, it having been found that a certain amount will sink. Another point is to how far it is economical to use the wood, having regard to the cost of cutting, driving, and the percentage of loss in the driving operations.

With a temperature of 32 deg. below zero, Mrs. Alex. Yells, wife of a lumber worker at River Valley, 30 miles from North Bay on the C.N.R. was awakened from her sleep recently by a dog tugging at the blankets on her bed when the house was a mass of flames. The mother and child managed to escape. The dog, to whose intelligence they owe their lives, paid the full price of his heroism.

F. B. Gregory, one of Collingwood's leading residents and a partner in the firm of Toner & Gregory, died recently in his 75th year. The late Mr. Gregory, who was born in Albany, N.Y., came to Collingwood 45 years ago and in 1881 he formed a partnership with the late W. T. Toner in the lumber business. When logs became scarce in that district the firm carried on a coal and wood business until two years ago when dissolution took place. He leaves a widow, one son and one daughter.

It is understood that the Dryden Paper Co., of Dryden, Ont., hopes to have an additional power plant and paper-making equipment in the near future when the concern will be in a position to improve its earning power considerably. 1922 was a fair year with the company, particularly the latter half but during the first few months the market for sulphate pulp, which is the chief product of the organization, was very dull, Scandinavian pulp having been competing in the United States market.

Robert P. Kernan, vice-president and general-manager of the Donnacona Pulp & Paper Co., Donnacona, P.Q., was recently married to Miss Alice Fitzpatrick, second daughter of Sir Chas. Fitzpatrick, Lieutenant-Governor of the Province of Quebec, and Lady Fitzpatrick. The ceremony took place in the private chapel at "Spencerwood." Mr. Kernan and bride left on an extended trip to the United States and on their return will take up residence in Quebec City.

The Bellingham (Wash.) Herald contains an account of a lumber and railway transfer from the McCoy, Loggie Lumber Company to the St. Paul and Tacoma Lumber Company, involving more than \$1,000,000. The late George W. Loggie was for many years president and J. A. Loggie, formerly of Loggieville, N.B., the secretary and manager for the former concern. Messrs. Robert and Francis P. Loggie, of Loggieville, and Andrew Loggie, of Dalhousie, are brothers.

The Sorel Terminal Co., Inc., Sorel, Que., is a firm recently incorporated with a capital of \$500,000. The new concern has leased a large tract of land at Sorel, Que., for transferring and stocking pulpwood. Immense shipments of pulpwood are to be made by barges through the St. Lawrence, Lake Champlain and canals to New York state and Vermont mills. The principals of the organization are Hon. John A. O'Connor, Senator W. T. Byrne and Hon. J. A. Dix, president, all of Albany, N.Y., and O. J. Klein of Campbellton, N.B., who is vice-president.

Word comes from Woodstock, N.B., that lumber operations in that province have been going on steadily. The sawmills of Flemming & Gibson at Juniper, N.B., and vicinity are all busy, employing about five hundred men. Although there has been a slight depression in the price of laths and lumber, the operators have every hope that the price will come back as spring approaches and that there will be a steady demand. The big slump in potatoes has been disastrous to the farmers, and dealers in farm machinery, fertilizers, automobiles, etc., are having a hard time making collections.

# Gates Furnace

## For Burning Sawdust and Hog Fuel

Gates Engineering Co. Ltd., 314 Notre Dame St. W.  
Montreal

*Will burn tan bark, hog fuel and sawdust efficiently, with up to 60% moisture*

Gates Air Cooled Suspended Arches

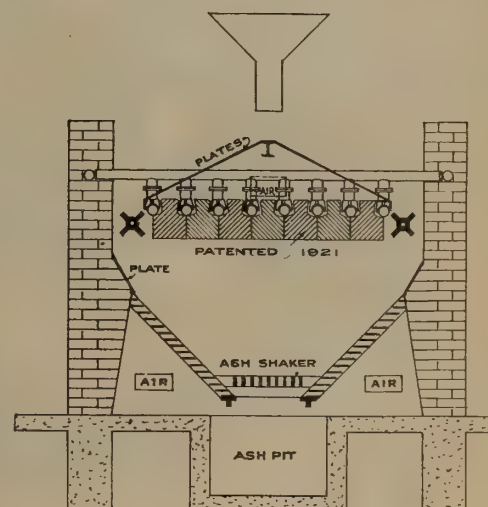

Boiler Door Arches and Jamb

The Water or Air cooled Suspension Arch, suspended over a furnace built with incline grates, to prevent the coning of sawdust and refuse material, combined with the automatic feed and drying chamber suspended directly over arch, absorbing the heat from arch roof which removes the required percentage of moisture from the material to be burned.

Note that fuel is partly dried before receiving air while passing over dry plate chamber at the lower edges, thence into combustion chamber space over the fuel bed. All ash is removed by stoking grate at the bottom of furnace.

All fuel sliding down the incline grates comes in contact with a special draft action, owing to the horizontal air spacing, through the incline grates on either side, the draft currents arrive at a focus of combustion in the centre of the furnace, causing the gases and flame to meet and roll towards the edges of dry plates, thus increasing the drying capacity, and thoroughly drying tan bark or fuel which is being burnt.

The blocks in these arches are supported independently of the other, allowing any one brick to be removed and replaced without disturbing any other portion of arch.

We specialize in Boiler Settings and Furnace Brickwork and give the benefit of (30) thirty years' experience. Ready to go anywhere to build new Boiler Settings and overhaul and Reset old Boilers and build Furnaces.

Linn Logging Tractor on operation of St. Maurice Paper Co., at St. Donat de Montcalm, Que.

# THE LINN LOGGING TRACTOR

The wonderful performances by the Linn Logging Tractors in operation on the limits of various Quebec and Ontario operations, have, so far, been witnessed by a great many interested operators.

On February 15th, an operation in the Laurentians (that of the St. Maurice-Paper-Company Limited), where two Linn Logging Tractors are operating, was visited by two representatives of an operator who has used tractors for several years and who has probably had the greatest experience in continuous tractor operation than any other Canadian operator: As a result of this visit, and the wonderful performance they witnessed, they have just placed their initial order for a Linn Logging Tractor, for immediate delivery, although they will have but twenty-five hauling days in which to use it—but with the Linn in their operation they will feel assured that they will get all their logs out.

As a result of their long tractor experience, the wonderful power and economy and reliability of the Linn is perhaps more evident than to an operator heretofore unused to Tractor haulage.

The end of the haul is fast approaching. A visit to a Linn operation will be valuable to you—and—no matter where you are operating, you have not far to travel to see a Linn in operation.

## A vintage steam-powered traction engine or portable engine on wheels. It features a large horizontal boiler, a tall smokestack at the front, and a complex arrangement of pipes and valves. The engine is mounted on four large, spoked wheels.

**Sylvester Manufacturing Company, Limited**  
LINDSAY      ONTARIO

# Making Good Today in Over Four Hundred Sawmills

OVER four hundred sawmill owners in Canada have shown their faith in this machine by installing it in their mills.

The Payette No. 1 Bolter and No. 2 Lath Mill will cut, count, tie and pile 128,350 laths in a period of ten hours. The above consisted of 4 foot laths,  $1\frac{1}{2}$  by  $\frac{3}{8}$  inches, and constitutes a record in rapid lath cutting.

Not only has this equipment made records for speed in cutting, but it has proven its dependability for continuity of positive operation over a period of time.

Do not purchase without first looking into our claims for the Payette Bolter. Get in touch with us.

We also manufacture the Payette Heavy Duty Saw Mill Carriage equipped with our latest Patent Payette Mill Dogs.

## P. PAYETTE & CO.

J. T. PAYETTE, Proprietor      PENETANG, ONT.

# Adams Gasoline Aligator Pointers

A big saving in time and money can be effected by the use of an Adams Pointer in your logging.

This powerful and efficient gasoline boat is built to give the service under heaviest working conditions and is proving its superiority over the large and more awkward craft and makes it the successful rival of alligators and tugs.

Send for data and prices

Above cut shows machinery that is installed in a 26'-6" x 6' Special Lumberman's Pointer

## Resurface Your Roof

A coat of Reed's Roofing Cement—Plastic, Semi-Plastic or Liquid—will add years to the life of your roof.

This cement is the result of over **Seventy Years** practical **Roofing experience**. It will not peel nor blister and is absolutely unaffected by climatic changes.

Easy and inexpensive to apply. Ordinary labour can be used with satisfactory results.

Special prices by the barrel—Ask for them.

**Geo. W. Reed & Co. Ltd., Montreal**

## WIRE ROPE

**"We have the Right Rope for every purpose"**

The contributing factors in making good Wire Rope are: 1. Men who know how. 2. The best grade of materials. 3. The most modern machinery. We have all three and are producing the goods. Give us a trial.

**We solicit your enquiries. Write for our catalogue.**

## Gerlach Modern Machinery Produces Cheaper and Better

Tight and Slack Cooperage Stock for Barrels, Kegs and Tubs, ready to set up into non-leaking packages of 5 to 120 gallons liquid capacity, or for semi-liquid and dry materials up to 800 lbs. weight. We manufacture machinery for sawing, jointing, planing and crozing staves; for sawing, jointing, dowsing, planing and circling heading.

### MODERNIZE YOUR PLANT

Scrap Machinery invented before the Civil War and install a Gerlach Outfit that will make Tight Barrels that are tight, from any strong non-porous timber.

### BUILD

Barrels with perfect joints that will not leak; a product that is infinitely superior to the tin and iron near barrels now being experimented with. Wood is tasteless, stainless and rustless and being a poor conductor of heat or moisture, keeps its contents in their original condition.

### CYLINDER SAWS RESTEELED

## Delicious! Economical!

Swift's "Premium" Oleomargarine is exceptionally good—it is made under such ideal conditions, and the ingredients are pure. Then, of course, it is made by experts who know how to bring out that delicious taste for which "Premium" Brand is famous.

Give it a trial. Your men will like it, and your cooks will find a hundred uses for it, too. And think how it will cut down your bills!

## Rubber Goods FOR LUMBERMEN

**Belting** Our long experience in the making of Rubber Belts enables us to specialize on this line. "P. M. S.," "Special Drive" and "Lion" are our leading brands for power transmission.

**Packings** "Redstone" High Pressure Sheet Packing has proved by test that it will outlast any other similar packing on the market. We make Spiral and Ring Packings, etc., that are equally reliable.

**Hose** for Steam, Water, etc., in various grades, made especially to give satisfactory and economical service under different conditions.

**Fire Hose** One or more of our twenty brands of Fire Hose will be found, not only in the best equipped Factories, Mills, etc., but in almost every Fire Department in the Dominion.

**Rubber Footwear** We make a complete line of Lumbermen's boots. For over 25 years, our Maltese Cross Brand has been the leading line in Canada. Make sure you get this old dependable brand.

# FIRE BRICK AND CLAY

We make several brands of fire brick by every known process of manufacture from a selection of various high grade Pennsylvania clays. This enables us to furnish the best for your boilers, dutch ovens, refuse burners, kilns, etc. We specialize in fire brick for power plants and if you will advise us whether your boilers are hand fired or stoker fired and kind of fuel used we can then give you the proper brick for your work.

We carry a large stock of our different brands in various sizes and shapes in our Hamilton warehouse which enables us to ship at once.

We manufacture the following well-known brands:

"Elkco Special," "Elk Steel,"

"St. Marys," "Keystone" and "M.D. Elk"

## **Horizontal Band Resaw**

Speed and economy in operation have been combined to an unusual degree in the “Long” Horizontal Band Resaw. This result has been attained by the improved design and construction embodying many exclusive features which find instant favor with millmen. These are described in one of our booklets, together with full particulars and specifications. Write for your copy today. You should have it on file.

### **A Few Popular Features of the “LONG” Horizontal band Resaw**

The feed works (disc friction type) is mounted on the side of one of the housings, placed high out of the way of dirt, etc., yet accessible and easy to operate. Paper friction is readily shifted by means of a crank, the contact being maintained by small hand wheels working against the rocking boxes in which the paper friction shaft is carried. This shaft is belt driven from the driving wheel shaft through flanged pulleys and there is a ready means of stopping the feed quickly by raising the tightener with an overhead cable which can be carried overhead to any position desired.

# Let Steam do Your Setting

The hardest worked employee in the ordinary Saw Mill is the setter. The handling of large logs calls for great muscular effort on his part, while his work on the smaller logs is almost equally laborious, as he has to put through a much larger number of them.

Every cut makes necessary a new adjustment of the log, which, in the absence of our Steam Set Works, is accomplished by a long throw of the hand lever. Before the end of his day's labor, the setter is usually exhausted. In many mills, the setter, because of the fatiguing nature of his duties, is not required to work for as many hours per day as the other employees.

All this is changed by our Steam Set Works, making the labor of the setter so much less arduous that he can do a full day's work. He is also enabled to set logs more quickly, thus increasing the number of cuts that can be made in a given time; and the lumber produced is materially improved in quality and regularity. Instead of the sawyer being kept waiting for the setter—the usual condition in ordinary saw mills—the reverse is true, and the setter is usually waiting for the sawyer.

It goes without saying that the main purpose of a sawmill is to produce as much good lumber as possible, at a minimum cost. As the cutting capacity of the mill depends mainly on the speed with which the logs are handled, the importance of an appliance which will shorten the time required to move logs into position for the next cut, is apparent.

The considerable saving of time effected by the use of these Set Works, together with the greater exactness in the thickness of the lumber thus obtained, accounts for the rapid adoption of this machine by mill men.

The considerable saving of time effected by the use of these Set Works, together with the greater exactness in the thickness of the lumber thus obtained, accounts for the rapid adoption of this machine by mill men.

## Quantity Production Lowers Manufacturing Costs

The demand for a medium priced—high-class motor boat has resulted in GIDLEYFORD sales far in excess of expectations. The Gidley organization is able to concentrate on quantity production on an unheard of scale, with the logical result—lower production costs.

This enables us to sell the GIDLEYFORD at a greatly reduced price, and we will maintain the quality that is represented by the combined names of Gidley and Ford.

GIDLEYFORDS will be allocated as orders are received and shipping dates arranged.

Price reduced to \$1250. F.O.B. rail or water, Penetang, Ontario. In Canada, Sales Tax extra.

**1923 Price—\$1250**

**GIDLEY BOAT COMPANY, LIMITED, PENETANG, ONTARIO**

# **“HAMILTON”**

## **Twin Circular Machine**

Above cut illustrates one design of Twin or Span Circular used for slabbing logs for the gang or for making ties. With this machine chain feed is used. We also manufacture other designs with steam or rope feed.

The chain feed circular shown above will slab logs 16 ft. long into cants from 16" down to 4" in thickness, and this style of feed meets with most favor from millmen.

The saw frames are adjustable by rack and pinion controlled by handwheel with locking device, and a flat scale marked off at the mill shows distance between saws at all times. Saws used vary from 42" to 50" in diameter.

A special centering device operated by 6" steam cylinder is used to place logs to best advantage on track before going through the saws and the slabs coming off behind the machine are taken care of by means of chains or rollers.

The drive for feed chains which is variable is controlled by Sawyer and can be stopped or started at will.

Standard length of track supplied when cutting 16 ft. logs is 56 feet.

## Good Will

—a mighty valuable asset to  
your business and something  
that cannot be built up in a  
few days. It is the result of  
painstaking efforts to give the  
customer just a little more  
than he expects—keeping the  
quality of your products  
standard—and backing up  
every word of your advertise-  
ments. In short, it's Service  
—Real Service—that builds  
Good Will.

## A Permanent Lumber Service

**A**FTER several years of inactivity we are now cutting on our modern fully equipped mills at Manistique and Little Lake, Upper Michigan. The timber behind these mills was purchased many years ago by the Stack interests from the then "unlimited" supply. Its quality, particularly the maple and birch, is the envy of northern mill men among whom this tract is famous.

This timber will run the mills to full capacity for fifteen to twenty years. The 40,000,000 feet annual cut will run:

15,000,000 ft. maple annually  
6,000,000 ft. birch annually  
2,500,000 ft. beech annually  
2,500,000 ft. elm annually  
900,000 ft. basswood annually  
200,000 ft. ash annually  
6,000,000 ft. hemlock annually  
3,000,000 ft. white pine annually

the balance in Spruce and Tamarack.

Our exceptional service, grades, and manufacture will be maintained.

"Low freight rate shipments by water to Toronto, Montreal, Owen Sound, Port Arthur, and other Great Lakes and St. Lawrence River Ports. Conveniently located also for rail shipments to inland points by C.P.R. or Soo line."

We will be pleased to hear from old friends and from new ones who can understand and appreciate what permanent connection with such a source of supply would mean.

## Long-Bell Hardwoods

Logs from our own virgin forests.

Each log selected and cut for the purpose for which it is best adapted.

Class of timber producing excellent widths and lengths.

Manufactured in our own hardwood mills, equipped with modern band machinery.

Manufacture supervised by experienced hardwood men.

Thoroughness given every detail of manufacture.

Particular care given to uniformity of thickness—carefully edged, equalized and trimmed.

End-buttressed with mitre toothed saws.

Carefully sorted at chains.

Drying yard arranged to give thorough circulation to stocks in pile.

Every detail in sticking and drying carefully observed to insure best results.

Experienced inspectors grading lumber for shipment.

Double check inspection at cars in loading to insure uniform grades.

Same care exercised in loading in car as in manufacture.

Easily identified by the Long-Bell trademark on the end of every board.

# BUY BRITISH COLUMBIA Red Cedar Shingles

The life of a British Columbia Red Cedar Shingle Roof can almost be gauged by the life of the nail with which the shingle is nailed in place. Judging from available data, the average life of the ordinary steel wire nail, which has been in such common use, is only from seven to twelve years. Some wire nails will last longer, depending upon the condition of exposure, climate and similar features, but considering our climate as a whole, at the end of from seven to twelve years a large percentage of wire nails will have rusted either completely through or so extensively that the first strong wind will complete the work. The shingles that have been held in position by such nails are then free to work down, permitting rains or melting snows to leak through and damage the interior of the structure. Examination will disclose that the fibre of the shingle itself is still in perfect condition, and a leaky roof, in the majority of occasions is due entirely to the use of faulty nails, but the average home owner, placed at such inconvenience, will not stop to reason this out and the poor wooden shingle comes in for more unjust abuse.

There are several kinds of nails which experience has proven will give lasting satisfaction, and the wise dealer will advise his customers of these satisfactory nails. A pure zinc shingle nail meets all the demands of durability required. Its principal drawback is its high cost and a slight tendency to bend under careless driving. Galvanized wire nails theoretically are rust proof, and if the galvanized coating is properly applied, and of sufficient thickness, such a nail will last as long as the shingle it holds in place. The life of this shingle roof, properly applied with these nails then is from 40 to 50 years. Pure iron nails, or the old cut or wrought nails are ideal but difficult to secure. Copper nails also constitute a perfect shingle nail.

## Canada's Banner Province — A Land of Opportunity for the Lumberman

Forty per cent of Canada's total timber output is produced in Ontario. Last year's cut valued at \$26,774,937 was composed of 20 kinds of wood, chief of which was the famous White Pine.

The lumber industry of Ontario in camp and mill provides employment for more than 17,000 men, with a payroll of \$12,000,000, and an invested capital of \$45,000,000.

Ontario's woodworking industries are keen buyers of Ontario's lumber, and eighty-two per cent of the wood thus used is purchased within the province.

But the significant fact to lumbermen is that the bulk of Ontario's forest resources are as yet untapped. Rich rewards await the man with the initiative to develop these resources to the full.

Maps will be furnished and every co-operation given to those interested. Apply to the Department of Lands and Forests.

Issued by

**Beniah Bowman**

Minister of Lands and Forests

Panoramic view of the Provincial Forestry Station in Norfolk County. On the left is shown the first planting of Scotch and Jack pine on a low sand ridge in 1909. These trees are now about 24 feet high. In the two centre views are seen the headquarters building and the seeding beds with lath screens for shades and overhead pipes for watering. On the right are Larch and Scotch pine, being planted in 1911 and now standing 20 feet high. From material supplied by the Ontario forestry station, plantations have been started in nearly every county all over the province.

## MANUFACTURING COMPANY'S PLANE KNIVES

ESTABLISHED  
1832

Will cut two or three times as long on hardwood or hard work. The Simonds Welded High Speed Steel Knife is a new knife. Made by a new process and successful in every respect. It has a cutting edge of High Speed Steel Welded to a soft backing. When we say "Welded" we mean just that—not brazed as has heretofore been the method in making Carbon Steel Knives. This knife promises to be a big money and time saver for knife users. There is no change in machines required to run this knife. Simonds High Speed Steel Knife will last from three to five times longer than the ordinary Carbon Steel Thick Knife.

*Investigate this knife. Write today.*

Vancouver, B.C.

Above: Every strand of Link-Belt Chain is tested under load before shipping.

Insert: The Link-Belt Laboratory. Years of research and experiments have enabled us to reach and maintain the high Link-Belt standards.

Showing stock of chain at one of our warehouses.

### HERE'S WHY YOU SHOULD USE LINK-BELT CHAINS

EVERY strand of Link-Belt chain is not only made from the best materials, but is inspected and tested under load for strength, and uniformity of pitch.

Uniform high-tensile malleable iron castings—hard smooth pins—hard smooth cored holes for pins—generous wearing shoes for dragging—uniformity of pitch,

giving good sprocket action. These are reasons why Link-Belt Chains wear longest.

Measure values in length of service, and you will find that Link-Belt Chains are cheapest in the long run.

This  mark identifies genuine Link-Belt Chain.

## How Leading Operators View Outlook in Lumber Arena and Analyze Conditions of Past Year —Comprehensive Survey of Industry

"Good," "bright," "fair," "very good," "splendid," "encouraging," "fine," "promising," "more inquiries than at any time since the war," "much better than the past two years," "steady, profitable business," "expect good call all season as stocks are depleted," "volume should be greater with prices slightly better," "normal conditions with steady demand," "excellent with better figure," "twenty per cent higher prices," "believe that values will be fifteen to twenty-five per cent more," "good, active demand, cost are higher," "much better future than 1922," "greatly improved as outlook is bright," "conditions could not be much better," "stocks very low and badly broken," "likely to be decided shortage in some lines," etc.

These are some of the terse expressions which are made by representative lumber men in divers parts of Canada with respect to the trade outlook for 1923. In the preparation of material, for the annual Statistical Number of the "Canada Lumberman," scores of questionnaires were sent out to millmen in various sections of the Dominion in order that a complete expression of opinion might be obtained with regard to the present status of the industry and the prospects for 1923. Responses have arrived in goodly numbers from operators large, medium and small, and not a few sound a warning note against the menace of a runaway or speculation market.

While production and demand may have varied appreciably in different localities yet, on the whole, 1922 was a fair year and trade was encouraging during the last three or four months. This is the consensus of eighty per cent of those who have been kind enough to favor the "Canada Lumberman" with their views on conditions in general. It is also agreed that stocks are much lower at this period than they were twelve months ago and there may be a shortage in several widths, thicknesses and lengths before the 1923 dry cut is ready for the market. Some wholesalers are predicting that lumber will in certain districts be shipped green from the saw.

The one outstanding feature is that optimism and confidence characterize practically all the operators, and while it is not possible to give figures in many instances, the winter cut at several points has been larger and the log output this season will be greater,—all the way from twenty-five to fifty per cent

### The Lumberman

By Marjorie Pickthall

Around the crashing axes gleam,  
The sharp white splinters fall and fly,  
The leafless woods lie still and dream  
Beneath the far-off winter sky,  
The birds are silent in the brake,  
The lonely glades are white and fair,  
But all around the echoes make  
A myriad voices in the air.  
When swift the forest giants fall  
The snow in show'rs is shaken down;  
The chips are scattered over all  
And hide the leaflets sere and brown,

On every hand the forest sighs,  
And slender beeches shake with fear  
When low the fallen monarch lies  
With broken shrubs that flourish'd near.  
When trees grow greener every day,  
And robins call from every dell,  
We lay the gleaming-axe away  
And bid the forest-world farewell,  
Yet when the summer breezes sigh  
We dream, perhaps, of glittering snow,  
The glorious realms of blue on high,  
The trackless wastes of white below.

ahead of last year. This does not mean, of course, that more timber is being taken out than three or four years ago when things were at their zenith, or that, this year's cut in the bush will equal that of 1919-20, but it will, certainly, top that of last year.

Another encouraging feature is that inquiries are more numerous and far-flung. The feeling is in the air that lumber is a commodity which can be and will be readily disposed of and will not have to be peddled, unloaded or dumped on a patron the same as it was in the early spring of 1922 when getting rid of the heavy stocks on hand at a sacrifice was a most pressing problem.

The great trouble to-day is to get the stock required, and no little difficulty is being experienced at several shipping points. It has been well said that it is much easier at present to sell forest products than it is to get a supply. Those, who have a considerable lot on hand are hanging out for stiff prices, while many 1923 cuts have already been sold at a considerable advance. Operators contend that they must get ten to

twenty per cent more than they received last year in order to cover the increased cost of logging operations, which, they maintain, runs all the way from five to fifteen per cent more, due to increased wages, shortage in supply of lumberjacks at the beginning of the season, and the upward trend of overhead in general.

### Getting Ready for Early Start

With the exception of certain districts in Nova Scotia and New Brunswick, where the snowfall was very deep and the severe weather militated against hauling and yarding, the past winter was an almost ideal one in Ontario and Quebec for bringing out and skidding logs. If the spring shows a gradual and seasonable opening up, there is no doubt that many plants will get under way the latter part of April, which will be some weeks ahead of last season when it was well on into May or June before the big lumber mills started sawing. Every precaution has been taken this year to get out an ample supply of logs and, with few exceptions, every producer will seek to turn everything he can turn into finished lumber.

Building prospects are looking exceptionally well, excavations are starting in early and there is, apparently, no structural let-up in the larger centres of population. The suburbs of large cities are also growing more rapidly owing to the attractive types of homes which are being built and the conviction, which is becoming more widespread every year that the most contented, happy and prosperous people in any community are those which own their own homes and take a pride in a garden spot, in a well-kept lawn or in beautifying their surroundings. As long as home-building continues, there will always be good business for the retail lumberman. He is a community asset and renders a service distinct from that performed by any other member of the body politic. The retail dealer, certainly, is a force and factor in every progressive centre and his standing in the community and record of assistance and achievement are attributes that cannot be denied. However, this is not a dissertation upon the vocation and worth of the retail lumberman to the community, but after all he is the great distributor and through him much of the cut of each year finds its outlet.

All manufacturers agree that the volume of trade in 1922 was greater than that of the

previous year and that the profits, if any, were considerably better. Prices when considered on the whole, were better than the year previous, during which period old stocks had to be worked off and a heavy loss taken in several cases. Of course, there are some exceptions to this general statement, as it takes all kinds of people to make up a lumber world the same as any other industrial arena.

One of the difficulties during the last few months has been the car situation which made it impossible to send forward large consignments of lumber to the United States. However, this state of affairs is being gradually remedied and the numerous complaints, which have come particularly from the East are less than they were.

#### How the East Views Matters

From the provinces of Nova Scotia and New Brunswick come many expressions of opinion regarding the future. It is not possible to publish all these but a few extracts will be submitted.

One New Brunswick man says that he made no profit on timber transactions in the last two years owing to the market slump and the amount of English-bought deals that remained unsold, the uncertain European situation and the general air of restlessness and perplexity throughout the world. Referring to 1922, he says that trade opened strong with low prices, but these gradually strengthened. Concluding, the president of the organization says,—“The cut here will be double what it was last year, but still it will be thirty per cent under normal. 1923 looks like a fair year.”

Another eastern operator remarks “Business in 1923 will be good if the European situation clears up. Stocks are only about fifty per cent of what they were a year ago and the past twelve months was largely a clean-up period. There are no large stocks in the country and the log cut is light. Nova Scotia bringing out only about 100,000,000 feet and New Brunswick 400,000,-

000 feet. Business is good in the United States and why should not lumber bring a good price.”

Another eastern operator observes “Trade with the United States is good for all kinds of lumber and more so if anyone is in a position to dress his entire product.”

“Every day in every way the market is getting better and better; but it will have to go some yet to enable us to operate at a profit,” declares another large concern. “As prices receded early in 1922, the tendency was to cancel. We got out very few logs last winter and are getting out a normal crop this year and we look for a splendid twelve months.”

A large firm in Campbellton says,—“Our stocks are fifty per cent less than last season and our log output this winter will be fifty per cent more. There is a good demand for frame stock; lath is good with prices trending upwards. The cost of production is also increasing, which will have the natural effect of keeping the prices moving upwards so long as the demand keeps good.”

A Nova Scotia operator says,—“Our log output will be three times greater than last year and we look for a steady, profitable business in 1923. We made no profit either in 1921 or 1922, but last year our loss was not as great per thousand as the previous year. Our stocks are very much smaller than a year ago. Production costs are higher than anticipated due to excessive snow. Prices are improving in the American market and holding steady in the English market. Nova Scotia production in 1923 will be about 100,000,000 feet.”

Another Nova Scotia firm says that its log output will be one hundred per cent greater than it was a year ago and all old stock has been pretty well cleaned up. The volume of trade in the last year was greater than that of the one previous. Everything looks bright for 1923.

A Quebec concern says lumber is costing more to cut this season on account of the

increases in wages to men. “We are also having an extremely hard winter, lots of snowstorms, which are adding to the cost of hauling logs to the streams.”

A leading operator in the Restigouche district says that prices should average about ten per cent above those in 1921. The volume of trade last year was greater than the previous year while the market in the United States was active but shipments were marked by car shortage. It is believed that the log output will double that of last season. This manufacturer concludes,—“1922 production costs were below those of 1921, for which I am thankful. The trend of the market is upwards and we look for a strong demand, at least until the 1923 sawing is ready for shipment.”

Another opinion of interest is from Magog, Que., and the writer says,—“We expect a fair demand for lumber to be manufactured into auto bodies, furniture, etc., but local building will be dull owing to the emigration of so many French-Canadian families to the United States.”

A large operating hardwood firm states that with normal conditions a steady demand should characterize 1923, with prices about twenty per cent higher than they are at present. Stocks are about twenty per cent lower than last year. Production costs are too high at the present time in the lumber business, and this, coupled with the present market, has rather a tendency to discourage building.”

Many more quotations could be given upon the situation in the East. Various phases of the industry are presented in special articles elsewhere in this issue, and it may be said that, on the whole, except in isolated instances, everyone believes that business will get “better and better” and stay in that condition, for several months’ if speculative prices and a runaway market do not prevail.

A Northern Ontario man says “Operations in the bush this winter have been very favorable. Wages are about twenty-five

## Possibilities of the South American Lumber Market

By B. S. Webb, Buenos Aires  
Canadian Trade Commissioner

In Argentina, the business of importing lumber in cargo lots is restricted to a comparatively few firms. In order to import lumber successfully on a large scale, a sound, practical knowledge of the market and the classes of lumber which it demands are required together with ample capital for financing purposes and freighting cargo lots. Facilities for storage and distribution at this end are also necessary, and it follows that the number of firms possessing all the above requisites cannot be very large. Before the war there were some six or seven old-established houses in the business which more or less monopolized the entire lumber trade, but the business of these old-established houses has been interfered with and made less profitable by the operations of a number of new cargo-lot importers and a great increase in the number of parcel-lot importers.

At the present time there are twelve houses which can be described as first line cargo-lot importers, and in addition to these are two or three second line or occasional cargo-lot importers. A first line importer is understood to be one capable of handling a cargo a month, possessing a yard for receiving lumber, and purchasing through established New York or London connections on documentary sight letter of credit terms, or by special arrangements with London banks. Important lumber transactions are usually consummated in

London or New York between the New York and London connections above referred to (who act as purchasing agents) on the one hand, and the London or New York representative of a lumber exporting house on the other; rarely, if ever, do the purchasing agents negotiate direct with individual mills. Four of the first line importers have special arrangements with London banks for financing their purchases, and the remaining eight, almost without exception, pay for their purchases by a documentary sight letter of credit, which means that the North American correspondent of the importers’ bank pays cash to the shipper in North America in exchange for shipping documents which are endorsed over to the importers’ bank in Buenos Aires.

Cargo-lot importers almost invariably endeavor to sell their lumber “to arrive,” with the idea of securing a quick turnover, even though the profit be smaller. That portion of the shipment which is not sold “to arrive” is taken into the importers’ yard, and sold to local timber yards and wood-working establishments, of which there are some fifty or sixty in the business. The cargo-lot importer will not, as a rule, sell less than 30,000 ft. b.m., and almost invariably sells on terms which, of course vary according to the financial responsibility of the buyer. The distribution of lumber in Buenos Aires is hardly ever a cash transaction.

per cent higher than last year. The cost of production is going to be more than last year. The early part of the cutting season was bad as men were very unsettled."

Another concern writes that prices for 1922 were about eight per cent higher than they were in 1921. The log output in 1923 will be fifty per cent over that of a year ago, and the cut last year showed an increase of twenty-five per cent.

"Our log output will be about one-third of what it was," declared a Western Ontario lumber firm. They consider the prospect for the coming year is very good. Their cut for 1922 was about twenty per cent more than the year previous. Another firm says that their log output will be about three times as much as the previous year.

#### Wages were up Considerably

An organization in the Midland district says that 1922-3 wage costs are up about ten per cent more than during the previous year. This is partly offset by a reduction in the cost of supplies. The log output will be fifty per cent ahead of what it was last year.

An operator doing business along the T. & N. O. Railway says he could have sold more lumber if he had had it. He looks for a fair demand from outside points, around \$30. to \$35 per M for jack-pine and spruce.

"When you speak of profits," say another firm, "and ask how those of 1922 compared with those of 1921, we consider that the best reply is that 1922 simply paved the way for the manufacturer to sell his lumber in 1923 at a price in keeping with the cost of production. Our log production will be about twenty-five per cent more than last year, and our trade with the United States was very good. The volume was larger, profits higher and we have less material unsold to-day in our yard than we have had for many a long day."

Another firm in the same district have practically the same story to relate, declaring their log output will be twice as much and all their stock is cleared out. They believe 1923 will be a bright year in the lumber business.

In the district of Kenora, one concern replies that trade was thirty-five per cent greater last year than in 1921, profits twenty-five per cent higher and prices twenty-five per cent higher. Stocks are declared to be fifty per cent lower, and, it is believed, that 1923 business will be at least, sixty per cent better than it was in 1922. The firm adds that the peculiar conditions, which characterized trade with the United States, were a reduction in freight charges and no sales tax on lumber for export.

#### Active Market and Better Prices

"We believe it will be much easier to dispose of stock during the coming season than it was, and our output of logs will be twice as much as a year ago. Woodsmen's wages were somewhat higher this year than last, and more logs and pulpwood have been cut in this section than have been for some time past. The cost of production has been higher, so far as logs are concerned, by about fifteen per cent, and we believe that manufacturing costs will be about ten per cent above those of 1922. We hear that mill labor will not be so cheap this year and there will be an increase of fifteen per cent," concludes a Northwestern Ontario man.

"Good active demand, with better prices, with an increase in our log output of fifteen

per cent, sums up our view of the situation," says another New Ontario firm.

When asked how about log production and what the outlook is for 1923, one Georgian Bay manufacturer gives the following:—"100 per cent increase—wish I knew."

Another firm say that wages this season, so far as they are concerned, will run nearly forty per cent higher than last year, but supplies are cheaper, especially feed.

"We are taking out about four times as much timber as we did a year ago; our profits in 1922 were greater in volume than they were the year previous. We think prices will be slightly improved during the coming few months," says a well-known North Shore lumber concern.

By taking up a number of questionnaires at random and giving an excerpt or two from each, a comprehensive picture of the situation is presented.

Here are half a dozen offhand opinions from different parts of the country:—

"Our cost of logging is about the same as last year, but we feel that things are now on the mend in the lumber line."

"We believe the trade outlook for 1923 is much better. Markets on the good ends of hardwood have got to be good on account of grades now being taken by licensed scalers. They are a very little better than robbers."

"We have very little stock on hand and our output for the coming season will be

#### The Record of Canadian Trade

	1922	1921
Total Trade . . . .	\$ 1,650,022,223	\$ 1,601,878,617
Total Exports . . . .	884,318,008	802,714,926
Total Imports . . . .	765,704,215	799,163,691
Grain Crop . . . Bus.	897,283,100	860,532,641
Wheat Crop . . . Bus.	399,786,400	300,858,100
Value of Crop . . . .	\$ 962,616,200	\$ 931,863,670

double of last. Prices were \$2 to \$3 per M higher last year than they were in 1921. The volume of trade was greater."

"1922 and 1923 cost of production will be somewhat less than 1920-1," says a concern which gets out a large number of railway ties. "Our company was not operating in 1921 and 1922 on account of being no market for ties that year in this vicinity. Reduction in costs and operation was more than offset by the decrease of prices for ties. Softwood prices were, on the average, about \$5 higher in 1922 than in 1921, while hardwoods ruled about the same."

"Woods operations for this season will show a cost of thirty to thirty-five per cent more than a year ago. Our cut will be seventy-five per cent more and we look for a fair demand and gradually increasing prices."

"The demand is very heavy at the present time for lumber, and prices on culls are likely to be forty to fifty per cent higher and merchantable about twenty-five per cent. Logging costs for 1923 are up from twenty-five to forty per cent owing to higher wages and inferior labor. There is about fifty per cent less material in our yard than a year ago. Our log output will be about the same as last year. Conditions just now seem very good."

#### His Log Output Will Be Double

One managing-director of a large concern in Northwestern Ontario, who has given the whole lumber situation, past, present and future, careful consideration, says,—“Our volume in trade in 1922 was greater than that of the year previous and

our profits were better, while prices were a little higher. Our stocks are smaller and trade with the United States was favorable during the last few months. Our log output for 1923 will be double of what it was a year ago, and we look forward with no small measure of confidence to the results of the present year. Wages in the bush this year, so far as our own activities are concerned, average about \$35.40 as against \$26.32 last year. There was a sufficient amount of labor, provisions were slightly higher than in 1921, but hay and oats were lower. We anticipate a good demand for lumber and lath, and expect to pay more for mill labor this year. There may be also a shortage of common labor in certain districts."

#### Low Prices Accepted to Clean Up

A large eastern firm who have mills in Quebec, New Brunswick and Maine, and are in a position to size up trade conditions on both sides of the border, say,—“The years 1921 and 1922 are difficult ones for us to compare as we operated one mill only a few days in 1921 and were only able to make late starts with our other mills in 1922, due to heavy stocks piled up in our yards which made new sawing impossible. We usually operate three mills from April 1st to December. During the winter of 1921-2 we did not cut any logs, while this winter we are making a cut of 5,000,000 feet. This, along with present stocks, will keep the two remaining mills in full swing over the coming season."

"In regard to prices, as a whole there is a slight improvement though in some lines there is a marked decline in specially prepared stocks, such as long average wide deals. Prices are now strengthening and we look for a steadily-improving market in the United States and South America."

"Pine lumber is very scarce and is bringing a higher quotation. We shipped some 11,000,000 feet more in 1922 than we did in 1921 but the total value was not proportionately greater due to the decline in price on long broads and low prices accepted to clean up old stocks and allow us to start our mills."

#### Expects Banner Year By Fall

Another representative of a leading firm in Ontario, west of the Sudbury district, on the Canadian National Railways, presents some timely information regarding activities of the past year and says that their log output this winter will be three times what it was last. He believes that 1923 will be a banner year by the fall months.

"A personal interview with owners of operations in Canada and the United States, who know conditions across the continent, convinces me that the market is very bare of unsold dry stocks, and there is a heavy American building programme. It looks as if there will be a marked scarcity of dry lumber by May. We are holding a few million feet in our little yard. In quoting prices on dry stock for this year's cut, we have been offered \$7 over last year but we believe that we will get more than \$10. It is our turn now to make a little money in order to offset the losses with which we came in contact during the last two years. We are hoping for a steady market but cannot stop the present up-curve of the American business cycle. On account of easy credit conditions, we are likely to go on expanding for a couple of years. Then absurd manufacturing and building costs owing to the scarcity and demands of labor, will halt American optimism."

# Northern Ontario and Georgian Bay Output

*Considerable Increase in Amount of Lumber Sawed Last Year—Lath Production also Shows Gratifying Gain—Bush Operations Conducted on Large Scale This Winter*

The production of lumber is on the up-grade and things are now veering in a new direction. Everything points to an increased output during the coming year and mill operators will, in most instances, run their plants to capacity. For a number of years now with one or two exceptions the "Canada Lumberman," in its Statistical Edition, has reported a decreased cut but the tide has now changed and production is once more in the other direction. Various phases of the industry, the opinion of manufacturers regarding the future, the difficulties they were up against during the past year, the dangers which may result in 1923 and a general survey of the forest products situation is presented in other pages of the "Canada Lumberman," and will be well worth perusing.

The past twelve months have seen much change for the better in trade especially when compared with 1921. Last year the mills in the Northern Ontario and Georgian Bay districts reported a big decrease in their 1921 cut. At that period trade was practically at a standstill and many operators could not see their way to expand. Others who did go into the bush, cut only about 50% of normal.

The season of 1922 while by no means a world-beater, was, certainly, much better than 1921. Trade started to pick up early in the year when Canada entered upon one of the biggest building eras in her history.

Profits, while still small, were made and in very few cases did the mills sell at a loss. The cost of supplies was slightly less and labor costs were somewhat reduced. 1922, as one millman puts it, simply paved the way for the manufacturer to sell his product at something approaching a profit in 1923.

It can now be clearly seen that 1922 was a recovery year and incidentally bargain day for those who took advantage of it and started to build. Consumers recognizing price-cutting as the symbol of liquidation, started in on their long delayed structural programmes at the comparatively cheap prices. It did not take long before the surplus stocks in the country were depleted, and, at the present time, stocks on hand are very much reduced. In fact there is a scarcity of dry lumber right now which will be felt until May of this year. Prices during the latter part of 1922 were from \$2. to \$6. higher, which helped the manufacturers to break even, at least.

Prospects for 1923 are the most encouraging that have faced the manufacturers in two years. Operators estimate their cuts this season to be from 30% to 50% more than in 1922. In some cases 75% more lumber will be manufactured this year than in 1922. Everyone is hoping for a firm, market and it certainly looks like a steady year of building if the number of building permits already taken out is any criterion.

The lumber production, which includes hard and softwoods for 1922 showed an increase of 55,260,000 feet over 1921. This is quite a difference from the decrease in last year's figures and gives a fair idea of how augmented demand influences a larger supply.

Lath also figured in the activities, the cut for 1922 being 218,390,000 pieces. The gain over last year's figures for lath was 35,270,000 pieces. While these increases in lumber and lath production are not great, the demand is growing daily and manufacturers will seek to meet it.

The following statistics and reports were obtained through the courtesy of the operators of Northern Ontario and Georgian Bay. In certain instances where returns have not been sent in promptly, estimates have been made for the cut in that particular district, based upon past year's figures. Manufacturers as a whole were, however, very kind and co-operative in the matter of sending in data relating to their cuts. The "Canada Lumberman" desires to thank its many friends for their timely assistance in securing returns from such a wide territory.

# THE LUMBER YARD AND FOREST IN PICTURE

A happy group of ladies snapped in front of the Prince Edward Hotel, Windsor, Ont., on the occasion of the retailers' convention held recently in that city.

A scene at the headquarters camp of W. C. Cochrane, Sudbury, Ont. The camp is located along the Canadian National Railways.

General view of the new wood room, conveyor system, wet machine room and grinder room of new pulp mill of Backus-Brooks Co., at Kenora, Ont.

This picture taken at Windsor, Ont., during the big retailers' convention illustrates a unique method of hauling lumber. The first tractor is shown pulling a 5-ton semi trailer; the second shows a 3 ton, 4-wheeled trailer and the third one a 2 wheeled lumberman's yard cart.

Boys in the bush enjoying a mid-day snack at Windy Camp on the C.P.R. in Northern Ontario

Canada Creosoting Co., Limited, Sudbury, Ont., showing 1,300,000 railway ties awaiting treatment. The ties are piled about 8 to 10 ft. high in streets.

# Production in the Ottawa Valley Increases

Substantial advances in regard to the output of the lumber manufacturers of the Ottawa valley took place during 1922 according to latest returns made by the various mills to the "Canada Lumberman." The production of lumber increased by over sixty three million feet; lath by more than twenty three million pieces; and shingles by over ten million pieces.

For the first time since 1918 the lumber production went above the three hundred million mark. The lath output was the largest since 1915, and the shingle field was the heaviest in the last eight years.

Production figures showed, lumber 301,980,268 feet; lath 79,140,000 pieces, and shingles 38,180,000 pieces. The increase in lumber production as compared with the 1920-21 season was 63,863,504 feet; lath 23,551,650 pieces, and shingles 10,332,000 pieces.

The volume of trade during 1922 was generally greater than in 1921, and prices and profits if anything were on the whole better last year than they were in the preceeding twelve months. In the increased volume of trade the returns showed little difference, but, on the price and profit question, there was considerable disagreement. Some manufacturers said they had got fair profits with the amount of trade, while others claimed there was only a fair volume of trade but less profits.

Existing stocks by the returns of the mills are hard to judge, and it is problematical whether or not the stocks in the hands of the lumber manufacturers of the Ottawa valley at the present time are any greater than a year ago. The chances are if they are any greater than during a corresponding period in 1921, that the margin is small. Reports show the existing stocks of some companies are lower by fifty per cent than a year ago, and still there are other companies saying they are not operating.

A general survey of the existing situation as gauged by information contained in the returns from the firms, inclines toward the belief that there will be a greater log production this winter. Rumor whispers there is good business ahead, that 1923 should show a strong advance over 1922 sales, and that prices if anything will range from firm to higher.

The opening part of the year 1922 was not a good one so far as prices compared with existing value of stocks concerned. The market was spotty, but some sales agents of manufacturers exercising an almost uncanny insight regarding conditions, held back until wholesalers had to buy. This was especially true of the United states trade.

During the latter part of the year prices began to get better, especially to the American market. Apparently no sooner had a better value situation applied itself, than along came a flock of embargoes from American entry ports which correspondingly sent business on the "hummer."

The embargoes still exist, and if the American railways, through their officials do not get the tracks cleared and provide rolling stock and transportation facilities, to forward Canadian lumber shipments, there is liable to be an acute shortage of stocks in the north eastern American yards this spring.

Several orders subject to shipment and delivery have been placed but the shippers through the operation of embargoes, have been unable to make the customary delivery guarantee on a specified date.

The woods labor situation, while satisfactory so far, is one of considerable doubt for coming operations. Returns for the 1922-23 season show that production charges were higher, the margin ranging from five to twenty five per cent.

At the outset of the fall operations the camps were partly filled; then they were filled; next the men made a vacation to somewhere or another; and a shortage occurred which resulted in help having to be brought in from Gaspé. The Gaspé men in the main did not live up to the job, and many of them quit later. They had to be replaced with consequent higher operating costs. Shortly after New Year's the camps got back to somewhere near their normal stride, and production travelled on. Early in March, however, the "spring" exodus took place, but fortunately some woods managers, surmising what was about to happen, had other gangs, in reserve, and kept the work going.

As gauged by returns and published figures, the production of the Ottawa valley mills for 1922, and other years was:—

## Lumber Production

# Quebec Thinks That Business Will be Better

*Leading Exponents of Industry Look for Twenty-Five Percent Increase over Last Year.—Some Features of Trade and Interesting Statistical Returns*

With the exception of a few cable messages, no letters to indicate the present condition of the United Kingdom markets and the prospect for sale of Canadian lumber and timber for the coming season of navigation have at time of writing been received from the representatives of the Quebec export firms who sailed in the latter part of January to take observations and solicit orders in the British Isles. In the meantime the advices received by the Quebec lumber firms from the British agents are not altogether encouraging, though in no sense pessimistic. The crux of the situation is due to the unsettled political conditions of Europe and the depreciation of currencies.

Expert economists in all branches of commerce in England, including the leaders in the lumber industry, consulted in February, expressing their views generally on finance and trade, and the prospects for the year 1923, advise caution and avoid predictions of the future. It will be gauged by such expression of opinions by men who as a body are the most unbiased of any class in the commercial world, that too much dependence cannot be placed by the Canadian lumber trade on the United Kingdom markets for the first six months of 1923 at least.

In the meantime a careful telescopic survey of the industrial conditions in England, causes the experienced business men to conclude that there are positive indications in the direction of greater activity and of greater earning power, but, at the same time, a warning that this could not proceed very far in the present disturbed condition of Europe. It is pointed out by the philosophical and mathematical business experts in England that the French action on the Ruhr from a commercial standpoint as well as a phase of trade from the international point of view, Great Britain is of all nations the most dependent on foreign trade, and if for some special cause this home consumption may be increasing and a temporary prosperity apparent, it cannot last, if England's overseas business is not expanding.

## Prospects Are Good for Building

Viewing the timber trade, it is to be admitted that there is a great improvement and the prospects for a far larger consumption than that of 1922. In house building the prospects have not been so bright for years and the shipbuilding and other industries are reviving slowly; railway companies are contemplating large expenditures for repairs as well as other channels in which wood is one of the essential requirements, but the foreign trade is altogether different and, unless political events develop favorably, the opinion is that the prosperity expected for the next six or nine months will likely tend to decline. British timber importers seem to realize this position fully and have lately been purchasing stocks of sawn goods from the Scandinavian shippers for the supply of the home market, but, at the same time for want of confidence in the future, refuse to commit themselves to any large extent. However, the position is such that optimism, attended by a readiness to change at any given time, seems to be the prevailing tendency. But in the present state of Europe, the importing by British lumber interests may be said to be practically in abeyance; nevertheless the representatives of the Quebec exporting firms anticipate a fair business even in excess of last year.

## Depreciated Currencies Under-valued

As pointed out in the advice notes received by the Quebec shipping firms by their United Kingdom agents, who are quite well-known financial authorities on the problem of under-valued currencies, with special reference to Germany, the situation is extremely disquieting. Experience shows that greatly depreciated currencies are often under-valued abroad. That such under valuation may be temporary, but in cases it is of a permanent nature, and the latter will be the case if the internal depreciation of the currency proceeds continually. The foreign purchasers of the currency will have to reckon with the possibility that it will have further depreciated in value in the course of a few months as is at present the case in Germany. It is without doubt the policy of Germany to demoralize the currency of Europe by deflation of the mark to the vanishing

point, and the only way to bring about the stabilization of the mark is to bring back into Germany the floating sums held by foreign countries. And this is what Germany is trying to prevent.

## The Structural Trade Outlook

One of the promising signs for a revival of the sale of timber and sawn lumber in the British Isles is a boom in the building trade. There is a great dearth of dwellings in every section of England and, at the same time, a desire to build. Dealing with this question the reports received are encouraging if they were not marred by the labor situation. At present there is a dispute between labor and building contractors, which if not promptly settled, is likely to seriously interfere with activities in this branch of England's economic situation. Labor leaders in the British Isles, like the labor leaders on this side of the Atlantic in their empiric wisdom, as soon as they sensed a boom in the building trade in England, came forward with a demand for an increase in wages, and the resisting of a reduction. When it is proved that the present scale of wages is so high as to arrest stimulation in trade, men seem to forget that they used to work to benefit themselves and their families and seemingly are now afraid to work in case they might benefit others. Under these lamentable conditions investors are reluctant to invest their money in building and building societies hesitate to make cash advances. These conditions are due to government legislation at the behest of labor, and it would appear that the only remedy would be to abolish the dole which would compel labor to work and bring wages down to their natural level.

In the meantime the Canadian lumber trade is not worrying over the situation as it exists in European countries for the present at least. The Quebec firms can afford to wait for a change in conditions on account of the business they are doing with the American and home markets. Their books are filled with orders from the United States where the building boom still continues and is likely to continue for the next two years, by which period of time they expect to see conditions in Europe improve unless the political difficulties of the present culminate in another war.

As a matter of course, Canadian shippers are anxious to get back into the European markets with the forest products in competition with Scandinavian countries but, to accomplish this end ocean freight rates from the port of Quebec to the ports of the United Kingdom, will have to be lowered to an appreciable extent, but so long as the American demand will last, which taxed the capacity of the Quebec mills last year and promises to be as good or even better this year to have caused an advance in the price from \$5. to \$7. per thousand feet, the Quebec shippers are happy.

## Exports During Last Fiscal Year

Scarcity of cars and interrupted transportation are the only elements for dissatisfaction. It is impossible to obtain the necessary cars from the railroads and the Quebec shippers with orders coming in almost every day for lumber, are at the time of writing at their wits end to deliver the wood ordered to their American customers, and in anticipation of a 25 per cent better business than last year, are naturally chagrined over the car shortage as well as slow movement in transportation.

Quebec lumber operators, discussing the present conditions of trade with the past three years, give out the statement that the business transacted in 1922 was as regards shipments to the United Kingdom fully 80 per cent better than in 1921.

The following is a statement of exports of square timber and lumber at the Port of Quebec, during the fiscal year ended March 31st, 1922:

Item	United Kingdom		Other Countries	
	Domestic	Foreign	Domestic	Foreign
	M. Ft.	Value	M. Ft.	Value
Square timber, white pine	.....	\$174,264	.....	\$15,148
Square timber, hardwood	.....	56,812	.....	.....
Planks and boards	.....	9,062 381,322	.....	11 424
Shooks	.....	7,200	.....	.....

In comparison with the foregoing, the custom statistical returns

bec during the succeeding summer months or season of navigation of 1922 from the month of April to the end of December to have been:—

Planks and boards, spruce .....	M feet	17,446	value	\$547,808
Planks and boards, pine .....	M feet	212	value	21,248
Planks and boards, other kinds .....	M feet	3,099	value	133,639
Timber, square, hardwood .....	M feet	1,230	value	94,162
Timber, square, white pine .....	M feet	1,460	value	161,517
Pulpwood .....	cords	23,189	value	231,890

If the European political horizon had been cleared the Quebec wood shippers expected to have doubled in 1923 the business of 1922 in the United Kingdom, and even now have hopes that a settlement will be made to ameliorate the situation which will tend to reestablish confidence and a renewal of business activities in Europe for the benefit of the Canadian lumber trade and the shipping interests of the St. Lawrence in general.

As predicted in a previous letter, the price of pulpwood is on the upward trend, and at the expiration of all existing contracts the American mills will be called on to pay higher prices than the present. The farmers are now asking from \$2. to \$3. higher for their

wood and the brokers naturally will be compelled to add the higher price for the wood they sell to the American mills under prospective new contracts.

Quebec shippers of pulpwood to American mills are meeting with the same difficulties as the lumber firms in regard to transportation. They find it almost impossible to get the service of cars and, in consequence, unable to ship the wood required to fill their contracts. The day is not far distant when the American paper mill interests will be obliged to come into Canada to establish their mills; that is, if they will depend for their supply of wood on Canadian forests, for the demand at home will be so large that there will be little left of the cut for shipment out of the province. Limit holders say the same thing will apply to the general cutting operations in the woods. Everything in the near future will go into the manufacture of paper.

The general feeling among the lumber interests of Quebec is optimistic for the year 1923, as far as regards the trade, and according to a conservative calculation it is expected that the business done will be better by 25 per cent, at least, than 1922.

## Lumber Industry in Nova Scotia is on Sound Basis.

By R. F. Logan, Halifax

R. F. Logan, Halifax

A review of conditions as affecting the lumber business in Nova Scotia for the past year confirms the opinion that the industry has returned to a good sound basis, and fully justifies the feeling of optimism that is everywhere expressed.

The depression of the last two years, preceded by the wave of inflation following the close of the war, has now been succeeded by more normal conditions. Trade, particularly export is of satisfactory volume, stimulated by a healthy demand while prices have advanced to a point where the manufacturer is able to realize a fair return on his outlay.

Compared with a year ago, the improvement is most encouraging. In the spring of 1922, inventories were large,

while owing to the restricted market, which was limited almost entirely to the United States, the movement of stocks was very slow, and sales for the most part, were made at below the cost of production.

Early in the summer there was a slight flurry in the British market, resulting in some liner business, and several full cargoes of spruce and hardwood were shipped from Halifax and other ports. Some of these cargoes were shipped on consignment, and the character of the market was revealed, when a number of these cargoes had to go into storage, for lack of buyers.

The efforts of the United States to cope with the housing

situation there, began to show results in the summer of 1922, and the success of the various schemes adopted for the purpose of encouraging building resulted in a building boom in that country, and was reflected in a marked increase in the volume of shipments from this province. As a result practically all the old stocks of suitable specifications were cleared out by the end of the year, and prices began to stiffen up. There was some doubt as to whether building would continue through the winter, but since the beginning of the present year there is no decrease in the value of building permits issued in the leading New England centres and competent authorities express the conviction that building activities will continue active for many months.

The course of the British market during the coming months is problematical, and widely divergent views are expressed. The weakening of deal and scantling prices early in February was in all probability attributable to disturbed European conditions, and the nervous state of the market is not likely to disappear until there is a reasonable guarantee of peace in Europe. Overseas trade is still seriously retarded by the high rate of ocean tonnage, which places our goods at a great disadvantage in comparison with wood from the Baltic and other European points, while there is no immediate prospect of any reduction in the existing rate.

The West India business is beginning to show signs of improvement, and there is every promise of a normal trade with the Islands to the South of us during the current year.

Locally the outlook for the coming year is for a demand well up to normal. There is not much new business yet definitely settled on in and around Halifax, but the quantity of lumber required for consumption in the larger industrial centres will be considerably in excess of last year.

Taking the situation as a whole, and making due allowance for unforeseen happenings, there is every reason for a feeling of satisfaction during the coming year, and the buoyancy of the market has gone far to dispel the feeling of uncertainty that has been experienced the past two years.

## Timber Exports of England from Different Countries.

Through the courtesy of H. R. Goodday & Co., timber exporters of Quebec, P.Q., the "Canada Lumberman" has been favored with a table showing the comparative volume of sawn lumber imported into England from various countries during the years 1912 to 1920 inclusive. The quantities are in loads of 600 feet, B.M.

	1912	1913	1914	1915
Russia	2,814,761	3,363,344	1,847,346	858,244

410,607	134,916	125,507	438,619	249,411

3,888,993 1,168,002 1,556,231 4,611,008 4,267,190  
The imports from Russia in 1919 and 1920 are mostly from Finland

In the recent Board of Trade elections in Toronto, J. L. Campbell, of the firm of J. P. Johnson & Son, wholesale lumbermen, was elected a member of the Council of the Board. As representative on the Canadian National Exhibition Board, Sam McBride, lumber merchant, and Capt. J. P. Beaty of the Beaty Timber Co., Limited, were among those who were returned.

## Lumber Cut in New Brunswick Will be Up to Normal

By T. G. Loggie, Fredericton  
Deputy Minister of Lands and Forests

T. G. Loggie, Fredericton, N.B.

The estimated annual cut of lumber from Crown Lands in New Brunswick will reach and probably exceed 210,000,000 board feet. This statement is compiled from the January reports and will be followed by a more detailed estimate. This is 115 millions more than was cut last year on Crown Lands, but it is 38 millions less than the average for the four years preceding 1922 and 25% less than the average for the four years preceding 1918. This difference is due mainly to the fact that a few large companies are not making a normal cut this year. Heavy snowstorms in January suddenly halted yarding or the cut might have been bigger. There are about forty four scalers on duty measuring the logs cut on Crown Lands. On private lands the cut is reported to be well up to normal, and in some cases well above the average. A large number of portable mills were operating early in the season taking advantage of the high price of lath. Since the slump in prices lath production has fallen off rapidly. The dead timber resulting from bud worm attacks has in many cases encouraged larger operations than would otherwise have been the case, as all lumbermen seem to be alive to the budworm situation and are attempting to salvage as much dead wood as possible. On Crown Lands the half rate of stumpage for budworm killed material is being taken advantage of in localities where dead timber exists.

The pulpwood situation is quiet at present. The production was much below normal during the past peeling season, while little pulpwood has been cut during the past winter. The cut of poles and railway ties will be well up to the average.

New Brunswick was fortunate in escaping with comparatively light losses from forest fires during the past summer. Only 11 square miles of forest land were burned and of this amount only 4½ square miles was Crown forest land. In 1921 some 130 square miles of forest land were devastated by forest fires. The cost of extinguishing fires only amounted to about \$2,500. as compared to over \$100,000 in 1921. Although the 1922 fire season was normal, over 100

fires occurred, and the small loss is due to a large extent to the activities of the fire organizations of municipalities and government wardens in extinguishing fires, supplemented in several localities by rapid and accurate detection of fires by lookout towers. These lookout towers have proven extremely valuable and no doubt more will be constructed. The 1922 amendments to the Forest Fires Act appear to have resulted in more interest being taken by the public in forest fire prevention.

It is expected that the "travel permit" clause of the Forest Fires Act will be enforced next season. Forest fire protection is rapidly becoming a community affair in New Brunswick the same as education, etc., and this alone means better protection in the years to come.

The damage caused by the spruce budworm has greatly increased the fire hazard. People going into the woods on business or pleasure during the next few years must be more vigilant than ever before in extinguishing their camp fires if the forest fire losses are to be kept down.

The lumber industry appears to have largely recovered from the depression as indicated by the winter's cut. The next few years should see considerable development in the pulp and paper industry.

### Statistical Summary from the Coast

The total amount of cargo shipments of lumber from British Columbia as reported to the Pacific Lumber Inspection Bureau, Inc., Seattle, Wash., for 1922 was as follows:—

	Foreign	Domestic
Australia .....	55,949,129	
China .....	24,640,268	
Cuba .....	30,065	
Egypt .....	4,269,953	
India .....	7,053,371	
Japan .....	72,339,531	
New Zealand .....	4,516,862	
South Africa .....	2,415,500	
So. Sea Islands & Fiji .....	1,841,578	
So. America, W. Coast .....	3,244,776	
Straight Settlements .....	196,116	
U. K. & Continent .....	12,698,383	
Atlantic Coast .....		60,787,079
California .....		23,069,425
Hawaiian Islands .....		
Philippine Islands .....		94,764

Total ..... 189,195,523 ft. 83,951,268 ft.

The total forest products exports, domestic and foreign, from British Columbia in 1922 were, therefore 273,146,800 ft., a gain of 84,475,872 over 1921.

# Some Outstanding Features of Montreal Lumber Market Reviewed for Busy Readers

At the commencement of the past year, Montreal wholesalers and retailers looked forward to better times in 1922. They had passed through dark days, suffering losses, but they believed that conditions would improve, that the demand would increase, and that prices would show an upward tendency. This was partly based on the prospects of a revival in general business, and partly on the ground that there would be a natural reaction from the drop in lumber quotations which characterized 1921. While the hopes of the more optimistic were not fully realized, the market, taking the twelve months, displayed a much better tone, with more buying power and stronger values—confidence was restored, in spite of two or three nasty jolts caused by failures.

## How Prices Strengthened

The early part of 1922 was dull; prices did not move to any appreciable extent—some grades of pine actually declined—but as the demand broadened, quotations of softwoods and hardwoods strengthened. The upward swing was more pronounced when it became evident that dry stocks were getting scarce, and those who were fortunate to hold desirable grades had no difficulty in disposing of them at enhanced values. At the end of the year, quotations exhibited appreciable gains, as compared with those at the opening of 1922. American buyers came freely into the market, and also purchased liberally from some of the Provincial manufacturers. These, by the way, did not as a rule find the year profitable. Some mills still had a number of high priced logs on hand, which could not be made into lumber at a price to show a balance on the right side, but mills were able to recoup themselves to a certain extent when values strengthened in the latter part of the year. The larger manufacturers maintained their prices; many of the small mills, however, were obliged by financial considerations to sell their lumber at prices which did not represent a return on the capital. This had a certain influence in keeping the market down during the early months.

Prospects this year in Montreal are distinctly good. There is reason to expect that building will be very active, the shortage in house accommodation being still evident. In addition to that several large structural projects are contemplated. It looks as if lumber values will be maintained for a considerable period, having regard to the scarcity of stocks.

## Development of the B. C. Trade

The call for B. C. forest products was moderate, the advance in prices acting as a deterrent on some classes of Western woods. There was, however, extensive buying of timber, particularly for harbor work, and in this connection an important development of cargo shipments via the Panama Canal occurred. Several boats from Vancouver unloaded at St. Lawrence ports, the lumber coming via the Canal. Transportation by boat is cheaper than by rail, and it is probable there will be a still further development of this trade.

Although the Province of Quebec produces a very large quantity of hardwoods, the demand for manufacturing purposes in the Province is not extensive. Mills and wholesalers have to depend on American buyers, export, and upon consumers in Ontario. During the first part of the year, trade was slow, but it took quite a spurt, with prices rising in a corresponding degree. The low ends of birch, which could not be given away in the early months, found a comparatively good sale when the market hardened.

## The Local Position

From a local point of view conditions during the past year were of a mixed character. Business was only moderate

during the first six months, but it then greatly improved, due mainly to a very extensive building program. The extent of the construction can be seen from the fact that the permits totalled \$21,132,586, a decrease of \$726,332, which was more than made up by the increase in the outlying districts, figures for which do not come into the Montreal total. The feature, as in the previous year, was the large number of residences constructed. Although a considerable amount of business was available, many retailers carried competition to an excessive point, with the result that the margin of profit was small. Wholesalers did fairly well on the whole, but they had to face the offerings of small mills, which sold direct to the retailers and in some cases to consumers. This position was not a new one, it was however intensified by the increase in the amount of stock put onto the market by these manufacturers. Wholesalers, too, were hit by the failure of retailers who apparently had not liquidated all their high priced stocks and who were compelled to meet the situation during the year.

Both wholesalers and retailers formed trade associations during the past twelve months. Montreal was practically without organizations dealing with either section of the industry, and it was felt that the time had come when bodies of this character should be formed in order to improve the relations between wholesalers and retailers and to take action in many other matters of local and general interest.

## Exports Increased

Considering industrial conditions in the U.K., exports from the Port of Montreal were fairly satisfactory. They showed a substantial decline as compared with those in pre-war days, but since then great changes have taken place, European competition being more intense, aided by lower freights and the exchange situation. While the total of 61,544,000 feet represents an increase of 22,272,000 feet, in only three other seasons were the shipments lower than in 1922. The exports from Montreal were adversely affected by the fact that one of the principal firms shipped very little, their energies being concentrated on the sending of stocks from the lower ports, such parcels forming part of the British Government stocks. In all, about 50,000,000 feet of Government stocks was bought for transportation to the U.K. The season opened with considerable promise, but the demand fell away and very little lumber was sent across during the latter part of the season. Pine formed a very substantial part of the shipments. One feature was the buying for Ireland, for shipbuilding purposes. The ocean freight rate was 85 shillings per standard, a rate which the shippers declared was excessive, as compared with the rates from Scandinavian countries. The steamship companies declined to make any reduction, claiming that lower rates would have no part in stimulating exports. The opening rate for 1923 season will be 80 shillings per standard. According to advices from the Old Country, there will be a better call for Canadian woods during the season which will shortly open. It must not be overlooked, however, that competition from the Baltic will probably be very keen, there having been a revival in trade from the Baltic ports.

Representatives of three British firms visited Canada during the year, with a view of introducing a new system of disposing of Canadian lumber in the British market, but the reception of the project was not enthusiastic. The following are the shipments, b.m., since 1904

1904	146,272,952
1905	148,649,976
1906	141,673,081
1907	111,819,895
1908	102,156,777
1909	110,008,619

1910	109,076,306
1911	95,871,940
1912	101,400,889
1913	97,890,047
1914	66,423,321
1915	98,121,264
1916	95,978,013
1917	30,303,737
1918	58,441,275
1919	144,375,182
1920	109,355,197
1921	39,272,000
1922	61,544,000

The cut of soft and hardwoods this season has been considerably larger than in the previous year. Manufacturers are looking for a substantially increased demand, at higher prices rendered necessary by the expensive camp operations, due to higher wage bills. Men at the beginning of the season were by no means plentiful, and more attractive wages had to be offered to induce men to go to the woods. Naturally, the mills will have to add this greater cost to the selling price. The cut of hardwoods will be appreciably greater, and some of this has been sold at values which represent a considerable advance on last year.

Having regard to the expansion of the pulp and paper industry, it is more than likely that pulpwood will play an even more important part in the lumber industry than it does at the present. There was a fair amount of buying of wood during the year, in the main at prices which showed little or no profit to the dealers. The pulp and paper companies in Canada and in the United States have made great inroads on the enormous piles of wood accumulated, much of it purchased at very high rates. This consumption had to be partly replaced, although many of the American concerns did not come into the market until late in the year.

The Canadian companies have cut very extensively this season, and have made special efforts to save the wood in burnt-over areas.

The Canadian and American pulp and paper companies are using pulpwood on a very extensive scale. Last year the output of the Canadian newsprint mills constituted a record totalling 1,086,551 tons, and present indications are that 1923 will see another increase, the demand being such that the plants are running to capacity. New mills are coming into operation and existing mills have plans for substantially increasing the output. In this connection, the development of the Lake St. John district by Price Brothers is of outstanding importance. There is a question as to whether or not the production is not nearing the point where the supply will exceed the requirements. The Province of Quebec is vitally interested in the pulp and paper trade, as it now forms one of her leading industries, both as to the consumption of raw material and the manufacture of the finished article.

#### Conservation in Quebec

A paragraph as to the conservation policy of the Quebec government may be in order. The Government have been making further efforts to conserve the forest wealth of the Province, and during the year put into force a permit system for entering Government lands, the object being to minimize fire risks. The Government have also decided to extend the facilities for the education of forest engineers, to establish a pulp and paper school, and generally to take other steps which will lead to the conservation of natural resources. The Government recognize that the Province must take these measures if the industries dependent on forest wealth, such as lumbering, pulp and paper, are to be maintained, to say nothing of their expansion.

## Some Things to be Counted in the Cost of Lumber

By W. H. Farmer

Did you ever feel inclined to complain about the cost of lumber or the extreme margin of profit that somebody is pocketing? Possibly you might have justifiable cause for complaint, but on the other hand a better knowledge concerning the cost of lumber may make you less inclined to complain. I mean so far as that cost concerns the workers in the production or preparation for the markets of that much demanded and extensively used commodity.

As you dwell in your ceiled houses or sit in your corniced churches with piles of lumber around you, and beneath you, and above you, wrought and fitted together for your comfort and admiration, let me ask, do you ever concern yourself about the cost of all the lumber that goes to house you and to protect you from the biting cold winter, the searching winds of spring, the hot rays of the summer sun, and the chilly dampness of fall?

Throughout the northern portions of Canada are great forests whither year by year thousands of men wend their way each Fall to be there for the winter logging operations. If you have not had the experience of a visit to one of these centres of the lumbering industry a few facts may interest you concerning these places where men congregate and where so much effort is being now concentrated to furnish you with material to build your church, your school, your home; or garage, your stable, or your chicken house. Out of these facts you will readily realize you have the means to formulate a correctly itemized account of the cost of lumber.

#### Crews Are not Outlaws

That commercialism does not consist exclusively in terms of dollars and cents will not be disputed. How aptly does Rev. 18: 12, 13 describe the basis and terms of commerce: "The merchandise of gold, and silver, and precious stones; and of pearls, and fine linen, and purple, and silk; and all thyne wood, and all manner vessels of ivory, and all manner vessels of most precious wood; and of brass, and iron, and marble, and cinnamon, and odors, and ointments, and frankincense, and wine, and oil, and fine flour, and

wheat, and sheep, and beasts, and horses, and chariots and slaves, and souls of men." The last item of this list must be borne in mind in making a correct estimate of the cost of lumber.

Now the men, who form the crews of the various logging camps are not the outlaws which a certain fictitious literature has represented them. Indeed, many of them are men of good social standing, from good homes and with unimpeachable records as citizens and workmen. In some cases it is voluntary choice that brings such men to seek camp life, and in other cases, circumstances have proved an arbitrary dictator leading in a path from which the individual will shrink with strong resentment. But they are here now and it is altogether likely that they will stay until the "drive" in the spring.

Now, you value your home; so do these men. Your communal, town or city associations have become part of your life. Yet these men are here away from all the aids and influences; educational, social and spiritual which is "the common round and daily task" for so many of us; and this sacrifice of theirs is part of the cost of lumber. Again there is a tendency wherever men congregate under such conditions for some to cut loose from, and to lose sight of, some of the finer and higher idealisms of life. One or two such weak characters have a tendency to weaken the "morale" of their fellows in camp who are not possessed of the strongest of character and temperament. Some must almost inevitably go under and this debris and wreckage (always however, salvageable by the power of the Gospel), must be calculated in the cost of lumber.

#### The Dangers and Difficulties

Then too, consider the physical conditions in Northern Manitoba and Saskatchewan where the writer matriculated in the bush.

The men turn out at 7-7.30 A.M., according to the measure of daylight or moonlight as the case may be, and eating

their dinners in the open, return to camp at 5:30-6:00 p.m. Sometimes they work in snow three feet deep with each overhanging limb of each tree heavily loaded with snow waiting to fall upon the axeman as soon as the first blow of an axe or movement from the wind shall shake the towering living pillar of wood marked to be felled. This snow may be dry and frosty, or it may be wet. If it is dry it means hardship for the poor patient horses who so faithfully work with the men; for dry frosty snow makes heavy hauling of the huge loads of logs, of which as many as 100 or more go to make a load for four horses. If the snow is wet the men must endure wet feet and legs till shoes, and socks, and neither garments can be dried in the bunk house at night while the men are sleeping.

A little knowledge of the well understood science of hygiene is sufficient to make one shudder at the thought of the possible results of such conditions; and worse could truly be depicted, but I spare you. Imagine also the possible danger to life and limb where sharpened axes with edges "like knives" are carried over ice roads and through brush often by inexperienced men; to say nothing of falling trees and rolling logs, any one of which would instantly crush the life out of a man.

Already this winter (and as I write January is not yet over) the casualty list of one company includes two deaths by accident and one by sickness; besides an almost countless number of major and minor accidents; cuts and bruises. Reckon this into your cost of lumber and do not forget that the "drive" with all its perils, and the milling of logs with all its attendant dangers has not been noticed yet.

Such computing of the cost of lumber may seem unique; or it may be urged that the same plan may be adopted in computing the cost of all commodities. That is perfectly true and, therefore, we have the less cause for complaining and the greater cause for thanksgiving.

And as we look upon the many evidences of the lumber jack's enterprise, and sacrifice may we send up a prayer to Him, who was known as "the Carpenter," Mark 6:3 but whom Christians delight to know as the Redeemer and Saviour, and whose knowledge of the woodcraftmen's need is as infinite as are His resources for them and all mankind.

And remember, too, the small company of missionaries of the Shantymen's Christian Association, that through their efforts in carrying the Gospel of Christ, the men in the bush may be won and finally caught up and transplanted like trees to flourish in the courts of our God.

## The Shifting Bases of Big Pioneer Industry

THE first centre of lumber production was in the North-Eastern states. It later shifted West to the Lake states, subsequently to the Southern pine states, and this year the Pacific Coast has taken the leadership in production and will no doubt continue to hold it indefinitely, said L. L. Brown, of Toronto, B. C. Lumber Commissioner in an address on the "History of the Lumber Industry" in Canada and the United States" which was delivered at the recent convention of Ontario retailers in Windsor. He said that the rapidity with which these changes had taken place was amazing. Twenty years ago the Lake States lead in lumber production, at which time they produced about 9 billion feet of white pine per annum. This is now reduced to barely 1 billion feet. In two years these Lake States, which comprise a population equal to that of Canada, will not produce enough lumber for their own requirements. In 1919 the Southern pine States reached their peak of production of 16 billion feet. It is estimated by Chief Forester Greeley of the United States that in seven years the Southern pine production will be about 9¼ billion feet, or a reduction of 38 per cent of 1919. The same authority also estimates that in seven years the Southern pine territory will consume its total production and will thereafter depend to a large extent on the Pacific Coast for their timber needs. One quarter of the present Southern pine cut is from second growth which is inferior in quality to virgin timber.

In a few words I have endeavored to outline the history of the lumber industry in the United States, and will see that we have already progressed some distance into the last chapter of that industry as it applies to virgin soft woods stands. The cut of the United States in 1920 was nearly 34 billion feet, more than half the soft cut in the world. This cut is 27 per cent less than the United States cut in 1907. They are using their timber four times as fast as it is growing—using their readily available resources at a much more rapid rate, and so in the near future will concentrate their operations on their last resources, those of the Pacific Slope, the only region in which an increasing cut is possible, where the cut has already grown from one tenth of the total 20 years ago to more than one quarter of the total United States production today.

This rapid consumption of timber by the United States without any adequate provision for re-stocking should cause Canadian lumbermen to consider their own situation. Here we have the centre of production shifted from East to West until today British Columbia leads all the provinces, producing 37 per cent of Canada's lumber, and is the only province in which an increasing cut is possible. The word "timber" is a misnomer as applied to our timber East of the Rockies today, for Eastern timber is practically a thing of the

past, and we are down largely to a pulpwood proposition. Our annual cut in Canada is slightly over 4 billion feet, about one ninth of that of the United States. Our stand is also much less, being about one-third of the United States total. Ontario's cut has decreased from one billion, three hundred and eighty-five million in 1912 to, roughly eight hundred and seventy-six million in 1920. While pine is rapidly becoming cut out in Ontario, the cut being composed largely of the less valuable species, such as Jack pine and hemlock. On the other hand, British Columbia's cut has rapidly increased until it now stands at roughly, 2 billion feet, of which, roughly, 1½ billion represents lumber.

British Columbia has been well described as a sea of mountains. Over half of the surface area of the province is above the timber-line. Roughly, 100,000 square miles are growing young forests, while 50,000 square miles are covered by mature forests, estimated to contain 350 billion board feet. British Columbia timber resources are divided into two main regions, that of the Coast, and the Interior or Mountain region. The Coast enjoys a mild climate and long growing season, and a very heavy rainfall, about 60 inches around Vancouver. These conditions make for luxuriant forest cover. Some of the most favorable sites have grown 60,000 feet, b.m. in 60 to 80 years, and exceptional areas have produced over 300,000 board feet per acre. The most important timber trees on the Coast are Douglas fir, cedar, Western hemlock, spruce and white pine.

The Interior or Mountain regions more nearly approximate Eastern conditions, having extreme ranges of temperature in summer and winter. Western pine, Engelmann spruce, fir, larch and cedar are the most important of this region. As has been stated British Columbia is the only province in which an increasing cut is to be looked for. The annual cut is only a small per cent of the yearly growth and lumber dealers who are now securing their stock from British Columbia are assured of a vast supply. The British Columbia provincial government maintains a timber exhibit at 51 Yonge Street, Toronto, showing finished rooms of British Columbia woods and an office staff to supply the trade with full information with regard to the forest products of B.C.

One of the most interesting features of the British Columbia trade is the phenomenal increase in water-borne export which has taken place in the last five years. This export trade has been a powerful stabilizing factory in the industry. Henceforth, it is predicted, we will not descend so low into the slough of despondency or climb so high to those dizzy heights of the runaway market; there will be less difference between the trough of the wave and the crest of the breaker, largely due to the fact that B. C. markets are worldwide. Our eggs are no longer in one basket.

## The Production of Shingles in Canada

According to the latest returns of the Dominion Bureau of Statistics, Ottawa, the total cut of shingles in Canada for a year was 2,855,706 M. and the value of \$14,695,159. British Columbia is, of course, the largest producer, turning out over three-quarters of the total output. Quebec comes next and then New Brunswick.

The red cedar shingle, is a long way in the lead. The statement of the different kinds of woods used in shingle production is interesting and the appended figures afford a summary of the showing made by each province in the Dominion in one year.

### The Shingle Cut By Provinces

	Quantity	Value
British Columbia .....	2,135,857 M.	\$11,190,999
Quebec .....	387,813	1,839,595
New Brunswick .....	260,077	1,321,311
Ontario .....	43,739	226,703
Nova Scotia .....	13,635	56,554
Prince Edward Island .....	8,871	32,529
Alberta .....	3,788	17,888
Saskatchewan .....	1,803	9,105
Manitoba .....	123	475
Total .....	2,855,706	\$14,695,159

### Shingle Cut By Kinds of Wood

The kinds of woods used in the production of the 2,855,706 M. shingles cut in the different provinces of the Dominion were:

	Quantity	Value
Cedar .....	2,773,792	\$14,284,132
Spruce .....	55,379	269,113
White Pine .....	8,341	48,455
Balsam fir .....	8,152	35,858
Hemlock .....	5,339	32,177
Jack Pine .....	1,204	6,504
Douglas fir .....	652	4,336
Poplar .....	576	2,287
Unspecified .....	2,271	12,297

## Exports from Campbellton Show Increase

G. C. Woodward, American Consul, Campbellton, N. B., has furnished the following comparative statement of exports to the United States of forest products. The statement is compiled through the American Consul at Campbellton and the agencies at Bathurst, N. B. and Gaspé, Que., during the calendar years ending December 31st, 1921 and 1922. It may be pointed out that the Campbellton Consular District comprises the counties of Restigouche and Gloucester, N. B., and the Gaspé Peninsula, Que.

### Lumber Products Export From St. John

Wood & Products:	Unit of	1921	1922
	Quantity	Quantity	Value
Lath	M	96,205	530,871
Lumber			
Cedar	M	35	1,487
Hemlock	M		105
Miscellaneous	M	2	92
Pine	M	1,790	64,110
Spruce	M	44,599	1,331,054
Miscellaneous	pcs.	868	723
Piles and poles	pcs.	13,711	62,967
Pulpwood	cds.	14,223	224,813
Shingles	M	65,325	293,723
Ties, railroad	pcs.	35,903	36,140
Tress, Xmas	bdl.	5,695	1,655
Woodpulp	lbs.	22,327,616	682,612
Total Exports.			\$3,873,594

## Lumber Production for Ten Years

The last eight months of 1922 witnessed the largest maintained volume of production of lumber for any such approximate period since 1914, according to the graphic charts published today by the economics department of the National Lumber Manufacturers Association. For those months lumber production in the United States was maintained at from about 110 to 125 per cent of the average monthly production for ten years; though the first four months of the year were well below average.

The yearly reported figures of the United States Forest Service and the yearly and monthly figures of the reporting associations of the National Lumber Manufacturers Association are used as the foundations of the computations. The percentage which the Association figures bear each year to the corresponding annual production of the country (Forest Service totals) is assumed to indicate the approximate relationship which the monthly figures would bear. United States monthly figures are therefore computed on this percentage basis and the relationship of these is shown to the average monthly United States figures for the ten year period.

The average yearly production for the ten years of the United States based on the Forest Service figures (plus an estimate for 1922) is 33 billion feet; the average monthly production is 2.75 billion feet. This 2.75 billion feet is taken as 100% on the chart.

The relation which the production as reported by the Association bears to the total United States in each year is shown in the following table:

	Reported to N. L. M. A. (feet)	Total Reported to Forest Service (feet)	Percentage N. L. M. A. Reports are of total
1913	13,486,800 M	38,387,000 M	35.1
1914	11,386,300 "	37,346,023 "	30.5
1915	11,335,300 "	31,241,734 "	36.3
1916	14,621,600 "	34,791,385 "	42.0
1917	15,461,000 "	33,192,911 "	46.6
1918	14,109,000 "	29,362,020 "	48.0
1919	12,711,000 "	34,552,000 "	36.8
1920	12,858,800 "	29,878,360 "	43.0
1921	9,509,900 "	26,991,798 "	35.2
1922	13,428,500 "	34,800,000 "	38.5

## Shipment of Wood Goods from Ottawa

The report of the American Consul for the Ottawa District showing the export of forest products from that section to the United States during the year 1922 is interesting. The returns are as follows:—

Lumber		
	Feet	Value
Dressed Lumber .....	22,497,543	\$ 991,747
Rough Lumber .....	103,274,333	3,903,945
Lath, Pickets and Shingles		
	M	Value
Lath .....	36,074	\$264,922
Pickets .....	11,425	141,820
Shingles .....	18,584	75,237
Pulpwood (peeled)		
	Cords	Value
Peeled Pulpwood .....	53,695	\$599,769

## Exports of Pulpwood and Pulp Grow

The exports of forest products from Canada in the form of pulpwood, paper and pulp continue to grow. This is particularly noticeable so far as pulpwood is concerned. During the first ten months of the present fiscal year, which ends March 31st, 1923, the pulpwood exports to the United States were 883,139 cords, valued at \$8,906,091 compared with 630,540 cords, valued at \$7,926,536 for the corresponding period in January 1923 totalled \$10,298,243, a gain of \$1,466,763 over the period in 1921 and 1922. The total exports of pulpwood and the same month a year ago and compared with \$10,249,418 in December last.

The total export of newsprint, book and other paper in January 1923 was \$6,604,975 as compared with \$5,377,465 in January 1922. Exports of pulpwood are also growing and in January 1922 and January 1923 were respectively:—

Sulphate .....	\$ 609,943	\$ 685,759
Sulphite, bleached .....	1,072,091	1,201,330
Sulphite, unbleached .....	631,910	811,262
Mechanical .....	1,140,071	994,917
Total .....	\$3,454,015	\$3,693,268

Exports of wood-pulp showed a good increase as regards quantity, but this increase was not fully shown in the values owing to lower prices.

The principal countries of destination of these exports in January were as under:—

	Paper	Pulp	Total
U.S. ....	\$6,227,481	\$3,058,705	\$9,286,186
U.K. ....	135,893	360,103	495,996
Others .....	241,601	274,460	516,061
	\$6,604,975	\$3,693,266	\$10,298,243

Exports of pulpwood for January were 133,328 cords, valued at \$1,195,886, compared with 66,094 cords, valued at \$696,943, in January, 1922.

Figures for the first ten months of the fiscal year show appreciable gains over the corresponding period of the fiscal year 1921-22.

Wood pulp—		
Sulphate .....	\$ 6,313,861	\$ 7,649,623
Sulphite, bleached .....	6,648,370	10,445,194
Sulphite, unbleached .....	7,813,218	9,234,020
Mechanical .....	9,487,506	8,296,343

# Statistical Consideration of British Columbia Production and Gain in Export Trade

By H. C. Copeland, Vancouver

When the lumber trade of British Columbia looked forward to what 1922 had in store for them it was with many misgivings. The Jap export trade had dropped off sharply; the prairie business showed but slight signs of revival; the California demand slackened. Prices were low and an order for a car of lumber was looked upon as somewhat of a curiosity.

Out of the various markets open to B. C. timber possibly the least developed was that of the Atlantic Coast; out of 211 million feet shipped there in 1921 from B.C., Washington and Oregon, B.C. shipped only a trifle over 5 million feet. When the writer suggested to a number of representative timber men early in May 1922 that the Atlantic Coast shipments from B. C. in 1922 would exceed 50 million feet, he was laughed at; yet the total water borne shipments from B. C. to the Atlantic Coast in 1922 missed the 70 million mark by a scant few hundred thousand feet.

The Australian market, which had fallen off more than four million feet in 1921, came back strong with an increase of more than 100%. Japan climbed back with an increase of almost 50%. The West Coast of South America gave an increase of 168% which to that limited trade meant two million feet. China, it is true, due to its internal troubles fell off sharply. Egypt dropped over four and a half million and some of the other markets showed a small loss over 1921.

When the final accounting was done at the close of 1922 it was found that 1922 showed a gain in cargo shipments from B. C. of 50% over 1921, or 284.75 million feet in 1922 as against 188.68 million feet in 1921.

It is an established fact that the higher the percentage of cargo, water borne shipment of lumber to the total cut the higher the trend of price and the more stable the market. Beginning with 1916 the figures run as follows:—

1916	3.7%
1917	2.5%
1918	5.0%
1919	6.2%
1920	7.0%
1921	11.0%

While the total cut for 1922 is not available at this time it is nevertheless certain that the percentage of water borne cargo to the total cut will exceed 15%.

## Development of Atlantic Seaboard Trade

The increase from 5,431,000 feet in 1921 to 69,304,095 feet in 1922, a gain of nearly 1500%, might be startling were we not assured that B. C. lumber is the peer of any in the world, and when some of the methods of handling are brought up to the minute, will compete with any in the world on a firm basis.

The development of the above line of trade points out two fundamental facts of commerce; first, no matter how good your articles, you must tell the prospective buyer about it before he will spend his money; second, you must find out what the buyer wants and make a product to supply his needs; it is the customer's privilege to be bone-headed if he wants to be so.

When B. C. began to send men into lumber markets of the eastern states to learn their needs and to tell the buyers of the established merits of the British Columbia products the orders for that commodity began to come in and rapidly gather in volume.

The growth of the business to the United States is well shown in the following table:—

1916	3,565,000
1917	No figures given
1918	2,013,000 to California
1919	5,259,000 Principally to Cal.
1920	4,162,000 Principally to Cal.
1921	26,712,000 of this 5,431,000 to Atlantic Seaboard and 20,000,000 to California
1922	22,745,000 to California
1922	69,304,000 to Atlantic

or more than 300% increase over 1921. The most remarkable point concerning this is that the greater portion of the increase was in the territory that in the previous year, had given but a fourteenth of the business.

Australia had been a market that was slipping badly, quite different from the case of the Atlantic Seaboard, which only existed potentially. A determined effort was made by several of the larger exporters to bring the Antipodes back into line for B. C. lumber and it succeeded to the extent that 1922 showed a total of 56,970 M. feet as against 27,275 M. the year before.

Again this increase showed what energetic, intelligent promotion work will do, even on a proposition of national scope.

## What Good Promotion Work Does

When we consider the increase of population in Japan in connection with the kind and quantity of housing, it is easy to see why the demand from Japan must, on the whole increase rather than diminish. The total figures will of necessity follow the general course of economic affairs in Nippon. The buyers for the Jap trade are also canny birds and delight to rig a bear market for their work. That is where the thousands of years old heritage of patience of the oriental has the great advantage over the modern business man of our Western civilization.

As the Japanese trade began to develop we naturally started after it as we would any desirable business—quick efficient service, careful attention to quality, grades, etc. This the crafty brown buyers took to mean a glutted market, reflected in a too great desire to take on business with the result that, on a few occasions, they upset the market to a slight extent for a little time.

It took only a relatively short time, however, to learn the methods of the gentlemen and now we have only to wait and he will pay the price and, if he hesitates, a little raise will set him very busy. Under the above conditions an increase from 52 million feet in 1921 to 72 millions in 1922 is quite satisfactory.

One of the most disappointing, and to a considerable extent, provoking, features encountered in marketing B. C. lumber is the slight response from the U. K. In the face of the indisputable superiority of the B. C. woods and every preferential right for U. K. business, the sales of B. C. lumber fell off in 1922 a measly half million feet. There are several words that have a nasty sound that might be applied to account for this fact but it is likely that "self-sufficiency and selfishness" will cover the matter without the use of more pungent words.

A survey of conditions in California indicate that the great building program there will continue in 1923 without break. This, in connection with California's increase of two and a half million feet over 1921, is a satisfactory condition.

## Pulp, Paper and Box Business

These departments of timber consumption do not continue to show an increase in the percentage of total cut consumed by them as witnessed by the following table:—

	Percentage of total cut	
	Pulp & Paper	Boxes
1916	10 %	5.2%
1917	14 %	3.3%
1918	19.4%	3.4%
1919	17.5%	3 %
1920	23 %	2.8%
1921	08%	1.1%

In 1922 there was a slight increase of the above percentage.

It is possible that the manufacturers in these lines are using a better grade of timber to some extent than is absolutely required. The salvage from logging operations should play a more important part in these operations than it does.

The following table will show the relation of the export business of B. C. to the total cut of the province:—

	Total in B.F.	Export in B.F.
1914	1,151,903,000	33,190,000
1915	991,780,000	58,075,000
1916	1,161,750,000	43,676,000
1917	1,545,422,000	43,923,000
1918	1,761,184,000	88,069,000
1919	1,758,329,000	108,872,000
1920	2,046,469,000	146,624,000
1921	1,700,000,000	188,671,000
1922		284,752,703

The appended will give a birdseye view of the export trade and markets for B. C. lumber with a comparison of 1921 and 1922.

Total amount of cargo shipment from British Columbia for the year 1922—lumber, lath and pickets.

British Columbia	1922	1921
Australia	56,968,891	27,275 M Ft.
China	24,992,828	41,790 M Ft.
Cuba	30,065	
Egypt	4,269,953	8,566 M Ft.
India	7,053,371	8,249 M Ft.
Japan	72,544,176	52,400 M Ft.
New Zealand	4,794,006	4,553 M Ft.
South Africa	4,062,664	3,069 M Ft.
South Sea Islands and Fiji	1,841,578	942 M Ft.
South America W.C.	3,244,776	1,284 M Ft.
Straits Settlement	196,118	
U. K. and Continent	12,610,251	13,592 M Ft.
Atlantic Coast	69,304,095	5,431 M Ft.
California	22,745,167	20,121 M Ft.
Philippine Isles	94,764	

284,752,703 188,680 M Ft.

(This Bulletin is not complete due to some outstanding reports of the mills, but is correct for all practical purposes).

In closing we may state that careful attention to economical methods of manufacturing and intelligent reafforestation will perpetuate for the Province of British Columbia a source of tremendous wealth.

### Continued Improvement Shown in Ottawa Market

Continued improvement in the Ottawa lumber market was shown during the opening period of March, when retailers began to move stocks previously purchased, and the number of both American and domestic inquiries increased. The demand was principally for the lower grades. Embargoes at American entry ports remained as tight as they had been, which continued to mitigate against the shipment of orders previously booked. Foreign cars were fairly plentiful, but permits got if anything harder to obtain. Snow storms and low temperatures in some of the northern states did not promise a speedy reopening of normal transportation.

The soft weather experienced through the Ottawa Valley district during the early part of the month, was also felt in the lumbering camps, with the result that, following the drop in temperature on March 6th, the roads were in excellent condition for hauling.

The supply of labor for the spring operations was reported as being plentiful, and the local companies reported they had sufficient men in sight to ensure the replacement of those in the camps, who by tradition migrate on March 22nd, which they maintain is the first day of spring.

Conditions with the woodworking plants and factories showed no general change.

### Commons Discusses Number of Forest Fires

An interesting discussion on forest conservation and the perpetuation of the natural wooded assets of Canada took place in the House of Commons at Ottawa recently and aroused much interest. A resolution in favor of federal and provincial co-operation for forest preservation was introduced by P. Michaud, M.P. for Restigouche-Yamaska, who declared that Canada had suffered in 1922 more than 4,000 forest fires, resulting in loss of timber sufficient to cover a belt one mile wide from Halifax to Winnipeg. Added to the ravage of fire, he said, was that of pests. In the last ten years the spruce bud worm alone had caused a total loss in Quebec of 100,000,000 cords of pulpwood, and in New Brunswick of 50,000,000 cords.

Mr. Michaud's plea was furthered by T. W. Campbell, M.P. for Victoria-Carleton, who said that the forests of his Province had suffered vastly more from fire than from the woodsman's axe.

That greatest efforts at present should be toward prevention of forest fires, was the contention of Hon. Charles Stewart, who said he welcomed the resolution.

Hon. Arthur Meighen said he was not concerned over the fate of "this colorless and meaningless resolution," calling, as it did, for co-operation, "which in these days often means very little." The great protagonist of reform in forest policy, in his opinion, was Frank J. D. Barnjum, whose array of facts was absolutely indisputable, and whose grave warning Canada should heed, and at once.

"In the West, particularly," he said, "we cannot apply such regulations as we have, because jurisdiction lies within the Provinces themselves." It might be advisable, he went on, to impose an embargo or high export duty on Canadian pulpwood, even in the prospect of retaliatory enactments. Provinces must unite in legislation; failing that, it might be well to make failure to gather and destroy slash an offense punishable under Federal laws. "Indeed, I can see no other way of avoiding these fires that are devastating the forests of our country," he declared.

Dr. Murray MacLaren, of St. John, recommended a series of

interprovincial conferences and more definite assistance from Federal departments, while W. G. McQuarrie, of New Westminster, urged against any curtailment of the aerial survey inaugurated on the Pacific Coast. He doubted the practicability of slash-burning, but was assured by Hon. Dr. King that slash-burning already was practiced in British Columbia.

Complimentary reference to the "splendid enthusiasm" and "excellent work" of Frank Barnjum was made by Hon. W. S. Fielding, who said that that gentleman was doing a national service in awakening Canadians to the critical state of their forest resources. Ontario and Quebec, he said, had largely, but not absolutely, prohibited pulp export, but owners of private pulp areas, notably in Quebec, claimed the right to export their "product" as freely as that of other producers.

Mr. Warner, M.P., for Strathcona supported the resolution, which was carried.

### New Organization Will Extend Operations

The Canadian Lumber Co., Limited, with headquarters at Ste-wiacke, N. S., is the new organization which has succeeded Rufus E. Dickie. The company exports spruce, pine, hemlock and hardwoods consisting of birch, beech and maple and also large quantities of spruce lath. They have a well-equipped dressing and resawing plant situated on the main line of the C. N. R. and besides dressing stock of their own production, are doing a considerable amount of work for other firms. Mr. Dickie, the head of the newly formed Canadian Lumber Co., Limited, is president of the Nova Scotia Lumbermen's Association and has been for several years a director of the Canadian Lumbermen's Association.

### Forestry Experts Coming to Canada

A grant of \$3,000 has been approved by the Provincial Government as New Brunswick's contribution towards the expenses of the Second Empire Forestry Conference, which will be held in the Dominion this year, the tentative date for the opening at Ottawa being July 25th.

Already the province of British Columbia has voted the sum of \$5,000 for the expenses of the conference while Quebec and Ontario have voted \$7,000 each. The amount set aside by the Federal Government, for the Conference is \$30,000.

Among the noted visitors who will be in attendance at the conference which is to extend over a period of six weeks, including tour of New Brunswick and Quebec following the opening in Ottawa, and later a tour of Western Canada, will be Lord Lovatt, chairman of the Forestry Commission of Great Britain;

FIRST FLOOR PLAN

## A Six Room Home

SECOND FLOOR PLAN

A six-room, gambrel-roofed house that is an excellent example of the Dutch Colonial type of architecture is shown on this page. It suggests compactness and comfort and can be erected, according to the estimates of the Home Owners' Service Institute for, between \$6,500 and \$7,500.

It is a house adapted to a lot of forty-foot front or less. As designed it has an exterior finish of siding, which continues around the porch except under the columns supported by field masonry piers. The use of shingles on the second exterior would be effective. It is pointed out, also, that a striking combination could be achieved by building the lower storey exterior of dark red brick, with wood siding above for second storey. Stucco would also be effective for the first storey. The roof is shingled.

The house was designed by Whitman S. Wick, of Middleton, N. Y., and is for discriminating home builders of moderate means seeking something in a small house that combines durability with real beauty. Complete plans for this house can be obtained upon application to the Home Owners' Service Institute, 37 West 39th Street, New York, N. Y.

The little Dutch house is without the usual dormer windows. Extending the entire width of the house the front porch is exceptionally large for a small house, 9 x 26 feet. One enters the house into an ample hall with an open stairway leading to the second floor. The particular housewife will observe that access from the kitchen to the front hall is directly through a passageway rather than through various rooms.

Popular open fireplace is located at an angle in the living room. There are wide-cased openings from both hall and dining-room. French doors could be used in either or both if desired. The dining-room is nearly square, with ample wall space for all necessary furniture and there is a well equipped kitchen.

On the second floor are three large, well lighted and ventilated bedrooms. Each has ample closet space. The bathroom contains the necessary fixtures as well as a built-in medicine and a small closet. There is a linen closet in the hall.

The basement is large and light and may be partitioned off for laundry and drying rooms if desired.

### Outline of Specifications

**Masonry:** Footings, foundation walls and piers below the grade to be concrete. Exposed outside surface of foundation walls to be finished with a cement finish. Cellar and front porch floors of concrete three inches thick, with a one-inch surface finish. Chimney to be built of best quality, hard burned brick. Fire place facing and front hearth also to be of brick, all built according to detailed plans and specifica-

tions. The nosings of steps of front entrance porch to be of brick laid in a bed of sand and joints filled with mortar.

**Carpentry:** Complete directions for framing are given in detailed specifications. Framing timbers shall be of pine, spruce or hemlock. All floors to be joist construction. All exterior walls to be sheathed with 1 x 8 inch ship-lapped sheathing; over this place a heavy sheathing paper, at least, two-inch lap. All exterior walls to be covered with wide cedar siding. All exterior cornices, overhangs, doors, sash, etc., to be built according to detailed plan and of white pine. Porch ceiling and main cornice ceiling built according to detailed specifications. Lay 1 x 8 inch ship-lapped under floor on first and second floors. Finish floor in living room, dining-room and entrance hall to be of white oak, all other finish floor to be of pine, scraped and sanded to a smooth finish. The stair finish to be of oak treads, basswood strings and risers and birch handrail, all according to scale detail. Interior doors to be two-panel birch doors and trim and interior finish of basswood. All hardware to be selected by the owner and as described in detailed specifications.

**Plastering:** All plastering, except in cellar to be of two-coat work on an approved type of lath for bath walls and ceilings, and left in perfect conditions when finished. Gutters and leader to be of 16 ounce copper or zinc, all as described in detailed specifications.

**Painting:** Prime all finished work as soon as erected with lead, zinc, and oil paint. All exterior, except shingles to be given one coat of stain. Porch ceilings given two coats of spar varnish. All interior woodwork, except cellar and attic, to have three coats of mahogany acid stain, color as selected, and finished with one coat of white shellac and two coats of preservation varnish, rubbed to a dull finish. Floors and main stair treads to have three coats of dull floor varnish, third coat left in the natural finish. All varnish and paint to be of grades as described in detailed specifications. Interior walls and ceilings to be finished according to selection of owner.

**Plumbing:** Detail specifications calls for the installation of complete sanitary service system. All fixtures to be selected by the owner.

**Heating:** To be an approved type of warm air system of ample size to heat every room to a seventy degree heat under severest local weather conditions.

**Electric wiring:** Detailed specification calls for complete installation to provide all necessary conduits, fittings wiring outlet boxes, cut-out fuses, switches, etc., for the complete electrical equipment of the house in accordance with the requirements of the Board of Fire Underwriters and local service companies. Sufficient outlets are required for utility and convenience of electrical equipment.

# Opportunities at the Port of Cardiff

By T. W. D. Smith

**H**ERE are two facts not generally known, and which will appeal to Canadian Lumbermen, namely, that Cardiff is nearer to Canada than any British port and is second only to London as a British timber port. The latter statement is borne out by the following figures, taken from the Board of Trade returns:-

CARDIFF AND THE CANADIAN LUMBER TRADE		
	1913	1919
LONDON	1,974,228	1,259,174
CARDIFF	1,326,219	771,648
LIVERPOOL	738,591	467,601

Early in the 19th century the "Marquess of Bute" of 560 tons register brought oak and fir timber from Canada to Cardiff, the passage occupying from 40 to 60 days.

With the opening-up of South Wales to industrial and commercial activities, the demand for timber became urgent, and Cardiff rapidly grew as an importing centre for wood. The wood imported into Cardiff falls into two distinct categories, first there is the timber known as pitwood and pitprops, used at the collieries in the construction of roadways, galleries and walls, amounting in the aggregate to very large quantities. In fact, Cardiff imports more pitwood and pitprops than any port in Great Britain. In practically all the colliery workings props are necessary to support the roof and very often the sides of the passages. These props, of varying sizes, are imported in immense quantities from the South of France, Scandinavia and the Baltic. Attempts are now being made to induce the import of such timber from Canada.

It may interest the Canadian exporter to know that the prevailing price today is 110/- per fathom, a fathom being 216 cubic feet. The sizes are as follows:-

6½ feet long by 2½ to 7 inches diameter  
9 feet long by 3 to 8 inches diameter

The collieries require that the bark should be removed and pit props squared at the ends, all knots being well trimmed off. The wood required is "Larix Occidentalis" and, in the opinion of one of the largest of Cardiff's importers, rossing the pit props would probably satisfy Cardiff buyers.

The Canadian Trade Commissioner, in order to develop this trade, has recently written the Canadian Lumberman's Association of the visit of one of the Cardiff pit prop importers to Newfoundland who is willing to also cover the Maritime Provinces if any exporters wish to do business.

## Timber Required for the Industries

Secondly there is the whole range of rough and square timber which is such an essential requirement in many of the industries and trades carried on in Cardiff and district. In particular, the railway companies purchase oak, pine deals, pitch pine and yellow pine for the manufacture of carriages and wagons, and for their stations, buildings and permanent ways. The construction of docks, jetties, etc., demands large quantities of pitch pine. In recent years there has been a marked increase in the import of fine woods used in carriage building and in general cabinet work.

Cardiff is an important ship repairing centre. This trade absorbs immense logs for beams, ship masts, poles, etc., where strength and lightness of material are requisite, and woods of varying kinds are used by the many works carried on in the Cardiff district, including biscuit making, confectionery, paper making, breweries, mineral water manufactories, vinegar factories, jam factories, tobacco and cigar factories, soap works, etc.

## Why Wood Should go to Cardiff

The particular kinds of Canadian wood mostly used are spruce for building purposes and for packing cases and red pine (pinus resinosa) used for carpentry or joinery purposes and general building. Generally speaking, spruce, B.C. fir and white pine are imported in deal sizes 2½" and 3" x 6" and wider. Oak is used for wagon scantlings, boards, etc., birch chiefly for boards and maple for flooring. The most popular widths and thicknesses for the English trade are 3" in width, by 6" to 11" thickness. As the trade in Canada well knows, importers prefer that shipments of spruce and B.C. fir be made in full cargoes; other grades of wood sent in less than full cargoes usually arrive in parcels per liners.

The facilities provided at the Cardiff docks for dealing with timber are good and ample. There are numerous timber floats, 28 acres in all, and wharves and yards with the necessary labour saving machinery and appliances. The dock dues and other charges imposed at Cardiff compare most favourably with those charged at other ports. At Cardiff there is the special advantage that ships arriving with timber can always obtain a return load of coal or bunkers without loss of time and without having to pay a second set of dock dues.

The Canadian exporter should bear in mind that the freights operating from Canada to British ports are higher than those from Sweden, where most of the pine imported into Britain is received from. Now is the time for Canadian exporters to send their wood to Cardiff for the reason that Cardiff is exporting coal to Canada.

Regular sailings already operate between Montreal and Cardiff in the summer and between Halifax, (N.S.) and Cardiff during the winter months by the Canadian Government Mercantile Marine boats. This service has been so advantageous to traders on both sides of the sea that the sailings have recently been increased.

A unique opportunity presents itself to open up new markets between Canada and Cardiff and the Canadian Trade Commissioner, in conjunction with the Cardiff Development Agent, are watching the matter very closely.

Here is a thirty-five ton load of spruce logs consisting of 242 pieces of 16-foot lengths. This great weight was hauled by the team of Sam Larche two and a half miles down the big gulley on one of the timber limits of the Abitibi Power & Paper Co., Iroquois Falls, Ont. The picture shows the immense load just as it has been completed and before the horses were hitched on.

### What This Year Will Bring Forth?

On all sides the question is being asked what are the prospects of the lumber industry during 1923. The speculative always arouses more interest and solicitude than the present. To the future we ever look with desire and inspiration. Nearly everyone likes to make a prediction and to imagine that he or she has vision which the development of time and circumstances will justify. What is going to happen is ever more interesting and alluring than what has happened, and, consequently, the question of outlook is one that is being discussed on all sides.

In interviews, which appear on other pages of the "Canada Lumberman," it is declared that 1923 should witness very considerable improvement in general business, particularly so, in the lumber line. It is difficult to present a concrete forecast, and so many predictions have been upset in the past by unlooked-for turns in consumption, distribution and demand that knowing ones have ceased to speak with the same assurance and definiteness regarding the future that they did in the days before the war. Then the volume of prospective trade could be gauged largely by what had taken place during the past season. Conditions were normal and development gradual and regular. There were no unexpected turns in the road, no unforeseen barriers and a long vista could be secured from the watch towers of operation and production.

To-day, owing to the complex foreign situation, depreciation of currency, demands of labor, agitation, unrest, extravagance, spendthriftiness, high living, love of luxury, etc., many other factors have to be taken into consideration. A world war upsets every standard and uproots every tradition, and the work of liquidation, replacement and readjustment is naturally prolix and painful.

However, 1922 was a much better year in the forest products line than the previous one judging by reports received from lumbermen in all parts of the Dominion. Building was more active and demand gradually developed and strengthened until the last three months of the year witnessed in some quarters a remarkable revival.

So far as the coming year is concerned, manufacturers and wholesalers believe that business for the first six months at any rate will be unusually good, but just what will happen after that when the new cut comes on the market, no one cares to foretell. Everything points to the fact that 1923 will, on the whole, be a better period than 1922, providing no untoward event occurs to mar the increasing demand for lumber, the home building campaign, constructional undertakings, the awakening activity in industrial enterprises and the numerous projects that are being considered and discussed on all sides. No one expects that 1923 will be a boom year but it should be one of uniform business transacted on a sound,

square profit basis and not characterized by any artificial accessories. The latter tend to becloud the issue and warp the judgment and ideas of those who are inclined to be swept off their feet without sufficient thought or discernment.

A firm hand, a clear conscience, abundant patience, diligent application, greater efficiency and needed economies will bring the lumber industry through the coming year with a larger measure of satisfaction to all branches than has been witnessed during the past decade.

Babson, in a recent article, gives the following opinion of 1923: "It will be possible for you to make as much during the next twelve months as in any year of your business life, but it will not be along the lines which made money in 1919 and 1920, nor in any other boom year. The profits of 1923 will come by giving attention to details, by stopping the little leaks, by saving here and there through new labor-saving inventions, and most of all, by devising new and more economical means of distributing goods."

### How Far Do You Honor Contracts?

This question is again being asked by lumbermen in various parts of the country owing to the ascending prices in certain lines of wood products. It is a peculiar commentary upon human nature that some producers think, while they operate normally by one rule, it may with impunity be suspended in time of stress or difficulty. A business man will frequently talk about the shortcomings of another, his lack of honor, judgment, sense of obligation and square dealing. At the same time the accuser may be guilty of more flagrant breaches of merchandizing ethics than any which he attributes to the other fellow. There are certain men who always observe the golden rule, and are able in every relation of life to see two sides to a proposition and act toward others as they would have deal with them.

In the buying and selling of lumber, too much nowadays is often left unrecorded or implied. There is nothing definite in black and white, so far as stipulations as to trade, delivery, price, etc., are concerned. These contracts are not binding ones but are based on loose, oral agreements or cloudily-worded correspondence, embodying terms and expressions which are not interpreted the same way by both parties. The result is that there is opened up a fruitful source of misunderstanding, suspicion, delay and dissension.

The train, that leaves a station in which there is a network of tracks, but proceeds out on the right one and starts on time, is seldom delayed or has any difficulty in reaching its destination at the appointed hour. The same observation might be applied to properly worded, carefully drawn-up order forms, which do not leave a wide loop-hole for an assumption that such and such is the case. Of course, there are instances where a buyer or seller may have deliberate intention to defraud and deceive, but such cases are rare. When trade relations and terms of sale are called into question, it has an unpleasant effect generally for its reflex action is felt more widely than the two parties immediately concerned. Each one tells his friends and thus considerable backbiting and trading follow.

The number of complaints regarding cancellation of contracts or misrepresentation as to grades, color, width, thickness, etc., is gradually disappearing. The number of dealers who are honest and want to do the right thing is increasing, but there is still considerable carelessness in making out contracts or in writing up orders which leads to doubt and misunderstanding. Wholesale lumbermen have to live up to their contracts in both dull and prosperous ones and they naturally expect that retailers will do the same. Many flimsy pretexts can be offered for cancelling an order. An offender may get away with these fictitious reasons a few times but in the long run he becomes recognized and if he was aware how he is regarded by salesmen, he would, think twice before following a course which possibly he may have regarded as clever or shrewd.

The man, who really wants to get out of a contract and goes to the seller and frankly confesses that he can buy cheaper elsewhere and that he does not wish to be forced to honor or accept the order earns, at least, respect for his candor and fairness, which is an asset in all business transactions. He, who puts forward some trivial or spurious plea about terms of payment, shake, stain, moisture, substitution, low grading, etc.,—when such defects do not really occur,—is not one who has the courage of his convictions, and is looked upon as tricky or deceitful.

The dealer who faithfully and loyally carries out his contract, even though at a pecuniary loss to himself, is the gainer in the long run, not only in the matter of earning the goodwill and kindly consideration of those higher up in the trade but in numerous other ways. When conditions are altered, those from whom he buys, are frequently able to be of such assistance, and true friendship and established confidence are attributes more enduring than a mere dollar and cents gain or some temporary advantage.

# How Retailers are "Sizing Up" Spring Trade

"What is doing in the lumber business in your locality?" was the question recently asked of representative retail dealers in various sections of the country. There is no man in the trade who has his ear closer to the ground than the alert yardman in the towns, villages and cities. He comes in contact with all classes of people and is sure to learn the extent of building operations, the ordinary trend of trade, the spread of the home-building idea, the growth of new sections and how the farmers feel in the matter of repairs and alterations.

It is not the intention to dwell at any length upon the situation for the coming season but to let others speak who are very directly in touch with all that is around and about them. Here are a few opinions from representative retailers in widely scattered districts:—

The prospects of building in this district are good and improving all the while.—K. J. Shirton, Dunnville, President of the Ontario Retail Lumber Dealers' Association.

With the mines resuming work and general conditions in all lines improving, we expect a good season.—J. A. Lamberge, Sudbury.

The prospects here are fair. Can speak more definitely a little later.—West & Jackson, Tillsonburg.

Things look bright for spring.—Davis & Doty, Oakville.

So far the outlook is not very encouraging in this locality. Houses which have been built for sale, are not disposed of and buyers do not seem to be in a position to make any worth-while payments. There will be less house-building here than usual.—Reid Bros., Niagara Falls.

The outlook here is fairly good.—B. & N. Planing Mills, Milverton.

Cannot speak definitely at present. Much depends upon the manufacturers stirring up.—O. W. Rice & Co., Welland.

Lumber and building outlook very good.—W. J. Travis & Son, Wyoming.

Everything appears promising.—Elliott Lumber Co., Limited, New Toronto.

Very good, indeed.—McGibbon & Sons, Sarnia.

The lumber outlook is better than for some time with stiffening in prices all along the line.—Charles A. Duff, Renfrew.

## Steady Improvement Since Fall

Everything is going ahead in Listowel and the prospects are bright in the lumber line.—Robert Oliver, Listowel.

We do not anticipate very much improvement in 1923. Quite a large number of vacant houses here. In the matter of new schools and dwellings things have been pretty well taken care of for some time and there may not be many factory additions.—Patterson & Crosthwaite, Hamilton.

Everything looks very well for trade in this section.—P. G. Piggott Lumber Co., Chatham.

At present the outlook is much better and shows a steady improvement since fall and the early part of the winter. Inquiries are coming quite freely for hardwood lumber. I did not intend to buy or cut many logs but now as prices seem to be on the up-grade, I will buy all the logs I can get.—John D. Campbell, Cornwall.

For the coming season the outlook is good. If lumber prices keep stabilized it would give evidence to the trade and ensure a good year's business.—P. W. Gardiner & Son, Galt.

We expect a good season from present outlook.—Ross Taylor & Co., Exeter, Ont.

Our Kitchener office reports prospects good and our Hespler branch as fair. So far as Guelph is concerned, things are looking fairly well.—Robert Stewart Limited, Guelph.

Conditions are looking fairly well here. We expect considerable improvement toward the end of the month.—George Thompson, Cobourg.

Trade is quiet at present. The outlook will be very good if prices do not advance.—D. J. McEachren & Son, Alvinston.

Considerable building will likely commence here as soon as spring opens up. This should help the outlook for the lumber business in this district.—Frank McLean, Brigidon.

The outlook for the lumber business is not very promis-

ing in this section at present but may improve.—Wm. Swan, Bright, Ont.

The lumber horizon is brighter. Our inquiries, particularly for maple and birch, are larger than they have been, and we have been able to get our stocks cleaned up although we have not made shipments of all of it yet. The retail price looks promising for spring unless the advance in spruce holds it up.—A. L. McDermid & Co., Apple Hill.

We are looking forward to a considerable improvement in spring business.—Ingleby-Taylor Co., Limited, Brantford.

## Much Better Than Last Year

Outlook very encouraging, much better than in 1922 which was our smallest year in the retail business since 1917.—A. F. Campbell & Son, Arnprior.

For 1923 the prospects are very good in our locality.—Ball Planing Mill Co., Barrie.

Outlook for business here is good.—A. Coates & Son, Burlington.

Things in this district are looking up.—Fairbank Coal & Lumber Co., Fairbank.

There are some inquiries for material for building and we are looking for a good year as we always do.—Allen Lumber Co., Kingston.

I think the prospects are more favorable for an active and prosperous business than they were in 1922.—George Edgington, Brownsville.

We expect a fairly good spring trade in small owner homes.—Frank A. Bowden & Sons Co., Lansing.

It is a little too early yet for us to speak with respect to business prospects as things do not begin to move until about the middle of March. We hope, however, for a good year.—F. B. VanDusen, Brockville.

Business in this section is quiet but we expect when spring opens up that we will have a bigger turnover than last year.—Wm. A. Nichols, Carleton Place.

Outlook not as good as if lumber prices were stabilized.—Macpherson & Clarke, Glencoe.

Everything looks very bright.—J. Murdock, Durham.

All depends on prices. If they advance much it will tend to kill trade. We rather expect some will try to bring about a runaway market.—Naylor-Osborne Co., Essex.

Fairly good, I should say.—D. Anderson, Dryden.

Prospects improving every day. There will be a limited amount of home-building but very little speculative building. School and church construction quite active.—S. Hadley Lumber Co., Chatham.

## Very Busy in Milling Line

My trade is mill customs sawing. Farmers bring in logs from their wood lots for converting into lumber for their own use. Owing to lots of snow there have been considerably more logs coming in than last year. So far as building is concerned, we think it will be about the same as last year.—A. E. Reesor, Markham.

The outlook is very good, about 25 per cent increase in production over last year in the lumber line, with prices on the up-grade.—Joseph Speers, Burk's Falls.

If spring conditions are favorable to the farmer and prices for agricultural produce advance, we expect a good season.—McLaurin & Sinclair, Vankleek Hill.

There is not a large demand for lumber at the present time, but it is steady.—Berhalter Lumber Co., Thorold.

The outlook in this district is fair so far as construction is concerned.—Zimmerman Bros., Travistock.

Very good business in sight.—Longfield Bros., Mount Brydges.

Many other replies have been received from representative dealers and it is not possible to quote all. The general outlook, however, appears to be that in nearly every centre 1923 trade in the lumber and building line should show an improvement over that of 1922, providing prices do not unduly ascend. Stability in quotations and equalization of consumption and distribution are desirable factors in the lumber arena today.

### Sundridge Girl Carries off First Award

Mildred Gibbon, who won first prize in the recent school competition conducted by the Canadian Forestry Association, lives at Sundridge, in the Parry Sound district. She is eleven years old and attends Hartfell public school, which is five miles from Sundridge where she has lived all her life. Her father is a farmer and works in the winter taking out pulpwood and other timber off his property. Mildred says they have a sugar bush and evaporator that handles the fruit of two thousand trees. She also says that her father came to Sundridge district when it was all bush.

Her essay was as follows:

In speaking of the importance of our forests it is hard to place too much value on our timber. So much of our daily work is connected with timber that it is hard to realize what we would do without it. In the early days here as elsewhere everything was wooden, and in clearing the land the biggest job was to get rid of the timber by fire, or any other way, and no attempt was made to prevent the fire from spreading to the bush and doing a good deal of damage by burning over great tracts of land that have since grown up with berry bushes and trash, spoiling forever the natural beauty of our forests.

My father came over here forty years ago and at that time timber of all kinds was not worth anything only in the way of

Mildred Gibbon, Sundridge, Ont.  
Winner of school essay competition on forest conservation

building and fencing. Fine big pine trees that are nowadays looked on by anyone that may have a few as being a prize were burned in great heaps, also birch, spruce and balsam, also maple and all other kinds of timber that grow here were logged up and burnt and no attempt was made to save or preserve the standing timber. All kinds of timber are looked on as so much money. Those who are looking to the future are not wasting anything in clearing land. What will make logs, are drawn to the mill and sold. The rough wood and limbs are cut into stove and furnace wood and sold in the villages and to the dealers who ship it out to the cities. Then the lumber camps give steady work to an army of men and teams from early fall till the snow is all gone in the spring. All our neighbours for miles around here work in the bush all winter either in camps or taking out pulp wood and stove wood. A great deal of money is brought into the homes that way and we depend entirely on wood to cook our meals and keep us warm. In the early days I have heard my father say that a real dry summer was unknown and it was because of so much green bush around that kept the air moist, but as the clearances got bigger and the bush fires were a yearly occurrence, the ground dried up and the crops suffered for lack of moisture. I think every farm should have a wood plot left or planted. Waste or stoney places should be planted with trees that will grow on that kind of soil and great care should be taken when clearing land so that fire does not get away in the bush and burn in a few days or hours what has taken hundreds of years to grow.

A great many fires are caused in this way, but not all. Tourists and campers are sometimes not as careful as they should be. Camp fires are not carefully put out and matches are thrown away by careless smokers and fires starting destroy hundreds of acres of valuable timber that in a few years grow to a thicket of berry bushes and pin

cherries. Of course these give place to other and more valuable timber in a few years, but nobody, or at least not many, are living today that will earn much money taking out timber or wood from land that has been burnt over and has grown up with second growth timber.

I think that greater care should be taken by everybody and stamp out this enemy of our forests. I must say a word before I get through about one of our best paying side lines to farming, I mean the maple sugar bush. Thousands of gallons of maple syrup are made every year in this part of the country and is sent all over Canada and some is sent to foreign countries and a deal of money is made by those having a good sugar bush. And the best of it is it never wears out but is ready every spring with its crop of syrup and sugar.

### How Fire Fiend Keeps Up His Work

Property to the value of 22 million dollars was destroyed by fire in Ontario during 1922, according to a statement made by Fire Marshall E. P. Heaton to representatives of the Mutual Fire Underwriters' Association recently in Toronto. This tremendous increase over previous years was partly due to the fires in Northern Ontario. There were large increases in barn fires, which numbered 663, and also in fires in dwellings, which totalled 6,000. Fire Marshall Heaton expressed the opinion that the use of soft coal and other substitutes for anthracite had resulted in many fires. Another speaker, Mungo McNab, said that too many barn fires were attributed to spontaneous combustion, which many farmers gave as the cause of a fire which was started by themselves.

### Three Rivers Selected for School

It is understood that Three Rivers, Que., has been chosen for the erection of the pulp and paper school, legislation provision for which was made at the last session of the provincial legislature. Three Rivers is a great pulp and paper centre and the location is regarded as an admirable one from every standpoint. The school will be operated under control of the Provincial Government, but the pulp and paper mill owners will co-operate to a great extent as the institution will supply them with experts within a short time.

The construction of the school will start early this spring and will be completed on time to be in full operation next fall.

The Forestry Educational System in Quebec, which is under the direction of Messrs. Gustave Piche, Chief Forestry Engineer and Mr. Avila Bedard, his assistant, will be a complete one.

At present plans are being prepared to erect the new Forestry School on Ste. Foye Road, retaining its affiliation with Laval University, but being transferred to that point in order to supply greater accommodation.

The complete curriculum of the new system will include study at the forestry school, the pulp and paper school, and practical courses where forest rangers will be able to receive instructions regarding the protection of forests against fires.

The 1923 programme of the Department of Lands and Forests to reduce the losses through forest fire to a minimum has not yet been announced.

The closing of the forests, through the issuance of permits, will, it is stated, be revived this season. Last year the system produced good results.

### Lumber Product Exports From St. John

An interesting statement of the exports of lumber and lumber products to the United States for the twelve months ending December 31st, 1922, as compared with the figures for the previous year has been sent to the "Canada Lumberman" by Edward H. Carter, American Vice-Consul, at St. John, N. B. It will be noticed that 1922 shows a gratifying gain in nearly all items over the returns of 1921.

	1921		1922	
Pulpwood (Rough)			89,977.60	8,825 Cds.
Pulpwood (Rosced)	148,518.00	9,578 Cds.	9,800.00	800 Cds.
Pulpwood (Peeled)			19,842.86	2,241 Cds.
Spruce Piling	3,396.00	1,131 Pcs.	16,472.55	5,490 Pcs.
Cedar Poles	6,010.00	1,724 Pcs.		
Fir Lumber			546.42	9m Ft.
Wood Cross Arms	110.00	100 Pcs.		
Clothes Poles			1,125.00	34m Pcs.
Spruce Spars			500.00	82 Pcs.
Spruce Barrel Staves			267.08	50m Lbs.
Elm Staves			863.28	60m Lbs.
Softwood	1,083,605.58	40,189m Ft.	1,424,517.27	66,750m Ft.
Laths	371,815.00	58,004m Pcs.	895,751.39	135,500m Pcs.
Shingles	12,510.00	2,481m Pcs.	11,382.68	2,347m Pcs.
Hemlock			11,150.56	362½m Ft.
Pine	50,831.17	1,570m Ft.	63,369.41	2,049m Ft.
Hardwood			1,253.31	55½m Ft.
Woodpulp	888,930.00	20,523m Lbs.	1,150,506.24	24,270m Lbs.
			\$2,565,725.75	\$3,697,325.65

## Veteran Official Has Earned Rest

William Douglas, Braeside, Ont.

William Douglas, who recently retired from the position of superintendent of the milling operations of Gillies Bros., Limited, Braeside, Ont., and was honored by a complimentary banquet and presentation at Braeside, has long been an outstanding figure in the lumber line. He has been superannuated by the firm and was presented with a valuable gold watch, suitably inscribed:—"To William Douglas from Gillies Bros., Limited, in appreciation of fifty-six years co-operation, 1866-1922." Mr. Douglas fellow-employees at the same time gave him a smoking set and a gold-headed cane. Numerous friends of the veteran millman will wish him many more years to enjoy the quiet and rest of peaceful old age, Mr. Douglas has always been a faithful, energetic servant, ever loyal to the company's interests and never sparing himself in advancing its welfare. He was stalwart and true and could be counted upon in any emergency, rising from a tail sawyer up through the various grades until he became superintendent of the splendid brick, steel and concrete, electrically-driven mill of Gillies Bros., the only one of its kind in Canada. His long record is one that stands out prominently in an industry which perhaps is characterized by more shifts and removals than many others. Mr. Douglas played his part and did it well and retires in the evening of life, conscious that he rendered good service and that his employers appreciate his effective labor and devotion to duty.

## Converting Waste Material Into Wood Flour

A machine, which is rapidly coming to the front in woodworking plants, planing mills, etc., is the Stroud Air Separation Wood Pulverizer and the All-Metal 100% Efficient Dust Collector. The installation of equipment for converting sawdust, shavings, planer chips and other waste into wood meal and wood flour, is a progressive move. Several new features of the satisfactory disposal of the product are looming up daily. The equipment is made by E. H. Stroud & Co., 928-934 Fullerton Ave., Chicago, and it is announced that the installations are the result of attempts made for years in order to save the numerous materials now being lost.

The Stroud Air Separation Pulverizer is a machine grinding upon the attrition or beating principle, and separates successfully by air. It is pointed out that the pulverizer has no sieves or screens. The bottom of the grinding chamber is closed and there is an air separation chamber above the grinding chamber, and also an exhaust fan on top. The machine receives its raw product through its automatic feeder in pieces of quite large size, if desired, and drives it around and around in its narrow rough grinding chamber with considerable force, making the lumps shatter each other to pieces and reducing them by one quick motion to whatever mesh and fineness may be desired. The coarseness or fineness of the product is regulated by the strength, velocity and expansion of the current of air induced by the exhaust fan and by other ways that the air is used by the machine, which air also delivers the finished product through the fan.

The Stroud Air Separation Pulverizer is for all sizes of dry grindable materials, and for some it carries 6% to 8% or sometimes more moisture, thus often eliminating the use of a dryer.

Wood flour and wood meal are becoming more generally used and form a base for phonograph records, mouldings, oatmeal wall-paper, composition floors, artificial silk, artificial sausage casings, linoleums, terra cotta, porous brick and artificial mosaic flooring, wood fibre plaster, floor sweeping compounds, and many other products.

## Some Lumber Camps Then and Now
